

REPORT

ON THE

ADMINISTRATION OF BENGAL, 1885-86.

Calcutta:

BENGAL SECRETARIAT PRESS.

1887.

PART I.

GENERAL SUMMARY.

ADMINISTRATION OF BENGAL, 1885-86.

SUMMARY.

TOURS OF THE LIEUTENANT-GOVERNOR OF BENGAL DURING 1885-86.

ON 12th May 1885 the Lieutenant-Governor returned to the Presidency from Dárjiling to preside over a Commission appointed by the Government of India to enquire into the state of the defences in the river Húglí and in the port of Calcutta. Accompanied by the members of this Commission, which met for deliberation periodically at Belvedere, the Lieutenant-Governor made a trip down the Húglí in the S.S. *Buckland* and personally inspected the fortifications at Falta and the sites proposed for new forts and defences on both banks of the river.

On 21st May His Honor returned to Dárjiling, where he remained till 16th July, and then came back to Calcutta.

On 11th August Sir Rivers Thompson availed himself of a month's leave of absence granted to him by the Government of India for the benefit of his health, and proceeded on a visit to Ceylon. During his absence the Hon'ble H. A. Cockerell, C.S.I., conducted the administration of Bengal.

On Sir Rivers Thompson's return to Calcutta on 18th September he found it necessary to proceed at once on a river tour in the *Rhostas* through the districts of Bardwán, Krishnagar, and Murshidábád, which at that time were inundated over a large tract of country by the overflow of the Bhágíráthí river through a breach in the Laltikuri embankment at Berhampur. The timely and effectual efforts of the local officers in dealing with this great disaster were witnessed by His Honor, who personally visited in a steam-launch some of the inundated villages. A fund was raised in Calcutta by public subscription to supplement the grants made by the Government to alleviate distress among the part of the population which had lost their food-stores or cattle in the floods.

His Honor reached Dárjiling on 5th October and remained there a month. He then returned to Calcutta, and on 16th November embarked from Diamond Harbour in the British India Steam Navigation Company's S.S. *Madura* for False Point. Here he landed and selected the site of the new buildings for the Port Establishment required to replace those which had been swept away by the cyclonic storm-wave that inundated that part of the Orissa coast in September 1885.

Travelling by the Kendrapará canal, the Lieutenant-Governor went on to Cuttack, and from thence to Purí, visiting *en route* the celebrated Buddhist temples at Bhuvaneswar.

During his five days' stay at Cuttack the Lieutenant-Governor received in public darbár the Rajahs and Chiefs of the Tributary States of Orissa, and on the same occasion presented to the minor Rajah of Purí the sanad of His Excellency the Viceroy and Governor-General in Council, conferring upon him the title and dignity of Rajah Bahadur. The Lieutenant-Governor also took the opportunity of inspecting the High Level Canal.

Embarking at Purí in the India Government S.S. *Undaunted*, the Lieutenant-Governor sailed to the mouth of the Damra river, near which a new light-house is to be constructed, and from there went on to Balasor by the canal. From Balasor His Honor visited Baripáda, the capital of the tributary State of Morbhanj, which is under the administration of the Government during the minority of the present Rajah. His Honor returned to Calcutta by the Coast Canal, arriving there on 5th December.

On 13th February Sir Rivers Thompson left Calcutta on a short visit to Dacca and Maimansingh, where he presided at the ceremony of opening to public traffic the Dacca State Railway. His Honor returned to Calcutta on 18th February.

CHANGES OF ADMINISTRATION.

The period of two years for which the Agricultural Department in Bengal was sanctioned experimentally expired at the end of 1886, and the experience of its working having shown that it was of great use, and even necessary to the administration for settlement purposes, the Lieutenant-Governor, after the close of the year under report, recommended to the Government of India that the Department should be permanently sanctioned.

Rules for the admission of natives of India to the higher grades of the Opium Department by selection were published after the close of the year. A candidate so appointed is considered as a probationer for the first two years of his service before he is finally appointed.

Act VIII of 1885 (the Bengal Tenancy Act) came into operation on the 1st November 1885, and rules under the Act were published in December 1885. A brief account of its working during the five months in which it was in force will be found in the chapter on Land Revenue.

The manufacture and sale of excise salt in Orissa having for some time been on an unsatisfactory footing, the salt administration in that Division has, at the instance of the Government of Madras, and with the approval of the Government of India, been placed under the management of the Commissioner of Salt Revenue, Madras, subject to the control of the Government of Bengal. Considerable improvements in the administration of the salt revenue are expected to result from the change.

The passing of Act III (B.C.) of 1885, which extended Local Self-Government over a large portion of these provinces, caused a considerable number

of local changes of administration. The Act provides for the establishment of District and Local Boards, having extensive powers and duties in regard to roads and communications, hospitals and dispensaries, sanitation, vaccination, famine relief, taking of census, maintenance of staging bungalows, holding of fairs and exhibitions, and other matters of public interest and utility. Powers have also been given to them to construct and maintain tramways, railways, and water-works, and to take charge of, and construct, public buildings on behalf of Government. The rules made under the Act provide for the transfer to the District Boards of the allotments for primary education and scholarships within the area under their control; of the grant-in-aid allotment for certain classes of schools; and of the net grants to all Government schools that are placed under the direct management of the Board.

There were several minor administrative changes in the Emigration and Public Works Departments, which will be found mentioned in the chapters relating to them in the body of this report. • •

On the 21st March 1885 a Commission was appointed to revise the salaries of ministerial officers and to reorganise the system of business in executive offices. It sat during the year 1885-86, but its report was not submitted till August 1886. The recommendations made by it do not therefore fall within the limits of this report.

POLITICAL.

In *Hill Tipperah* the year was healthy and a fairly prosperous one for the people. The cotton crop was injured by rain, but the rice crop was good, while the outturn of oilseeds in the hills was above the average. Owing to a short crop in some parts of the hills, the price of rice rose from Rs. 2-4 to Rs. 2-6 per maund; but this was advantageous to the cultivators of the plains, who generally have a surplus for sale. The wages of labour were very high. Owing to a want of that sense of absolute security which is essential for the growth of a people's welfare and prosperity, there was a marked contrast between the appearance of the British territory and that of the hill territory along their lines of contact, greatly in favour of the former.

The export trade of the country might have been considerably improved if there were greater facilities of communication, and if trade generally were not checked by petty taxes levied by the State, and by rates of export duty frequently charged by farmers without the permission of the administration. Hill Tipperah is naturally rich in many ways, but as regards manufactures the country is poor. This is due partly to poverty and want of enlightenment, but chiefly to want of due encouragement by the administration. Coal-mines have been discovered, and the coal on examination has been found good. Silver has also been found, but the cost of working it was too heavy to be profitable.

The revenue administration of the State continued in its former unsatisfactory condition. The expenditure largely exceeded the income, and the State was embarrassed by a heavy load of debt. The Police Department was in great need of reform, the fees in civil litigation were nearly twice those levied in British territory, and the state of communications continued to be very bad. In the schools the teachers were said to be irregularly paid, and there were no arrangements for inspection. There was no regular postal system, and the

only post-office was attached to the Agency. As regards the large estates of the Maharajah in British territory, the state of affairs was not satisfactory. The relations between the Maharajah's amla and his tenantry in Noákhálí are so strained that the Collector is about to recommend a settlement under section 101 of the Tenancy Act. Matters are not quite so bad in the Tipperah district, but great difficulty is experienced in realising the cesses, and it is proposed to appoint a Cess Collector under section 99 of the Road Cess Act.

Four of the *Tributary States of Orissa* were under direct management, the remainder being administered by their respective Chiefs subject to the general control and supervision of the Superintendent. Taking them as a whole, the rainfall was sufficient and well distributed, except in certain specified tracts, and the crops were good. The winter crops were everywhere satisfactory, and generally the autumn crop was up to the average. The public health was, as a rule, good during the year. Arrangements have been made, as an experimental measure, for the trial of offences committed in the Tributary Maháls within the limits of the Maháls themselves. The execution of civil decrees passed in the States against British subjects resident outside of the States has also been under the consideration of Government. Since the close of the official year the Rajah of Tigariá has died. He was a ruler of the old patriarchal type, and was much liked by the people of the State. No other event of particular interest occurred in the Maháls during the year.

In the *Chutiá Nágpur Tributary Maháls* and political States the rainfall was sufficient, and the crops good in all the States but four. An extension of communications is urgently needed in order to develop these little States. No new roads have been opened, but some important ones passing through certain of the States have been maintained by the Singbhúm Road Cess Committee. The state of affairs in these States was generally satisfactory, the principal exception being Korea.

In the *Chittagong Hill Tracts* two raids were committed during the year, both, it is believed, by certain trans-frontier Kukís. Four Chakmáas were killed and two wounded. Owing to these and previous outrages the villages near the frontier have for some time past been in considerable excitement. The closing of the bazars against the Haulongs, supposed to be concerned in some of the earlier raids, has not had the anticipated effect. The annual darbár and mela at Rángámáti were, owing to the above disturbances, not so successful as usual, and it is proposed in consequence to hold the next darbár at Demágiri.

Nothing occurred worthy of note in connection with the State of *Kuch Behar*. The relations of this State with the Government continued to be most satisfactory.

The question of increasing the allowance given to the Maharajah of *Sikkim* has been under the consideration of Government, but as the Maharajah has not adhered to the terms of the treaty, under which he is to reside in his own country nine months of the year, the question has been dropped.

In consequence of internal dissensions in the State of *Bhután* it was considered advisable to delay, till the cessation of these dissensions, the payment to the Bhután Government of the annual allowance made under existing treaty engagements.

SURVEY.

The most important *survey work* carried on during the year was the experimental survey of pargana Bisára in Muzaffarpur under Chapter X of the Bengal Tenancy Act, and including a record of rights and a settlement of rents. The cadastral survey was conducted by a professional party, and the record of rights and settlement of fair rents by officers acting under the immediate supervision of the Director of the Agricultural Department. The professional party recorded the areas of holdings, facts of undisputed possession, of crops grown, and of irrigation. The maps and measurement records of each village, as they were completed, were made over to the revenue officers, who proceeded to the village and determined and recorded the status and interests of all parties concerned. They also recorded the amounts of existing rents, and settled and recorded fair rents on the application of either landlord or tenant, or otherwise. The total area cadastrally surveyed to the end of June 1886 was 410 square miles. The rents were recorded and the status determined of 15,876 tenants, while fair rents were settled on the application of either landlord or tenant in cases of 3,546 raiyats. Three hundred and twenty-three boundary disputes were amicably settled, and in no case was an appeal made to the Special Judge from the decisions of the Settlement Officer. The total cost of both survey and settlement is estimated at about $8\frac{1}{4}$ annas per acre. The success of the work may be judged by the absence of that friction and those difficulties which were expected in connexion with it. Since the close of the year the orders of the Secretary of State have been received that this experimental survey should for the present be abandoned. The revision of the survey in Midnapur was practically brought to a close during the year. The work consisted chiefly of the measurement and testing of estates imperfectly measured, of the preparation of duplicate copies of settlement records, and of the correction of survey registers. The office of the Junior Superintendent of Survey, was abolished on the 30th June 1886. The demarcation of the boundaries of the Government lands on the sides of the Grand Trunk Road continued, and the work, so far as it related to the district of Huglí, was completed. The survey of ghátwáli lands in Bánkurá was continued on a simpler system. Instead of a cadastral survey showing each ghátwál's holding, the operations were narrowed into a simple demarcation of the external boundaries of the tenures. It is in contemplation to undertake a survey of the town of Calcutta, and a special Act for that purpose has recently been passed.

SETTLEMENTS.

There were 611 *settlements* concluded during the year, of which 154 were original. The revenue assessed was Rs. 2,43,518, being Rs. 56,130 in excess of that previously received. The actual expenditure was Rs. 73,463. In the Bardwán Division the pending settlements refer mostly to *chúkrán* lands in Bardwán and Huglí. The result of litigation with the raiyats of the Majnamuta and Jalamuta estates in the Midnapur district was reported last year. With the view of closing long-pending litigation, it was decided to offer a reduction of three annas in the rupee to the general body of raiyats, and to make this reduction the basis of a final settlement of all matters in dispute. The Majnamuta tenants nearly all agreed to the compromise. In pargana Erinch, however, 103 raiyats have all refused. The cases came on before the District Judge for hearing since

the close of the year, but the result has not yet been reported. The important settlement of Mircha Diár in the Rájsháhí Division was completed. In the Dacca Division 294 petty cases remained for disposal at the end of the year. In the Chittagong Division an inquiry was instituted for the purpose of determining some undecided questions connected with the recent resettlement of the short-term *noábád tálúks* in Chittagong, and more particularly the question whether the *khás taraf tálúks* and the resumed *lákhiráj tálúks* had properly been brought under resettlement. This last question was decided in the affirmative, with the result that nearly five thousand additional tálúks became open to resettlement, and the necessary orders were accordingly passed. In the Orissa Division the Khurdhá settlement, which had long been practically finished, still required a considerable amount of miscellaneous work before the completion report can be submitted. In the Chutiá Nágpur Division the settlement of the estates of Kharakdiha and Chai in the Hazáribágh district was still pending.

GOVERNMENT ESTATES.

The number of Government estates under *management* was 3,159, of which 2,950 were the actual property of Government and 209 were private estates managed by Government. The total demand from estates belonging to Government was Rs. 31,93,925, and the percentage of collections 65·82, as compared with 67·91 of last year. For 1,315 estates directly managed there was a gross demand of Rs. 38,67,663 and a current demand of Rs. 27,63,045. The percentage of collections on the former was 69·2, and on the latter 96·9. The results were not very successful in comparison with those of other years, but nevertheless the net income was larger than could have been obtained had the estates been farmed out. The falling off has been general in the Bardwán Division, but principally in connexion with the Majnamuta and Jalamuta estates. In the Presidency Division the falling off was about 12 per cent. on the current demand. In the Rájsháhí, Dacca, and Chittagong Divisions the percentages of collections on the current demand increased by 16, 10, and 8 respectively. In the Patná Division the percentage of collections on the current demand was about the same as last year, short collections being attributed to pending litigation and to a failure of the *rabi* crop in part of Sháhábád. In Orissa the collections were 92·7 on the current demand, against 111·4 in 1884-85 and 63·5 in 1883-84.

During the year the sum of Rs. 51,753 was spent on the *improvement* of Government estates. The principal improvements were the excavation of tanks, sinking of wells, drainage, irrigation, embankments, and similar works. The Agricultural Department gave an impetus to the cultivation of new staples in Government estates. In the Government estates of Sháhábád the experimental cultivation of wheat on scientific principles was conducted with success. Similar results attended experiments in the cultivation of peas, wheat, *masuri*, and potato in Bardwán. In some parts of the country the use of the Bihiyá sugar-mill is increasing, and there is a hopeful tendency in some places to accept improved ploughs constructed on a cheap pattern.

WARDS' ESTATES.

The decrease in the *number* of wards' and attached estates was continued during the year, the former numbering 97,—less by 10, and the latter 79,—less by 11, than the preceding year. The annual *rent demand* was Rs 93,42,744,

and the collections amounted to Rs 87,77,439, or 93·9 per cent. This percentage was rather better than in either of the two preceding years. In three of the estates there were short collections owing to the introduction of the new forms of receipt under the Bengal Tenancy Act. In two of these there were heavy unrealisable balances; and where this fact and the results of particular suits indicate that the raiyats challenge with effect the validity of the rent-roll, the introduction of the new forms of receipt on which the annual rent has to be specified must bring disputes to an issue, with the ultimate effect of putting an end to a state of things which can only be regarded as intolerable.

The total cost of *management* was 7·9 per cent. on the current rent and cess demand. Rs. 58,430, subscriptions and donations, were spent on schools and Rs. 33,007 on dispensaries.

No new *surveys* on a large scale were undertaken during the year, but the expediency of now commencing them on certain estates has been under discussion since the close of the year.

Considerable *distress* was occasioned in several portions of the country to tenants of wards' estates by the inundation of September 1885. In the Kanika estate in Orissa great damage and loss of life occurred through the cyclone of 22nd September. The condition of other districts which did not suffer from special causes was generally prosperous.

The reports of the progress in *education* made by the wards are in general satisfactory. The principal exception is in the case of three wards in the Orissa Division.

COURSE OF LEGISLATION.

Two Acts, viz. an Act to further amend the Village Chaukidári Act, and an Act to amend Act II (B.C.) of 1866 and the Calcutta Police Act, became law; and four Bills—one to amend the Bengal Vaccination Act; the second, to amend the Act providing for the periodical inspection of steam-boilers and prime-movers attached thereto in the town and suburbs of Calcutta and in Howrah; the third, to consolidate and amend the law relating to kánúngos and patwáris; and the fourth, to provide for the registration of permanent tenures—were under consideration.

The object of the Act to amend the Village Chaukidári Act was to introduce a better system of appointing pancháyats, and to secure the more certain and punctual payment of chaukidárs. The Act provides for the selection of pancháyats by a magisterial officer on the spot, and fixes three years as the term for which the appointment shall be held. It is further provided that they shall pay in their collections to the Magistrate, and in case they find themselves unable to realise the chaukidári assessment, power is given them to appoint a tahsildár, whose salary will be collected from the defaulting villages. The object of the other Act which became law was to enable the Calcutta and Suburban Police to arrest without a warrant drunken persons guilty of riotous or indecent behaviour in the public streets and persons committing offences against public decency.

The object of the Bill to amend the Bengal Vaccination Act was to extend its benefits to immigrants and temporary sojourners, by permitting notices to be served on parents requiring them to have children vaccinated, by authorising the Health Officer to require any unprotected person on any vessel arriving in the port of Calcutta with small-pox on board to be vaccinated, and by affording the Health Officer greater facilities for ascertaining whether persons are protected or not. This Bill was passed on the 10th April 1886. The Bill to amend the law regarding steam-boilers and prime-movers was recast in Select Committee, which struck out all words which referred to the inspection of prime-movers. It also was passed on the 10th April 1886. The Bill relating to kánúngos and patwáris was before the Select Committee during the year, and no report was presented during the session. The Bill providing for the registration of permanent tenures had been in 1884 referred to a Select Committee. In April 1886 the preliminary report of the Select Committee was presented and ordered to be published in the *Calcutta Gazette*.

In addition to the above, a Bill to consolidate and amend the law relating to the municipal affairs of the town and suburbs of Calcutta was introduced and read in Council on the 10th April 1886. It will form the subject of remarks in next year's report.

POLICE.

Excluding the Chittagong Hill Tracts, the total *sanctioned police force* consisted of 72 superior officers, 3,428 subordinate officers, and 19,594 constables, but the actual strength was somewhat less. The actual *expenditure* amounted to Rs. 41,95,793, and the cost of the force employed on purely police work was about Rs. 26,22,486, or 7·6 pies per head of population. Taking the province as a whole, there was one policeman to every 3,123 persons, the police force being lightest in Behar, where the proportion was 1 to 3,778, and heaviest in Orissa, where it was 1 to 2,672. Besides this force, there was a force of 170,097 men employed as town and *village police* not subject to the general rules. The average annual emolument of each of these is estimated at Rs. 31-8. There having been complaints that these chaukidárs were not regularly paid, and that the pancháyats kept no regular accounts, a draft Bill was under the consideration of Government during the year; and ultimately it was resolved to give the present system a further trial, but to pass an amending Act providing for a better system of appointment of pancháyats, and for the more punctual payment of the salaries of the chaukidárs. The Bill became law as Act I (B.C.) of 1886 since the conclusion of the year under report. During the year the police on the Eastern Railway districts were organised under an Assistant Inspector-General, and on the Tirhút and Bengal and North-Western lines under the Assistant Inspector-General, East Indian Railway. The system of restricting the police to the duties of detecting and preventing crime and keeping order, watch and ward being provided for by the railway authorities, as on the East Indian Railway, was considerably extended during the year under report. *Punitive police* were quartered in only three places in Bákarganj. The police maintained order among about four and three quarter millions of people at 172 *fairs*. The *casualties* among the police increased from 2,971 to 3,224. There were more retirements, resignations,

and discharges, but fewer dismissals. The police service is not so popular as it used to be when the work was lighter; and in some of the eastern districts it is practically impossible to keep the force up to its full strength. The number of judicial and departmental *punishments* of police-officers considerably decreased; and judging from figures, their conduct appears to be improving. At the close of the year 10,570 men wore good-conduct stripes, and during the year money rewards were received by 1,657 officers and men. There were four cases of torture well established against the police, in three of which adequate punishments were inflicted. The number was less than in the preceding year, but it is plain that the practice still continues, and can only be eradicated by the continuance of severe measures.

In *crime cognizable* by the police there was a decrease in offences of from 112,365 to 107,410. Considerably more than one-half of the decrease occurred in cases relating to nuisances and the salt and excise laws. The percentage of *cases declared false* decreased from 6·3 to 6·0; but there can be no doubt that the actual percentage of false cases is very much higher. Out of 6,462 of these cases, prosecutions were instituted in only 1,404 cases and convictions obtained in only 353. The difficulties experienced in obtaining a conviction against a person who brings a false case are so great that very few prosecutions are instituted. As remarked in the previous year's report, there have as yet been no signs that the moral sense of the mass of the people on this subject is on the side of the law; and until this be the case, there is little hope of the crime being extirpated. Reported serious *offences against the person* decreased from 5,140 to 4,944, but the number of persons convicted rose from 2,709 to 2,745. There was an increase in the number of cases of murder and of abduction. In the Patná Division, where the population is poverty-stricken and extremely dense, the exposure of infants continued to be unusually prevalent. There were 21,103 cases of serious *offences against person and property*—a number slightly less than in the previous year. There was an increase of 11 in the percentage of these cases which ended in convictions. Probably, but for a certain amount of agricultural distress in the spring, the figures for these offences would have been lower. *Dakaitis* continued exceptionally numerous, being one more than last year. The Divisions in which this crime was most prevalent were Rájsháhí, Bardwán, and Chutiá Nágpur. The number of persons convicted against whom *previous convictions* were proved increased from 1,482 to 1,577. The increase, being accompanied by a decrease in cognizable crime, is satisfactory. The Maghiya Dom settlements in Sáran and Champáran have continued to prosper. The Sáran Doms are found most difficult to reclaim, but nevertheless a marked improvement is noticed in the cultivation of their lands. Seven hundred and fifty persons, or 1 to every 54,515 of the population, were called upon to find *security for their good behaviour*. *Non-cognizable offences* decreased from 107,368 to 105,996. The reduction occurred in offences against public justice, cheating, and in cases connected with special laws, such as those referring to municipalities, salt, and pounds. The amount of *property stolen* increased from Rs. 9,92,560 to Rs. 10,30,005, and the property recovered from Rs. 2,67,092 to Rs. 3,00,158. The worst results were in Maimansingh and Rangpur, where the amount recovered was as low as 11·8 and 14·9 per cent. respectively of the amount stolen. Deaths by *suicide* increased from 2,531 to 2,712, and cases of *accidental death* from 26,903 to 31,317, of which 13,622 were caused by drowning.

The police force in the *Chittagong Hill Tracts* consisted of a District and Assistant Superintendents, and of 539 frontier and 108 civil police. The total cost of the force was Rs. 2,18,969, against Rs. 1,92,291 in the previous year. There were 53 cognizable cases, against 33 in the previous year, while there was a large decrease of from 532 to 65 cases in non-cognizable crime. The police at the northern post were most effectively employed as patrols instead of being placed at outposts.

The total cost of the police in the *town of Calcutta* increased from Rs. 4,28,783 to Rs. 4,59,344, of which Rs. 2,89,290 was paid by the Municipality, Rs. 1,00,149 by Government, and Rs. 69,905 from fees and fines. The increase in cost was principally due to the appointment of new mounted police. The number of up-country men in the force was 1,899, and of Bengalis 219. Bengali recruits will not come forward for enlistment owing to dislike to the discipline enforced, coupled with the fatigue and exposure which the duties entail. The mortality in the force was only 9·13 per thousand, but it is said that many others go home sick and die in their own country. Sickness is caused by exposure at night in malarious localities, and a large number of young up-country men break down every year before they become acclimatised. The number of persons arrested or summoned in the town and suburbs fell from 54,888 to 46,781, and the cases also fell from 51,588 to 47,771. In the town the cognizable cases fell from 17,204 to 14,786. The principal decrease was in street offences, which fell by nearly two thousand. There was also a considerable decrease in serious offences, both against the person and against property. In the suburbs cognizable cases slightly increased in number, but the majority were very petty. With regard to non-cognizable crime in town and suburbs since the conclusion of the year, the Calcutta Police Act has been amended so as to allow the police to arrest persons committing certain street offences. It is hoped that these hitherto non-cognizable offences will now be reduced to a minimum. In one case a European constable and a native shopkeeper extorted Rs. 1,000 from a European shopkeeper, and were convicted. In the town previous convictions were proved against 280 habitual offenders, and 128 notorious criminals were photographed. Great attention was paid to the registration of old offenders, and endeavours were made to keep habitual criminals under surveillance. Thirty-nine *fires* broke out in the town, suburbs, Howrah, and in the 24-Parganas, destroying property to the value of Rs. 99,254, against Rs. 5,60,348 in the previous year. None of them was attended by any loss of human life. The fire-brigade rendered assistance at all of them. There were 54 cases of *suicide* in the town and suburbs, and 247 *accidental deaths*. Seventeen of the latter were caused by street vehicles; and taking into consideration the incompetency and carelessness of native drivers, and the narrowness of the most crowded thoroughfares, it is surprising that carriage accidents are not more frequent. There was an increase in the *transport of arms and ammunition* to Bengal frontier districts and the North-Western Provinces owing to rumours of impending disturbances on the Afghan frontier.

The total number recorded of persons killed by *wild animals and venomous snakes* was 11,823, and higher than in any of the preceding four years: 10,112 deaths resulted from snake-bite. The increase is generally attributed to improved registration, but in the Rájsháhí Division and some of the districts of the

Bhagalpur Division the heavy rains flooded the low lands and compelled the snakes to seek shelter in and around human dwellings. The total number of cattle killed fell from 12,397 to 12,223. In Maldah, especially, there was a decrease owing to a large number of leopards and tigers having been killed by native hunters. The number of wild animals destroyed was 5,932, and of venomous snakes 53,995. The amount paid in rewards was Rs. 29,884, of which Rs. 20,145 were paid for the destruction of wild animals.

CRIMINAL JUSTICE.

No change was made in the system of *administration* of criminal justice during the year 1885. The number of Stipendiary Magistrates at the Presidency remained the same, but the number of Honorary Magistrates in the town of Calcutta rose from 92 in 1884 to 103 in 1885. The number of Mufassil Benches was increased by two. In the interior there were altogether 30 Sessions Judges and 390 Stipendiary and 1,511 Honorary Magistrates.

Before the *High Court* 141 persons came to trial, and of these 93 were convicted, 31 being sentenced to death. In its appellate jurisdiction the Court decided 2,826 cases on appeal, reference, or revision.

Before *Courts of Session* in their original jurisdiction 3,271 persons were under trial, of whom 1,510 were convicted. Courts of Session sentenced 49 persons to death and 181 to transportation. There were 348 trials by juries, in 66 of which the Judge wholly or partially disagreed with the jury. In 26 cases only did he disagree so completely with the verdicts as to consider it necessary for the ends of justice to submit the matter to the High Court as a court of reference. In 25 of these cases heard by the High Court the verdicts were set aside in 18 cases, new trials were ordered in 3 cases, and in the remaining 4 cases the verdict was accepted. There was an increase of from 8,296 to 9,067 in the number of persons who appealed to the Court of Session. The original sentence was modified or reversed in the case of 2,556 persons.

In the Courts of *Magistrates* other than those at the Presidency 177,795 persons were brought to trial, of whom 104,419 were convicted and 3,061 committed. The Presidency Magistrates dealt with 39,113 persons, of whom 34,753 were convicted and 45 committed. Altogether fifty nine juveniles were sentenced to detention in a reformatory school.

There were 242 *European British subjects*, involved in 216 cases, brought to trial, of whom 189 were convicted. Three cases were tried by native Magistrates. The offences with which they were charged were mostly breaches of special and local laws and offences against the peace.

The statistics of offences and offenders are noticed under the head of Police. There were 1,965 *persons whipped* under judicial orders, being 138 more than in 1884. In more than 85 per cent. of these cases was the punishment inflicted for theft. The total number of *witnesses* who attended the different courts during the year was 422,629.

PRISONS.

The general system of prison administration remained unaltered during the year 1885. The number of prisoners admitted was almost exactly the same as in the previous year, but there was a small increase in the daily average prison population. The difference is said to be due to the fact that scarcity prevailed for some part of the year in certain districts, and led to an increase of petty crime. The general health of the prisoners was worse, and the number and percentage of deaths were higher than in 1884. In some jails in unhealthy districts the death-rate continued very high. Offences against prison discipline were fewer than in the preceding year. There was a diminution in the severer form of punishment for jail offences, viz. sentences of flogging, reduced diet, and solitary confinement. A rise in the price of provisions and a larger expenditure on clothing caused an increase in the cost, exclusive of expenditure on buildings, of jail administration. The average net cash earnings of the prisoners employed on jail manufactures increased considerably. No alteration was made in the system of jail manufactures and in the employment of prisoners.

The *number of prisoners* in jail at the end of 1885 was 15,076, against 15,354 in 1884. Of these, 121 were convicts from Burmah, whose conduct has been good, and whose work is highly spoken of. The number of prisoners admitted during the year was 80,853, as against 80,852 in the previous year. The daily average of prison population rose from 15,101 to 15,177, which was due to an increase in the number of sentences of six months' imprisonment and upwards. The percentage of prisoners confined in central jails was 55·96, as compared with 54·36 in 1884. This is due to an increase in the number of long-term prisoners.

Offences against prison discipline diminished from 56,564 to 48,789. The main decrease was in the Alipur Jail, which has been only working half time owing to the depression in the jute trade; and from this cause alone there were 4,891 less offences relating to work. There was also a decrease under the head of smoking or possessing forbidden articles, due to the stoppage of building work, in which free artisans came into contact with the prisoners. Flogging was inflicted in only 347 cases. This was only 3 per mille of the prison population. In the English convict prisons the proportion is 9·8. Sentences of reduced diet have been discouraged, and show a large decrease. The number of prisoners discharged under the *mark system* decreased from 1,665 to 1,565. This result is due to the fact that the system has been more carefully worked, and that the number of prisoners to whom it is applicable has decreased. All jails, except the Alipur Jail, at which there is a military guard, are now guarded by *warders*. A special allowance was sanctioned for warders in unpopular districts, and since then there has been a decided improvement in the guards, and there is no want of recruits. There continues to be a steady decrease in the number of *escapes*. Altogether 14 convicted prisoners escaped, and of these all but 3 were recaptured.

The total *expenditure*, exclusive of the amount spent by the Public Works Department, was Rs. 11,16,423, being higher than in any year since 1880 and Rs. 59,933 more than in 1884. The principal items of increase were diet, establishment, hospital charges, clothing, and contingencies. The average cost

of each prisoner rose from Rs. 69-15-4 to Rs. 73-9-0. The charges for diet increased owing to several causes. There was a larger number of prisoners to be fed, the price of the principal articles of diet was higher, and there was an increase of sickness during the year, and hence many prisoners, though not actually in hospital, were given extra diet. Charges for transfers of officers were heavier owing to various causes. The increase under the head of clothing was to a small extent due to the provision of warm *junghees* for weak prisoners in unhealthy jails. The net cash *earnings* rose from Rs. 2,86,517 to Rs. 3,65,202. The average number of prisoners employed on *manufactures* decreased from 6,478·18 to 6,340·96. The most successful jails for manufactures were the Presidency Jail, the Central Jail at Baxár, and (among district jails) that at Dárjiling.

The *subsidiary jails* continued to be under the direct management of subdivisional officers, with Civil Hospital Assistants as Deputy Superintendents. The total number of prisoners admitted was 28,011, against 28,625 in 1884, the daily average number being 728. Of convicts, 11,120 were admitted.

The *general health* of prisoners in the jails during the year was worse than in 1884. The death-rate per mille rose from 49·7 to 59·2, which was largely due to the excessive prevalence of cholera in several districts. Of those who died, 31·99 per cent. were admitted in indifferent health and 30·14 in bad health. In unhealthy districts, as might be expected, the death-rate was extremely high; but this was also the case in Hazáribágh, where there was a severe outbreak of cholera, and at Monghyr due to accidental circumstances. In seven jails the death-rate from all causes exceeded 100 per mille. Even allowing for the bad health of the prisoners on admission, the death-rate is still very high, and the Government looks rather to the unremitting watchfulness and care on the part of jail officials in carrying out the various arrangements for the well-being of the prisoners than to any improvements in jail buildings for a reduction in the mortality.

At the Alípur *Reformatory School* the number of boys at the close of the year 1885 was 108. The cost of maintenance per head fell from Rs. 140-9 to Rs. 128-12-4. From reports received concerning the conduct of the boys after release, it appears that on the whole the discipline and training undergone in the institution are productive of satisfactory results. At the Hazáribágh Reformatory there were at the close of the year 194 boys. The total expenditure was Rs. 21,798, as against Rs. 11,930 in 1884. The principal increase in expenditure was in the item of building. The released boys are nearly all leading honest lives. The health at the Alípur school was excellent during the year. At Hazáribágh there were four deaths, two being due to the epidemic of cholera already referred to.

CIVIL JUSTICE.

There were 1,331 suits for disposal on the *Original Side of the High Court* during 1885, and the Court disposed of 878. There was a great improvement both in the number and in the proportion of suits disposed of to the total number before the Court, compared with the work in 1884. There were 453 suits pending at the close of the year, against 844 in 1884. On the *Appellate Side* the High Court sat for 242 days and disposed of 7,457 appeals and

applications; the number of these, and their proportion to the whole number before the Court, being much greater than in the preceding year. The number pending at the end of the year was 3,267, against 4,983 at the end of 1884. The proportion of work undisposed of was 30 per cent. of the whole work of the Appellate Side.

In the *Courts in the interior* the original civil suits instituted numbered 453,281, of which 238,066 were suits for money and 177,847 were under the rent law. Out of 467,188 cases disposed of no less than 377,178 were in Munsiffs' Courts. There was a considerable increment in institutions, which occurred almost entirely in suits for money, for rent, and for specific relief. In the case of suits for immovable property there was a considerable decline.

In the *Calcutta Court of Small Causes* the suits instituted decreased from 31,074 to 30,644. A considerable portion of the decrease is, however, merely nominal, and due to an alteration in the system of registration. The rest of the fall occurred in suits of nearly all values, and does not call for special remark. Out of a total of 33,666 cases for disposal, the number pending at the close of the year was only 2,664. The gross receipts amounted to Rs. 3,08,321, and the expenditure to Rs. 2,08,892, being a decrease of about Rs. 16,000 and Rs. 3,000 respectively from the figures for the previous year.

In the *Mufassil Small Cause Courts* the institutions increased from 53,887 to 56,214. The increase was most marked in the courts near the metropolis and in the districts of Húgli and Jessor.

There were, in the year 1885-86, 1,008 appeals and original *suits to which Government was a party*. Of these, 86½ per cent. were decided in favour of Government, as against 75 per cent. in 1884-85. The total value of the cases in which decisions were given adverse to Government fell from Rs. 6,19,974 to Rs. 4,78,645. Nearly half of this is the value of land acquisition suits. The amount of decrees in favour of Government under realisation during the year was Rs. 6,26,182, against Rs. 6,42,647 in the previous year. Omitting the Canning decrees, amounting to Rs. 5,81,279, which were remitted during the year, the amount under realisation was Rs. 44,903, and the amount realised Rs. 12,338. There were 1,113 cases decided in favour of, and 158 against, the *Court of Wards*, while 44 were compromised or withdrawn. The amount under realisation under decrees in favour of the Court was Rs. 9,37,524, and the amount realised Rs. 1,69,179. There has been a large increase in the number of these cases, due to the fact that several important estates have lately come under the Court of Wards.

REGISTRATION.

The operations of the Registration Department were again greatly developed during the year 1885-86. The total registrations increased from 688,380 to 723,901. There has been, almost without exception, a general and steady increase in all classes of documents. Compulsory registrations affecting immovable property increased by 3·01 per cent., optional registrations of the same kind by 9·06 per cent., and other registrations by 5·54 per cent. A marked and satisfactory feature of the year's operations was the increase in the total number of optional registrations. They numbered 46·67 per cent. of the whole number, and, compared with the figures for the preceding year, rose by

7·72 per cent. It is probable that optional registrations will, owing to a decision of the Calcutta High Court on section 54 of the Transfer of Property Act, 1882, and to the operations of the Bengal Tenancy Act, show a still further increase.

Of the documents registered, 597,416 related to *immovable property*. Of these 274,275 were *leases*. As in previous years, the grant of perpetual leases, of which 87,236 were registered, was almost entirely confined to Bengal. Term-leases registered increased from 175,045 to 180,939. Of these 136,258 were registered in Bengal Proper. Behar, however, took the first place as regards registration of large values, the average value of each lease being Rs. 119·55, against Rs. 39·86 in Bengal. Leases for one year and under increased from 5,363 to 6,100. The proportion of leases to counterparts registered again fell, this time from 26·83 to 24·92 per cent. The decrease is accounted for by the fact that the raiyat has to pay the cost of both documents, by the unwillingness of the zamíndárs to bind themselves in writing, their unwillingness to attend at registration offices, and their wish to prevent the raiyat from using the lease as a valuable security for the purpose of raising money.

Registrations of *deeds of sale of immovable property* of the value of Rs. 100 and upwards showed a small increase. Those for the sale of immovable property of less value increased from 115,540 to 120,381. The increase is probably due rather to a greater appreciation of the benefits of registration than to pressing necessity or agricultural depression. Registrations of *deeds of mortgage* of immovable property of Rs. 100 and upwards in value increased by 6·46 per cent., and it is noticeable that in those districts in which a large number of sales of this class of property occurred a large number of these mortgages were also registered. Registrations of deeds of mortgage of smaller values increased by 16·89 per cent. From the returns made out as to the classes of persons to whom transfers of immovable property were made, it appears that zamíndárs were the largest buyers of shares in entire revenue-paying estates, raiyats in the case of revenue-free properties, and small tálúkdárs and tenure-holders in the case of intermediate tenures. About half the purchasers of raiyati holdings at fixed rates were raiyats, while in 58,787 transactions regarding raiyati holdings with rights of occupancy 38,919 raiyats were the buyers. The figures show clearly that the agricultural classes are not parting with their interests in the soil, and that maháján and money-lending purchasers are not so numerous as is sometimes alleged.

Out of 124,699 instruments relating to *movable property* 89,501 were money *bonds*, against 85,459 in 1884-85. No satisfactory explanation is given for the increase, nor for the fact that as many as 30,533, or more than one-third of the whole, were registered in Jessor alone.

Three new rural *sub-registry offices* were opened during the year, and 29 sub-registry offices at subdivisional head-quarters were converted into rural offices.

The total *receipts* for the year rose from Rs. 10,74,501 to Rs. 10,88,177, the *expenditure* from Rs. 5,54,110 to Rs. 5,68,365, and the surplus consequently fell to Rs. 5,19,812, or Rs. 579 less than last year. The actual net balance, deducting payments by transfer, was, however, Rs. 4,50,651, against Rs. 4,49,100 of the previous year.

Rs. 29,06,498 expended on the Kidderpur Dock-works. The total income under Revenue accounts was Rs. 25,86,136, against Rs. 26,28,319 in 1884-85. The total expenditure was Rs. 27,31,612, and after including the credit balance of the previous year the net credit balance of 1885-86 was Rs. 3,94,620. The Capital account shows an income of Rs. 22,49,479, after deducting last year's deficit, and an expenditure of Rs. 21,22,977 which was spent on new works. The principal items of expenditure were for vessels for the Port approaches, for the Tea warehouse at Armenian Ghát, for the Petroleum wharf at Baj-Baj, for a new cargo-boat for the 30-ton crane, for payment of claims for the Howrah Foreshore Road land, for two new jetties and a landing stage, for an anchor-vessel, a light-vessel, and a dredger. Rs. 13,46,854 were spent on the new dock-works at Kidderpur. Besides minor operations, the river was surveyed from Calcutta to Chandarnagar (Chandernagore). The damage caused to the lighthouse at False Point by the cyclone has been completely repaired. The petroleum wharf and dépôt at Baj-Baj were completed, and were opened for traffic in July 1886.

The operations at *Chittagong* and at the *Orissa ports* were of minor importance. At the former there was a considerable decrease in the number of vessels trading with the United Kingdom and those employed in the Náráinganj trade. At False Point the construction of new buildings in place of those washed away by the storm-wave was commenced, and the harbour was resurveyed.

METEOROLOGY.

The *system* of meteorological observations established in 1883-84 for the extension and development of provincial meteorological reports has been steadily followed. The only change of importance which took place was the reduction of certain second-class observatories to the category of third-class ones. The third-class observatories at Tezpur in Assam and at Maldah and Krishnagar in Bengal, the establishment of which was sanctioned last year, were started during the year under report, and a voluntary observatory at Bánkura also commenced sending observations during the year. The readings recorded at the 21 imperial and at the 25 provincial third-class observatories were found to be generally trustworthy, and the instruments when inspected were generally found in good order. The earthquake of July 1885 caused considerable damage to instruments at some of the Northern Bengal stations. The receipts from subscriptions for weather reports of the Bay of Bengal covered the cost of printing and distribution.

The *south-west monsoon* was a week later in establishing itself than in 1884. The winds advanced over East and North Bengal with, in many cases, excessive rain on the 7th and 8th of June, and gave the first heavy rain to Behar and Orissa on the 16th and 17th of the month. In July the current continued fairly strong, giving rain in excess in North Bengal and Behar and a defective fall in Orissa. A great increase in the strength of the monsoon took place in August and September, and over the greater part of the province greatly excessive rainfall was registered during that period.

There were a number of smaller *cyclonic storms* during the year, and one small but very violent cyclone, which crossed the Orissa coast on the

morning of the 22nd September. The centre passed over False Point at about 6-30 a.m., and by its violence, and by the severe storm-wave by which it was accompanied, did much damage and caused great loss of life, which are described more fully in the next section.

ECONOMIC CONDITION OF THE PEOPLE.

In the cold weather of 1884-85 there was more or less cause for anxiety on account of existing or apprehended *scarcity* of food owing to crop failures in various localities of the western portion of these Provinces. By degrees, however, the area calling for special care or attention from Government narrowed down, and in May 1885, so far as the effects of the monsoon of 1884 were concerned, only in the Patná and Bardwán Divisions did any reason for anxiety continue to exist. The anxiety in regard to the affected tracts in the Patná Division was always of a mitigated character, and more in the nature of apprehensions for the future than of concern regarding existing distress. But over about 1,000 square miles in the Bānkurá, Bardwán, and Bírbrhúm districts, in which there had been crop failure more or less pronounced for two successive years, serious distress, necessitating the establishment of systematic relief operations, became apparent in the spring. Even in these last districts, however, the supply of food was always plentiful in the markets, and at prices which can hardly be said to have touched famine rates. The classes who stood in need of relief were the beggars and others who in ordinary times subsist on the charity of their neighbours, and day-labourers, and the difficulty lay in the fact that the failure in the local crops restricted the labour market and forced on Government the necessity of providing employment for those whose circumstances prevented them from emigrating in search of work. In the administration of all measures of relief the provisions of the Provisional Famine Code were rigorously adhered to, and it is gratifying to be able to record that the success of the relief operations in this Division in the prevention of mortality from want of food was complete. From 1st April to December 1885 the total cost of relief to Government was Rs. 1,96,000.

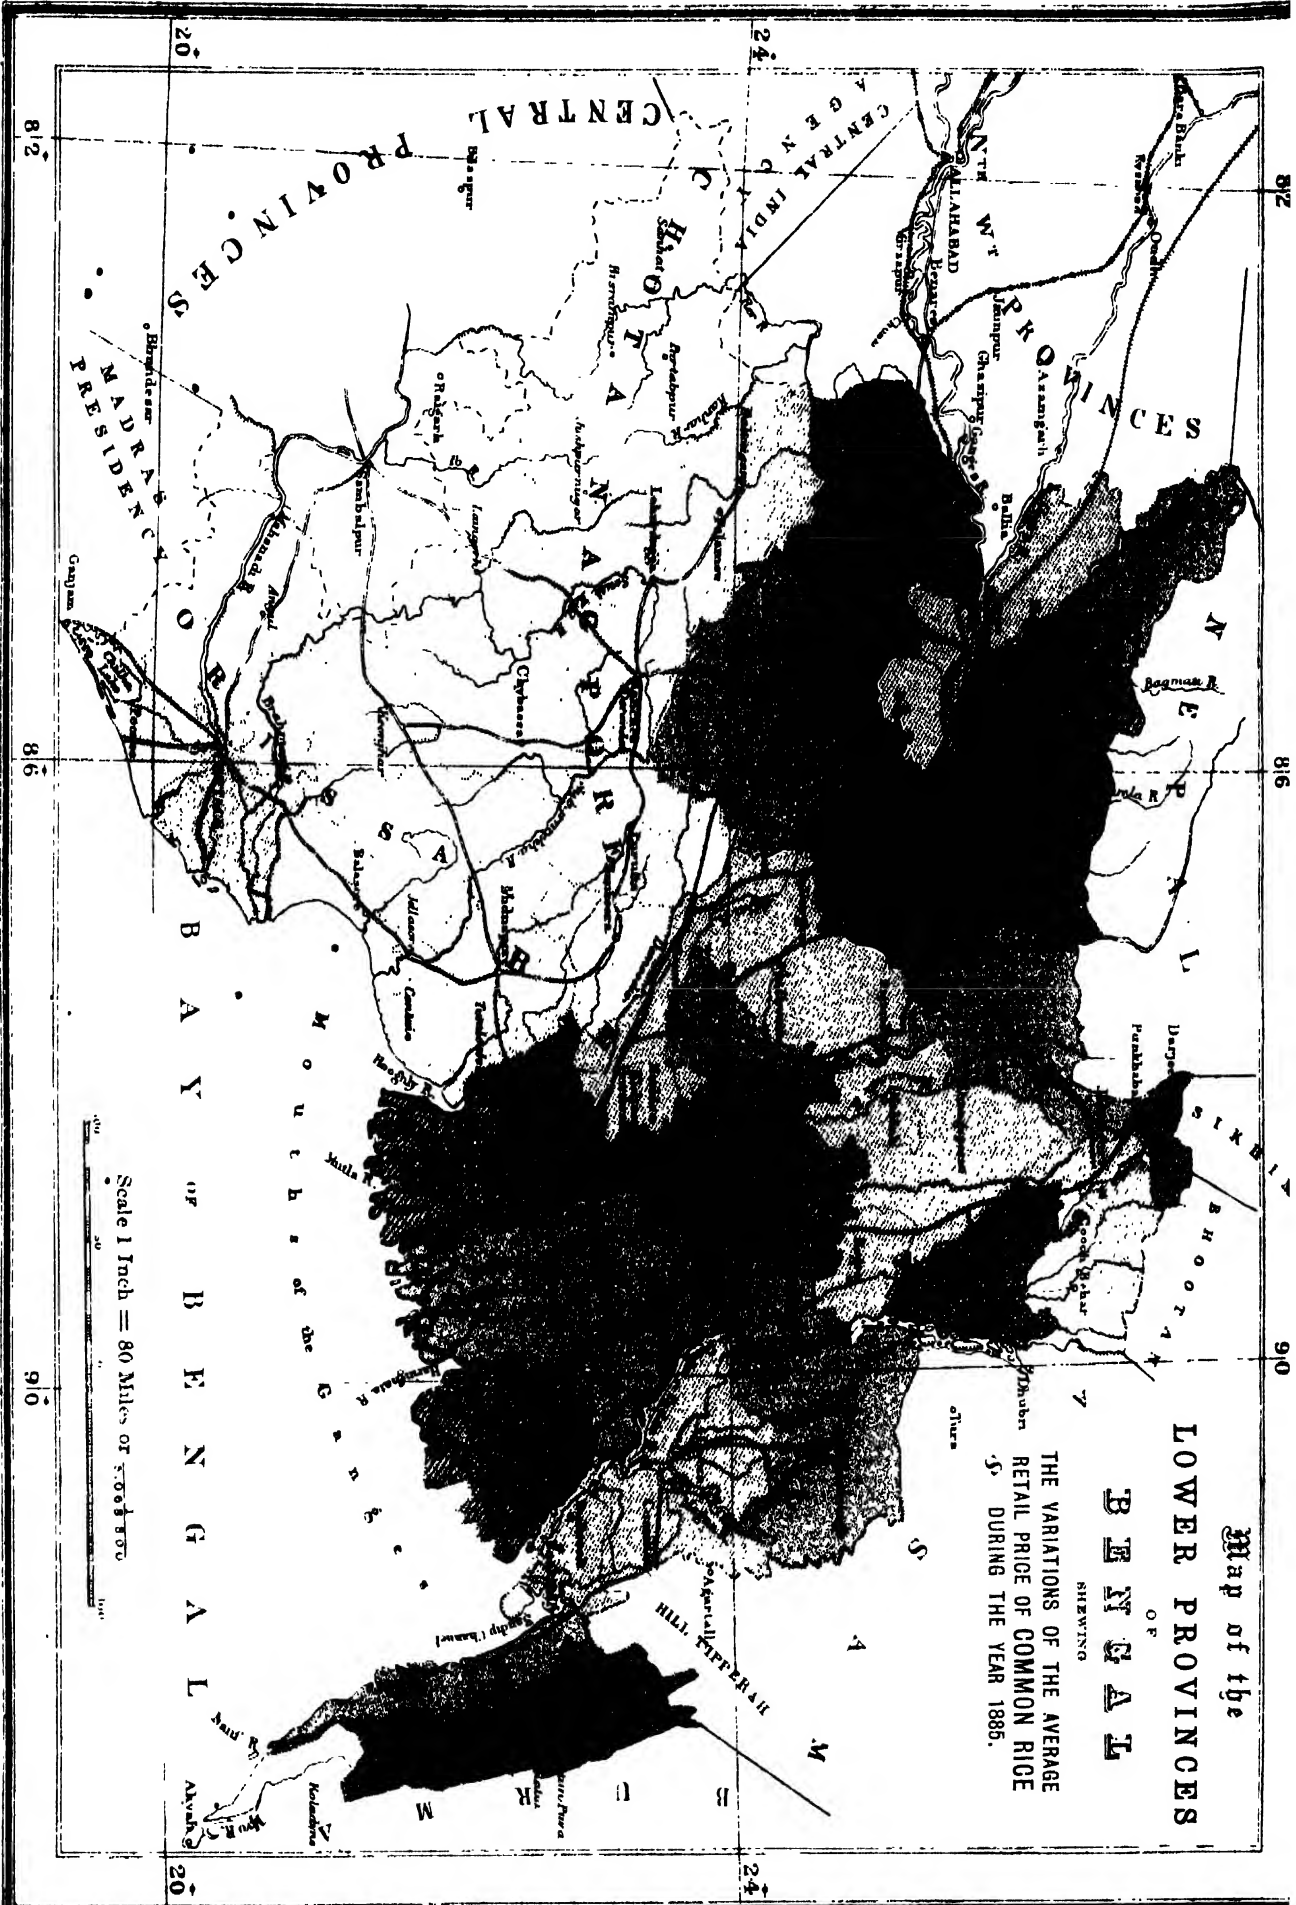

The excessive rainfall of August and September 1885 caused extensive *floods* in South-West and Central Bengal and in parts of the Bhagalpur Division. The Ganges, and the great rivers into which it divides as it passes through Central Bengal, rose to unusual heights and spilled in destructive floods over the surrounding country. The districts which suffered most were Murshidábád and Nadiyá. In the former no less than 1,250 square miles, or more than one-half of the total district area, were under water. In the latter district nearly 2,200 square miles were inundated. Though much temporary hardship and discomfort were caused by these floods, the floods did little or no permanent harm, and, in fact, ensured to the cultivators for the next few years crops far more abundant than those they lost. For the relief of immediate distress, relief circles were formed in the affected areas, and a central committee was formed in Calcutta to collect subscriptions and organise relief for those forms of distress with which Government agency could not adequately cope. The committee received Rs. 65,665 in subscriptions, and expended Rs. 37,000 in the relief of distress. The balance has been invested so as to form a nucleus of a distress fund to be applied promptly on the occurrence of future calamities by famine or inundation in these Provinces.

A great disaster overtook the province of Orissa in the *storm-wave* which submerged a portion of the coast of the Cuttack district at the mouth of the Mahánadi river on the 22nd September 1885. At 6-20 a.m. on that date a sea-wave 15 feet in height broke over False Point. Two hundred and fifty square miles were submerged by it in its course; 11 villages were completely swept away, every man, woman, and child in them being drowned at the same time; 150 more villages were entirely levelled, and their crops completely destroyed, but a considerable portion of their population escaped. It is estimated that altogether about 5,000 persons were drowned by the storm-wave. Immediately after the disaster, the Government officials visited the devastated country and distributed food to the survivors. At the beginning of the relief operations as many as 8,000 persons daily were in receipt of charity. The villages which were not utterly destroyed recovered from the effects of the storm with remarkable rapidity, and within a short time few vestiges of its destructive character remained. In the Balasor district much less damage was done by the storm-wave, which was stopped by the embankment of the sea-coast canal, which thus saved hundreds of square miles of country from being submerged by salt water.

It will thus have been seen that, though the year was one of calamities, they were all local in their effects. With these exceptions the *general condition of the people* was good, the crops were (with the exception of jute) above the average, and the prices of labour were either stationary or showing a tendency to rise. In only four districts (excluding the town of Calcutta) was the average retail price of common rice during 1885 less than 13 sers per rupee, while in twenty-eight districts it was more than 15 sers per rupee. Even in the districts of Bardwán, Bánkurá, and Bírbhúm, which were most affected by failure of crops, the average prices were 16 sers 4 chhatáks, 18 sers 1 chhaták, and 15 sers 4 chhatáks respectively per rupee. The annexed map shows the average retail prices of common rice throughout the province, the darkest colour showing where it was dearest.

AGRICULTURE AND HORTICULTURE.

The *Botanical Gardens* at Calcutta kept up their general appearance in a very satisfactory manner. The show of orchids was excellent. The river frontage, which had suffered from erosion, was protected by a facing of broken brick metal. A large quantity of mahogany seeds was received from Kew and Jamaica, and about 20,000 seedlings were successfully obtained. A year's further experience shows that the paper mulberry tree (which supplies the material from which the *tappa* cloth of Polynesia and the bulk of the paper of China and Japan are manufactured) finds a congenial soil in Bengal. The bark of this plant is one of the best of paper fibres. A machine has been patented for the utilisation of the fibre of the common plantain for paper-making. The herbarium attached to the garden received material additions during the year. The *Lloyd Botanical Gardens* at Dárjiling were reported to be recovering from the ravages of the cockchafer grubs, and the landslips from the Sanitarium Hill, which used to cause much damage, have ceased. An *exhibition of silk cocoons* was held at Rámpur Beaulah in January 1886. It is reported to have fostered a spirit of emulation among the cocoon-rearers by bringing together cocoons of the various silk-producing tracts.

 RETAIL PRICE OF COMMON RICE
 DURING THE YEAR 1885.

The *Agricultural Department* did much useful work during the year, encouraging exhibitions and improved methods of cultivation. Its principal duty, however, has been the supervision of the experimental survey of pargana Bisára in the district of Muzaffarpur, which is described in the section of this summary dealing with Survey. In this branch of work continuous employment will be found for the Department in the Government and wards' estates.

FORESTS.

The *area* of reserved, protected, and district forests under the Forest Department, in addition to 149,328 acres of proposed reserves, was 7,183,388 acres. The greater part of the forests are in the Sundarbans and the Chittagong Hill Tracts. There are also important areas in Dárjiling, Jalpáiguri, Chutiá Nágpur, and Orissa. Information has for the first time been collected during the year under review regarding the length of the boundaries of all Bengal forests except those of Orissa: 912 miles of boundaries were re-cleared, and 203 miles newly demarcated. Something was done towards the provision of detailed *working plans* for all forests, but progress was hampered owing to want of establishment. Since the close of the year a special division for this purpose has been created. The list of the Bengal *controlling staff* continued to be combined with that of Assam during the year under review, but since the commencement of the current year a separation has been mutually agreed upon and carried out. Of 1,363 cases of *breaches of forest laws*, 739 were compounded, against 800 out of 1,243 in the preceding year.

The forests specially protected from *fire* were 829,253 acres in area, against 806,209 last year. The additional areas taken in hand were in the Angul and Singbhúm forests, where great difficulties were experienced. In the latter only 20,900 acres were saved out of 101,120 specially protected, but the whole of the non-protected area (233,480 acres) was burnt. In Angul 106,614 acres out of 179,200 were successfully protected. In other forests the measures taken for protection were unusually successful. Excluding Singbhúm, only 667 acres out of an area of 2,119,390 acres, in which no special protective measures were taken, suffered from fire.

To the *plantations* 146 acres were added. In the Baxá and Chittagong Divisions mahogany was found to germinate freely. In the latter Division also divi-devi and paper mulberry seedlings were successfully planted out. There were 36 lines of new roads opened, and 191 existing lines repaired.

The *yield* of the forests was in timber 6,539,578 and in fuel 18,803,054 cubic feet. There was a total increase of 3,338,743 under both heads over the figures for the previous year. The increase is due to a greater demand, and also to the failure of an opposition raised by the firewood merchants of Calcutta to prepayment for produce. The *receipts* rose from Rs. 5,71,152 to Rs. 5,97,432, while the *expenditure* fell from Rs. 4,11,915 to Rs. 3,70,399, leaving a net surplus of Rs. 2,27,033.

MANUFACTURES AND MINES.

With regard to *indigo*, the actual outturn of 1884-85 fell short of the estimate, but it is believed that the outturn for 1885-86 greatly exceeded that of the previous year. The quantity exported during 1885-86 was 76,109 cwt.,

showing a decline of $28\frac{1}{2}$ per cent., and the figures are the lowest since 1879-80 ; but the quality of the crop and the prices were considerably better than last year. There has been a corresponding falling off in shipments to each of the consuming countries except in the case of Russia, for which the exports rose from 2,101 to 2,550 chests. The principal decrease has been in exports to the United Kingdom, but all the East Indian indigo has gone into consumption, and the position of the dye is now said to be very strong. Large shipments still continue direct to America and Germany, and with rapidly increasing population and in absence of competition from other dyes, the consumption of indigo in the United States should continue to advance.

The total number of *tea* gardens known to exist in the year 1885 was 369, and the area under plant in the 359 which furnished returns was 63,489 acres, with an outturn of 14,049,681lb. Compared with the returns for the year 1884, there was an increase of 23 in the number of gardens, of 7,790 acres in the area under tea, and of 2,309,391lb in the total yield. The year was a favourable one for the tea industry, and the average yield per acre varied from 158 $\frac{1}{2}$ lb in Dacca to 424lb in Jalpáigurí. The average for the province was 312lb per acre, against 281lb in the preceding year. The average price, 10 annas 9 pic per pound, was a great improvement over the 8 annas 9 pies per pound of the preceding year. In the Chittagong Division the industry is now on a sound footing. In the Chittagong Hill Tracts the outturn increased from 14,977lb to 22,127lb, and in the Chutiá Nágpur Division it was 23,962 $\frac{1}{2}$ lb more than last year. The season was generally good, and favourable rates were obtained in the market. In the Dacca Division the area under tea remained the same, but the outturn increased by 25 per cent. In the Rájsháhí Division the season was a good one, and better prices were obtained than last year. In Jalpáigurí the number of gardens increased by 17, and the total outturn by 910,115lb. When the survey of tea lands, which is now being conducted, reaches the fertile part of the unreserved forests, there will probably be a still further extension of cultivation.

The results obtained at the only *coffee* plantation in Lohárdagá were disappointing. The average yield per acre fell from 51.2lb to 30.7lb. In the Chittagong Hill Tracts three-fourths of an acre yielded 330lb.

To the *cinchona* plantations 187,000 plants of the hybrid variety and 239,000 of *Calisaya Ledgeriana* were added. The planting out was confined to yellow bark trees, no red bark having been put out anywhere. There are now over five millions of trees of various ages in the plantation. The crop of the year was not large, having amounted to 205,410lb of dry bark. The expenditure on the plantation amounted to Rs. 79,728. The demand for the febrifuge was considerably less than in previous years. The outturn from the factory, which is regulated by the demand, accordingly fell from 6,464lb to 4,743lb. Owing to the smaller quantity manufactured, the cost of manufacture per pound was slightly increased. The decline in the issues is due to the presence at the depôts at Calcutta, Madras, and Bombay of 7,000lb of London-made febrifuge sent out for sale under instructions from the Secretary of State, and also to the low price at which quinine is now obtainable in the market. The revenue derived from the sale of the febrifuge amounted to Rs. 93,476, and the actual profit to Rs. 30,220 ; but in addition to this there

was a large saving in expense to Government medical institutions through the substitution of febrifuge for quinine.

The manufactures and mines of the various Divisions of these Provinces are described in the body of this report.

SEA-BORNE TRADE.

The total value of the sea-borne trade of the Bengal Presidency, exclusive of Government transactions, declined from Rs. 70,21,51,840 to Rs. 68,72,16,029. Imports, both foreign and coasting, fell from Rs. 30,28,51,914 to Rs. 27,87,05,795. Exports show a slight increase of from Rs. 39,92,99,926 to Rs. 40,85,10,234, the increase being observable both in foreign and in coasting trade.

The value of the imports of the foreign trade of *Calcutta* declined from Rs. 24,07,73,371 to Rs. 22,59,51,097. The principal decrease was in cotton goods, both in piece-goods and in twist and yarn, metals, machinery and mill-work, mineral oils, and corals. On the other hand, the imports of malt liquors and spirits show a marked increase; while the import of tea has increased 122 per cent., though the quantity imported is still far below the average importations of the years 1881-82 to 1883-84. The imports of gold fell from Rs. 77,76,316 to Rs. 49,35,489, or 36 per cent. The exports, on the other hand, rose from Rs. 2,000 to Rs. 7,04,055. The value of exports from the port declined from Rs. 32,15,49,602 to Rs. 32,14,62,739. The principal articles of export are—opium, jute, raw and manufactured, tea, grain and pulse, oilseeds, hides and skins, indigo, cotton, and silk. Of these the value of the jute exported declined by more than twenty-three lakhs of rupees in value, which is due to the short crops of last year. Indigo also shows a falling off of 15 per cent. on the value of the quantity exported. On the other hand, rice, tea, hides and skins, show a large increase. The heavy decline in the wheat trade noticed in last year's report has been followed by an advance of over 63 per cent. The figures are, however, still much below the average of the past four years. The heavy fall in the export of refined sugar, also noticed last year, continued. The figures are 4,229 cwt., against 12,852 cwt. in 1884-85 and 159,996 cwt. in 1883-84.

The total value of the foreign trade of *Chittagong* has further fallen off from Rs. 83,10,652 to Rs. 82,94,672. So also the total value of the trade of *Orissa ports* shows a decrease of 9.2 per cent. In the foreign trade of Balasor and Cuttack an improvement is observed, but the trade of the port of Purí was in a languishing state during the year. The total value of the trade of the small port of *Naráinganj* considerably diminished during the same period.

INTERNAL TRADE.

The registration of internal traffic was carried on under the existing system with no important modification. The collection of statistics of the internal trade of the province was limited to the registration of the traffic of the ports of Calcutta, Chittagong, and Orissa, and of that carried along the railways and the chief water-ways of the province. As regards the interprovincial road and river traffic, registration at the Karamuása bridge in the Sháhábád district

was commenced in December 1884; and sufficient information having been collected in respect thereof, the registering station was abolished from 1st October 1886. A registering station was in the same month opened at Sherghát in the Gayá district with the view of obtaining data for railway extension. Regarding the river-borne trade between Bengal and the North-Western Provinces the registration at Ballia on the Ganges was discontinued from August 1886, but the Gogra-borne traffic, which is much larger than that on the Ganges, will continue to be registered at Maniár till March 1887. Registration of the boat traffic between Bengal and Assam is carried on under orders of the Chief Commissioner of Assam at Bhairab Bazár and Dhubrí.

The value of *goods imported* into *Calcutta* increased from Rs. 63,34,98,462 to Rs. 63,51,22,714, those imported by the East Indian Railway having risen by nearly a kror of rupees. The value of goods imported by country boats was something over 10 kros, being an increase of $8\frac{1}{2}$ lákhs over the figures for the previous year. Goods imported by inland steamers increased by 6 lákhs; by the Eastern Bengal Railway by nearly 24 lákhs; while that by road decreased by one kror $13\frac{1}{2}$ lákhs of rupees. The total quantity of all imports also increased by $20\frac{1}{2}$ lákhs of maunds. The value of the *exports from Calcutta* increased by 6 lákhs of rupees, but the quantity decreased by $8\frac{1}{2}$ lákhs of maunds.

The quantity of *raw cotton* imported and exported showed a considerable rise. The consignments from the North-Western Provinces were 1,56,121 maunds more than in the previous year. The cotton crop there had suffered from rain in 1884 and 1885; but the drought during the latter part of 1885 did much to improve its quality, and in many cotton districts, although the crop was not heavier, still it was much finer than in the year 1884. There was a decrease of about $6\frac{1}{2}$ per cent. in the imports of European *twist and yarn*, and of about $11\frac{1}{2}$ in those of the Indian article. The exports, however, showed a considerable increase in both kinds of about $10\frac{1}{2}$ per cent. The clearances of European *piece-goods* show a decline of about $1\frac{1}{2}$ per cent. as compared with 1884-85, but of $4\frac{1}{2}$ as compared with 1883-84; while the exports show a decrease in value of Rs. 85,24,355, but an increase in quantity of 7.21 per cent. owing to the comparative cheapness of Manchester goods. Imports of Indian piece-goods show a falling off of 10.77 per cent., but in the export trade there was an increase of 8.64 per cent. The supply of *indigo* carried to Calcutta was 33.25 per cent. below the figures for 1884-85, and the exports also show a decrease of 28.76 per cent. The quantity of *raw jute* carried to Calcutta was 5.92 per cent. below the trade of 1884-85, but 15.20 per cent. in excess of that of 1883-84. The export trade shows with the same comparisons a decrease of 7 and an increase of $12\frac{1}{2}$ per cent. respectively. *Gunny-bags* show an increase of 13.36 per cent. in imports and a slight decrease in exports. The comparatively plentiful harvests of the year resulted in a general increase in the *food-grain* traffic, but it still shows a considerable falling off when compared with 1883-84. Two kros and 54 lákhs of maunds were imported into Calcutta, as against 2 kros 21 lákhs in 1884-85. So also the exports increased from 1 kror 56 lákhs to 1 kror 83 lákhs. Of the staple food-grains, the only two which show a falling off in price were wheat and the lesser millets, the decrease being 7.75 per cent. in the case of the former and 1.08 per cent. in that of the latter. Under barley the average rise in price was 12.89 per cent., under the best sort of rice 20.08 per cent., and under common rice 20.46 per cent. The imports of wheat rose by more than

53 per cent. owing to a brisk demand for export by sea. The exports, too, rose by nearly 62 per cent., but they were still 44·33 per cent. below those of 1883-84. The total imports were nearly 72 lákhs, and the exports 58 lákhs of maunds. The import of gram and pulse advanced 4·54 per cent. owing to a demand for export to Madras and other ports. The exports were almost equal to those of 1884-85, but they exceeded those of 1883-84 by 2,86,222 maunds, or 22·75 per cent. Under rice and paddy the imports were 1 krór 40 lákhs of maunds, against 1 krór and 30 lákhs in 1884-85. Similarly, the exports increased from one krór to one krór and five lákhs of maunds. In the import trade of the miscellaneous spring and rain crops there was a decrease of 5·15, and in the export trade of 45·53 per cent.; but in both cases there was still a large increase over the figures for 1883-84. The trade in *hides* shows an increase of 1·77 per cent. in the imports and of 4·47 in the exports as compared with 1884-85. As compared with 1883-84, the increases were 24·45 and 17 per cent. respectively. The quantity of foreign *salt* imported diminished from about 90 lákhs to 87 lákhs of maunds, while the importation of indigenous salt was only 332 maunds. The exports of salt from Calcutta decreased from 83½ lákhs to 82½ lákhs of maunds. So also *saltpetre* showed a decline both in its imports and in its exports. The trade in *linseed* shows a considerable increase, the advance being 27·39 per cent. in the imports and 25·64 per cent. in the exports. On the other hand, imports of *mustard seed* decreased from 38 lákhs of maunds to 30½ lákhs, and exports from 30 lákhs to 20½. The *silk* trade also showed a decline of 18·66 per cent. in the imports and of 15·08 per cent. in the exports. In the *sugar* trade there was hardly any fluctuation except in the case of imports of undrained sugar (*gur*), which decreased by 6·12 per cent. *Tea* shows an increase of 12·19 per cent. in the imports and of 7·25 per cent. in the exports. *Tobacco* also showed a considerable increase under both heads.

The total value of the inland *trade* of the port of *Chittagong* again showed a large development, the amount being nearly 34 lákhs of maunds, against 26 lákhs in 1884-85. The trade in raw cotton, gunny-bags, rice, and paddy showed the principal increase, there being a decline in lime and limestone, caoutchouc, cotton twist, piece-goods, jute, and salt. Country boats *via* the Megna river carried to and from Chittagong 21,63,143 maunds of the value of Rs. 59,92,618.

The total quantity and value of the *traffic* carried *on the Nadiya rivers* showed a falling off. The decline in quantity was 9·04 per cent. It was principally due to the floods, during the height of which through traffic was practically stopped.

Traffic on the Midnapur and Hijili Canals increased somewhat in quantity, but showed a diminution in value. There was a large increase of 7,17,550 maunds of paddy carried on them. Traffic on the Orissa Canals also showed a considerable decline in value. A portion of the Orissa Coast Canal was opened for trade in July 1885, and it carried 3,65,388 maunds, valued at Rs. 8,14,561.

The traffic carried by *inland steamers* on the Brahmaputra and Upper Megna again showed a large increase. The river steamer companies carried 7 lákhs of maunds, and those of the Eastern Bengal Railway 2 lákhs of maunds more than in the preceding year. Of goods carried by *country boats* between Assam and Bengal, 71½ lákhs of maunds, of the value of more than 1 krór 82 lákhs of rupees, were registered. The imports from Assam consisted chiefly of lime

unhusked rice, and oranges ; the exports, of cottons, pulses, oils, salt, sugar, spices, and cocoanuts.

The gross traffic of Bengal with other provinces carried by *rail* increased from 2 krons and 9½ lákhs to 2 krons and 90½ lákhs of maunds. The imports increased by 44·35 per cent., and amongst these, those into Calcutta show the enormous rise of 52·33 per cent. The exports increased by 25·53 per cent. The principal items of increase amongst the imports were raw cotton, cotton twist, manufactured fibres, wheat, rice, gram and other food-grains, liquors, copper, oils, opium, and ghí, and amongst the exports, coal, cotton twist, Indian piece-goods, dyes, manufactured fibres, food-grains, and ghí. In Bengal itself the net traffic increased from 4 krons 40½ lákhs to 4 krons 67½ lákhs of maunds. On the State railways the traffic increased from 2 krons 59½ lákhs to 2 krons 99½ lákhs of maunds. On the Eastern Bengal Railway alone the increase was 18 lákhs of maunds : on all the other State railways, except the Patná-Gayá line, there was also an increase.

The system of registering the trade of these provinces with Nepal, Sikkim, and Bhutan remained substantially unchanged during the year.

The total value of the trade was more than 1 kror and 59 lákhs of rupees, and showed an increase of 7·11 per cent. The trade with *Nepal* amounted to 1 kror and 45 lákhs of rupees, being an increase of 5 lákhs. The principal articles imported were—cattle, fibres, vegetables, rice and paddy, other rain crops, hides, opium, ghí, saltpetre, linseed, mustard seed, spices, timber, and silver ; and amongst those exported may be mentioned piece-goods, vegetables, metals, salt, spices, sugar, tobacco, and manufactured wool. The principal items amongst the imports from *Sikkim* were ponies, musk and yak tails ; and amongst the exports to that country, horses, ponies, and mules, and piece-goods. There was an increase in all these articles except musk. The total trade increased from 5 lákhs 80 thousand to nearly 11 lákhs 70 thousand rupees. Trade with *Bhutan* has suffered owing to the late commotions in that State, but with the establishment of a settled Government a revival of trade may be hoped for. The principal decline was in the trade in horses, woollen stuffs, madder, vegetables, caoutchouc, ghí, and musk amongst the imports, and in tobacco, sugar, piece-goods, rice, and paddy amongst the exports.

ROADS AND BUILDINGS.

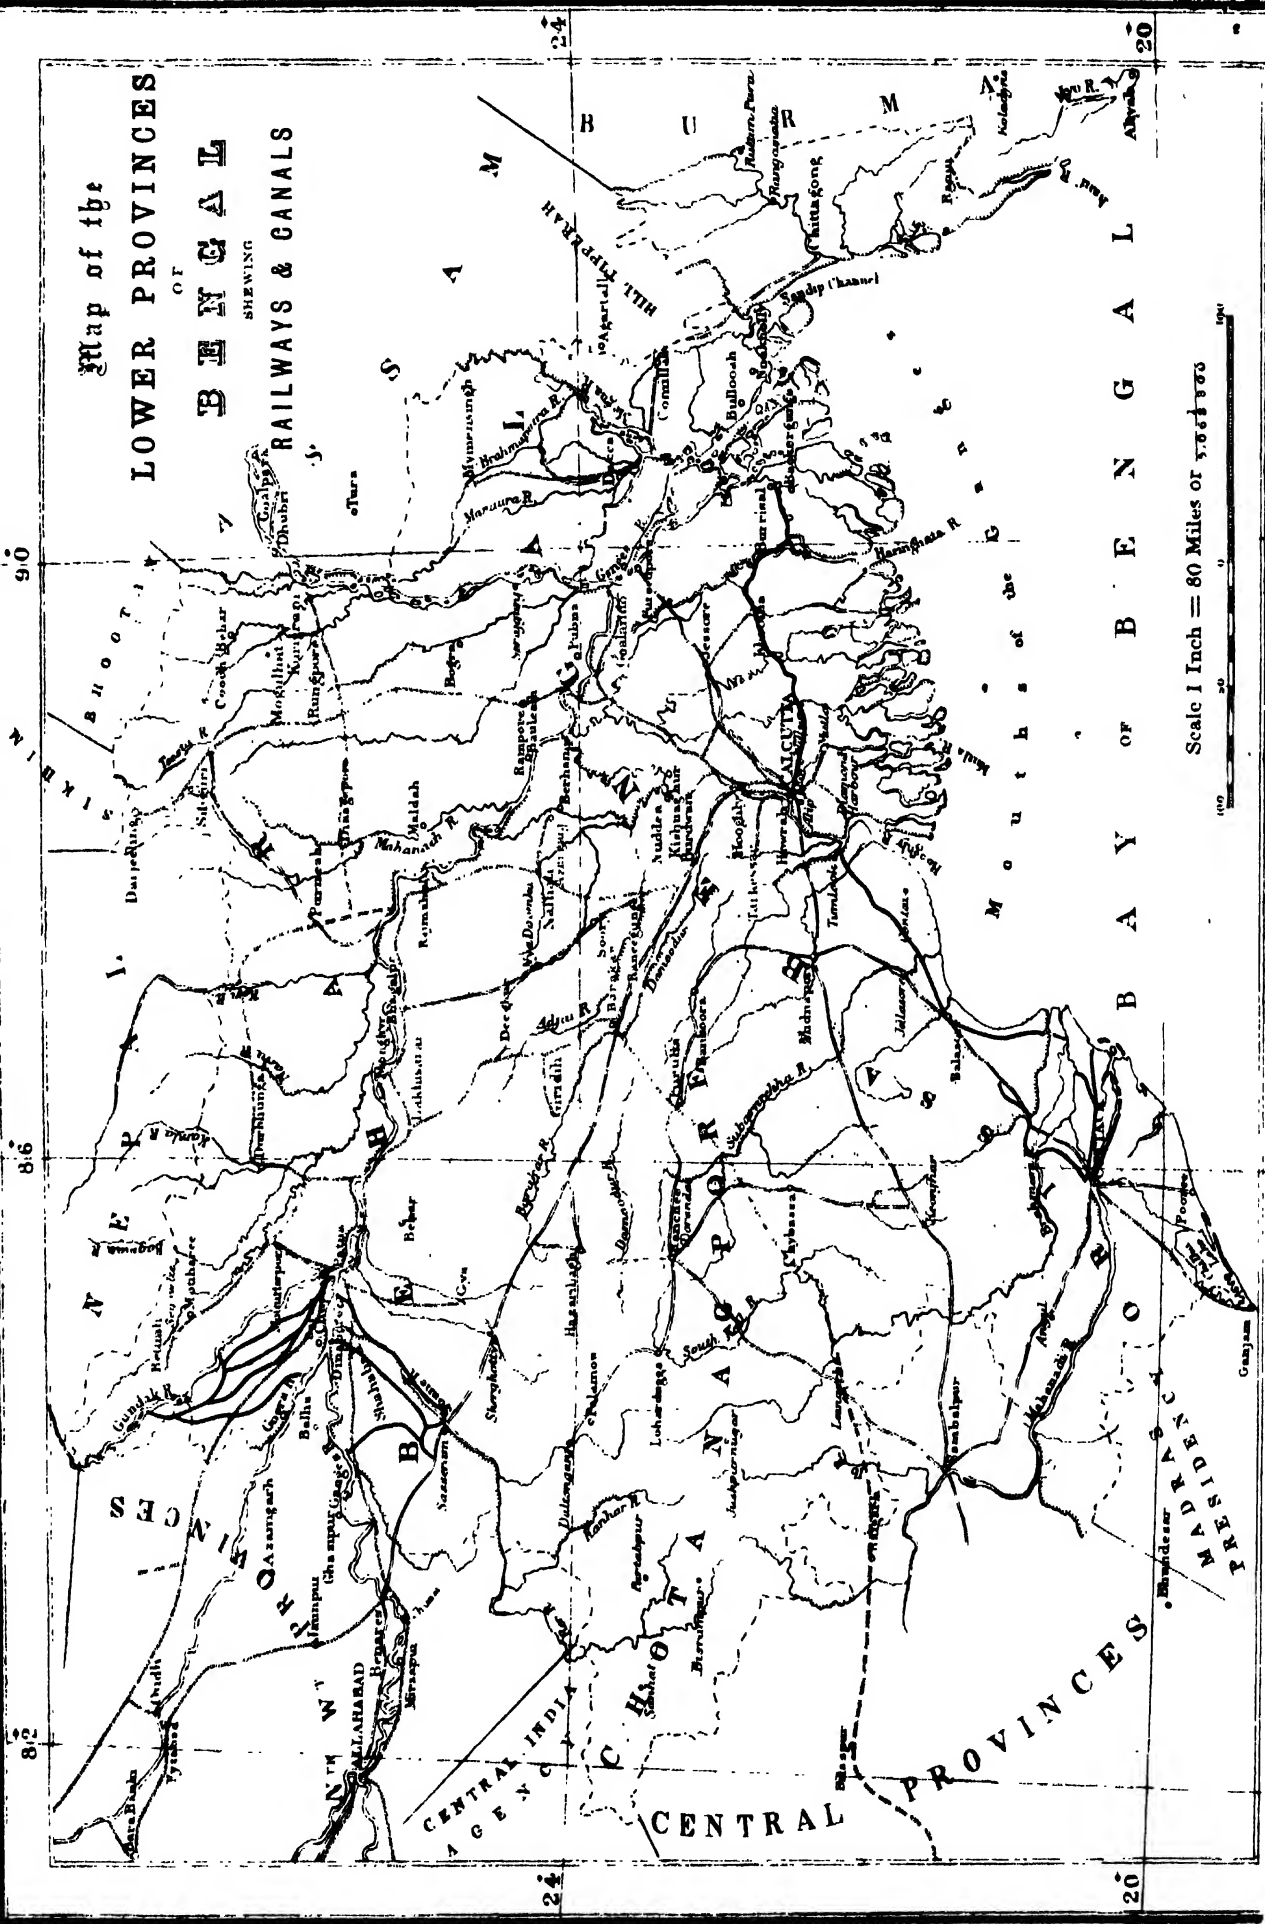

There was a considerable reduction of expenditure on *Imperial* services during the year. Under this head only Rs. 23,696 were spent on military, and Rs. 5,83,575 on civil works. The corresponding figures for last year were Rs. 1,53,465 and Rs. 11,62,082 respectively. The chief Imperial work completed was the office for the Director-General of Post-offices.

The total *Provincial* outlay amounted to Rs. 27,26,652, or almost the same as last year. The principal buildings completed were the Jessor Collee-torate, the Secretariat offices, and the “Shrubbery” at Dárjiling. The Judge’s court-houses at Maimansingh, Farídpur, and Pabná were under construction. For the Police Department a new District Superintendent’s office was built at Barísal. A portion of the Chemical Laboratory in the Medical College was converted into a lecture theatre, and good progress was made in the new building for the

Map of the LOWER PROVINCES OF BENGALEE RAILWAYS & CANALS

Motihárf school. For the Medical Department a laboratory for microscopic investigations was built in the compound of the General Hospital, Calcutta, and half the buildings of the Swarnamayi Hostel for lady medical students were completed. Amongst improvements in communications may be noted the Son causeway, the works on which were continued, and which was expected to be completed during 1886-87. An iron girder bridge was erected on the Ganges-Dárijling Road, and the consolidation of metal on the first section outwards of the Ránchi-Hazáribágh Road was finished. Fair progress was made with the Bhagalpur water-works, which will be completed, it is hoped, early in 1887. The port water-supply works at Chittagong were completed. A new light-house on Shortt's Island, at the mouth of the Damra, was commenced. The net profit on the Sílspur workshops was Rs. 31,437. At the Barákhá Iron-works the outturn of pig-iron was 5,325 tons. This was nearly all either sold or utilised in the factory. The number of miscellaneous castings shows a steady increase. Among other articles may be mentioned ploughs and rice-bowls, for which a steady demand is springing up. The principal manufactures were sleepers and jaws for the North-Western Provinces.

Considerable expenditure was incurred in carrying out *repairs* rendered necessary by earthquakes and floods. At Berhampur an earthquake cost nearly nine thousand rupees. The brick-factory at Akra was flooded in June. In the same month the subdivisional residence at Jahánábád in Bardwán collapsed after excessive rain. The September floods did great damage to the Calcutta and Jessor road and elsewhere, while the Orissa cyclone in the same month severely damaged a portion of the Orissa Trunk Road.

IRRIGATION.

The *total capital outlay* on irrigation works not charged to revenue amounted up to the end of the year to Rs. 5,69,86,969, being more by Rs. 6,38,437 than the corresponding figures of the previous year. These figures include loss by exchange for the first time, this item having been hitherto treated as an indirect instead of as a direct charge.

The *revenue account* of the canals shows Rs. 15,84,935 as gross receipts and Rs. 11,53,416 as working expenses; the net revenue was therefore Rs. 4,31,519, which is more than three times that of the previous year and more than four times that of 1883-84. This is almost entirely due to the great advance made in the Son canals. On the other hand, the Local Government was responsible to the Supreme Government for a sum of Rs. 22,66,610 as interest on direct capital outlay, so that the net loss has been Rs. 18,35,091, as against Rs. 20,84,863 in the preceding year.

In the *Orissa Circle* the expenditure was Rs. 9,92,922, or Rs. 2,85,788 less than in the preceding year. The principal works completed during the year were the Gobri Canal extension, at a total cost up to date of Rs. 4,45,630, and the Patamundi Canal, at a total cost of Rs. 9,32,640. For the latter protective works are still required, and much damage was done in August 1885 by the sudden collapse of an escape. In this circle the cyclone of September 1885 also did considerable damage to an extension of the Kendrapará Canal. The total loss in this circle due to this cause is approximately estimated at Rs. 61,000. The length of canals for irrigation and navigation is the same as

last year, but the distributaries have been increased by $3\frac{3}{4}$ miles. The area irrigated increased from 57,372 to 71,955 acres, and the water-rates show an increase to the extent of Rs. 55,597. The tollage receipts increased to Rs. 64,407, or about Rs. 10,000 more than last year. The total revenue increased from Rs. 1,43,585 to Rs. 2,07,350, and the working expenses from Rs. 3,15,737 to Rs. 3,42,577, leaving a net total deficit of Rs. 1,35,227, as against Rs. 1,72,152 of the previous year.

In the *South-Western Circle* the total expenditure continues to show a steady decrease. In 1883-84 it was Rs. 23,39,352, in 1884-85 Rs. 19,89,002, and in the year under report Rs. 17,84,790. On the Midnapur Canal the capital expenditure has been up to date 82½ lakhs, of which Rs. 10,062 represent this year's expenditure, as against Rs. 24,072 of 1884-85. The net profit of the year under review, Rs. 52,624, was higher than in any year since 1881-82. The collection of water-rates shows only Rs. 69,972 outstanding, as compared with more than a lakh in the preceding year. The navigation returns exhibit a steady development, especially in through traffic. The Hijili Tidal Canal has suffered severely from the deposition of silt, and it requires remodeling, for which a project, costing Rs. 10,39,571, has been submitted to the Government of India. This canal is the connecting link between the river Hugli and the Orissa Coast Canal, and the development of traffic on the latter depends greatly on the efficiency of the Tidal Canal. During the present year it showed a profit of only Rs. 3,846. It was hoped that the Orissa Coast Canal would have been fully opened for traffic in July 1886, but this hope has not been fulfilled. The cause of delay was the cyclone of September, already mentioned, which not only did considerable damage to certain portions of the canal, but, by destroying cattle and vegetation over a large tract, gave rise to epidemic disease and brought the work almost to a standstill. In working the Orissa Canal, so far as it was completed, there was a net loss of about Rs. 16,000. This was the first year in which a revenue account for it was opened. In the Calcutta and Eastern Canals the capital expenditure now stands at Rs. 51,59,067, and the net profits were Rs. 2,92,737. These canals are thoroughly remunerative. Rs. 77,668 were spent in keeping the Nadiyá rivers open for traffic during the dry season, and the profit was Rs. 1,06,113. It is satisfactory to note that the profit on this work is steadily increasing. The Bhágrathi alone was kept open for traffic, whilst on the Mátábhángá and Jalangi arrangements were made to supply the people inhabiting the banks with drinking-water. On the Eden Canal, amongst other works, a new supplementary channel was completed. Rs. 46,938 were spent on this canal, for which no capital or revenue accounts are kept, and which is intended chiefly for the supply of drinking-water. At the same time more than 56,000 acres of land were irrigated from it, and still more would have been so had not irrigation been stopped by order of Government. On agricultural works Rs. 3,63,139 were expended. The Sarpai drainage works are progressing favourably, the excavation of the river having been finished. Last year it was stated that the works for the Balli Bhi had been completed, and it was expected that the whole of the *bhil* would soon be under cultivation. This hope has been realised, for during the year under report it was covered with an unusually rich rice crop. Unfortunately this first crop was destroyed by the unprecedented flood of the Nadiyá rivers. The Howrah drainage works have been completed with the exception of two

embankments. It is satisfactory to know that they have well stood the test of the unusually heavy rainfall of 1885. The floods of August, referred to under the head of Economic Condition of the People, may here be noticed as having breached the Murshidábád embankment and inundated 2,800 square miles of country. The cyclone of September 1885 also did considerable damage; but if the storm-wave had not been partially stopped by the bank of the Orissa Coast Canal, the loss of life and crops would have been much greater.

On the *Son Canal system* the outlay on capital account was Rs. 1,60,701, making up the total direct charges against capital account to Rs. 2,48,61,348. The net revenue was Rs. 5,10,276, or nearly double that of the previous year; and this was so, although there was a slight decrease in the acreage irrigated. The total area irrigated was 333,132 acres, as against 356,577 in the previous year. No addition was made to the number of miles of navigable or branch canals, but 19 miles of distributaries were completed. The collections of water-rates have shown a marked improvement, being about two lákhs more than in the preceding year, and one lakh and three quarters more than the annual demand. The outstanding balance was about four lákhs, as against about seven lákhs at the end of 1884-85. The Sáran Canals are now completed, and the capital account has been closed. It shows a total capital expenditure of Rs. 6,69,230. In the revenue account the receipts were Rs. 41,143, and the expenditure Rs. 22,751, leaving a net revenue of Rs. 18,392. Last year there was a loss of about Rs. 15,000. The Teur Canal has been transferred to Government, and is now known as the Madhubaní Canal, the change of name being one of the conditions of transfer. It has cost the Government Rs. 66,020.

RAILWAYS.

Owing to financial pressure little could be done in the way of opening *new lines* during the year. The policy which was adopted was rather the concentration of expenditure upon nearly completed sections than the extension of work over new projects. The railways of all kinds within these provinces are the (1) East Indian, (2) Patná-Gayá, (3) Tárakeswar, (4) Eastern Bengal, (5) Bengal Central, (6) Dacca, (7) Northern Bengal, (8) Káuniyá-Dharlá, (9) Tírhút, (10) Bengal and North-Western, (11) Dárajíling-Himalayan, (12) Deogarh, (13) Nalháti. The total mileage of these is now 1,948, showing an increase of about 87 miles only.

During the past five years the *provincial railway accounts* have shown a steady increase in the receipts, which in the year under review amounted to 45 lákhs. Working expenses, however, increased at a still more rapid rate and amounted to 31 lákhs, so that the net receipts have only maintained a steady average position. The increase in working cost is due to heavy renewals of sleepers on the Northern Bengal and Tírhút State Railways. This renewal will be completed in the former railway in 1887-88, and in the latter a year earlier. In addition to this, it has been found necessary to relay the Northern Bengal State Railway with steel rails.

During the year an important change in the *police arrangements* of the various State railways has been carried out. For the future the ordinary police will be relieved of the watch and ward of goods in transit and in charge of the railway. The railways now appoint their own men for this purpose, while the Police Department are responsible for maintenance of the law and order.

Regarding *provincial railways*, the Patná-Gayá has been one of the most successful. It is worked by the East Indian Railway Company, and its net receipts were Rs. 2,45,710, giving a profit of Rs. 99,041 to this Government. The Dacca State Railway made good progress during the year, some 75 miles having been added to the 10 open last year. Not being completed, however, the line was worked at a loss of Rs. 57,347. The gross receipts of the Northern Bengal State Railway were larger than they have ever been before. The net receipts were about 8½ lakhs, which left a profit of Rs. 17,293 to Bengal. The Káuniyá-Dhárla line, which, as explained in last year's report, has no interest to pay on its capital, showed a decrease in its gross receipts, which is attributed to reductions made both in passenger and on goods rates. The net receipts were Rs. 19,617, against Rs. 34,217 last year, the whole of which is profit to Government. The Assam-Bihar State Railway, which is intended, when completed, to connect the North-Western Provinces, Bihar, and Bengal with Dhubrí, the nearest station of Assam on the Brahmaputra, made good progress during the year. At present it is in disconnected sections. At the end of the year on the Assam-Bihar section the line was in running order from Manihári to Kasba, a distance of 37½ miles, while on the Tírhút section 14 miles were ready for general traffic and a further distance of 6 miles completed sufficiently for goods traffic at slow speed. The Gandak bridge approaches completion, and it is hoped that it will be finished before the end of 1886-87. On the Tírhút State Railway the gross receipts were Rs. 12,80,258, and the net receipts Rs. 3,64,674, or about Rs. 80,000 more than last year. This left a reduced loss to the Bengal Government of Rs. 2,27,267, as against 3 lakhs of last year. The improvement in the receipts is attributed to a large reduction in the 3rd class passenger fares. The Nalháti State Railway, which is on a four-foot gauge, was worked at a reduced rate of speed during the year. The gross receipts were Rs. 78,803, and net receipts Rs. 7,703. The net loss to the Provincial Government was Rs. 6,124.

The *Imperial Railways* in this province are the East Indian and Eastern Bengal. The former is the property of the Imperial Government, but is worked by a Company, and the Provincial Government has no direct connection with it. The only extension on this line was the Dígha Ghát branch, 5½ miles in length, connecting the main line with the river Ganges, and thence by ferry with the Bengal and North-Western Railway. The most important new work in progress was the new Húglí bridge, intended to connect this line with the Eastern Bengal Railway. It is hoped that this important work will be very shortly finished. The number of passengers carried shows a steady increase, being 11,246,583 during the calendar year 1885. There was, however, a slight decrease in passenger receipts. The gross earnings were Rs. 4,63,86,914, and the net profit Rs. 3,00,35,676. Out of this the Government share of surplus profits was Rs. 65,18,010, and the Company's share Rs. 16,29,503. More than one-third of the earnings was in goods traffic, which shows a substantial increase both in amount carried and in receipts. The Eastern Bengal Railway, which includes the old Calcutta and South-Eastern Railway, is under the Director-General of Railways, and the Bengal Government is only interested in it financially to the extent of above Rs. 1,30,000. This Railway will probably soon become a provincial one. Many important improvements are being carried out upon it. The net revenue during the year was Rs. 12,06,429.

The Tárakeswar, Bengal Central, Bengal and North-Western, Dárjling-Himalayan, and Deogarh Railways, are *assisted* lines. The Tárakeswar line was worked by the East Indian Railway, and gave a 7 per cent. dividend for the year 1885. It is hence a financial success. The Bengal Central is worked by the Eastern Bengal Railway. The gross earnings for 1885 were Rs. 5,35,353, and the working expenses Rs. 5,27,119. The earnings show a slight increase. The smallness of the profits are explained by competition with boat traffic and by the severe floods of 1885, which caused the line to be broken between the 13th September and the 25th October. The Bengal and North-Western Railway has only 92½ miles within the boundaries of this province. The total net earnings of this line during 1885 were Rs. 5,89,206. On the Dárjling-Himalayan line the total outlay of the Company up to the end of 1885 was Rs. 26,77,718, and the percentage of earnings to capital was 5·98. The small Deogarh Railway gave a dividend of 5 per cent. during 1885. The Alípur Coal Company's siding on the East Indian Railway, hitherto called the Khairabad-Rupnarainpur Railway, was completed during the year. Several surveys, which last year were in a more or less advanced stage, remained this year in abeyance. The Benares-Cuttack-Purí Imperial Railway survey was continued through the year, and was expected to be closed by the end of the rains of 1886.

TELEGRAPH AND POST OFFICES.

There has been during the year a considerable extension of *telegraphic* facilities in these provinces. Three hundred and thirty-nine new miles of telegraph lines were erected, making a total of 5,109 miles open at the end of 1885-86. Sixty-seven offices were opened and 5 closed, so that there were 530 open at the end of the year. The number of messages despatched from Government offices was 395,312, showing an increase of 50,203 over that of the previous year. The Indian share of the collections on account of these messages was Rs. 6,07,223.

During the year 41 post-offices were converted into *combined post and telegraph offices*, and one was closed, leaving a net total of 100 of these offices open at the end of the year. Sixty-four thousand three hundred and seventy-two messages, of a value of Rs. 68,724, were despatched from them. The expenses were Rs. 22,568, and the net balance of income over expenditure Rs. 45,856.

The *postal system* was also considerably developed. The post-offices increased from 2,021 to 2,104, the letter-boxes from 4,369 to 4,582, the postmen from 1,507 to 1,544, and the village postmen from 1,836 to 1,932. An addition of 410½ miles was made to the length of postal lines, zamíndári and imperial, raising the total length to 24,196½ miles.

The increase in *postal business* was very large. The total number of letters, post-cards, newspapers, packets, parcels, money-orders, and Indian postal notes increased to 55,038,438, or by 5·88 per cent. Value payable articles increased by 26 per cent., and the value of money-orders issued rose from Rs. 2,50,84,124 to Rs. 2,91,56,632. The value of telegraphic money-orders issued increased from Rs. 67,851 to Rs. 1,76,587. The number of Indian postal notes sold, on the other hand, decreased from 47,749 to 39,574. Two thousand one hundred and seventy-three British postal orders were sold. In the Savings

Bank Department the amount of the deposits was Rs. 63,31,040, and of the withdrawals Rs. 40,98,002. The transfer of the District Savings Bank to the post-office, which took place towards the close of the year, has contributed in a large measure to increase the number and value of the transactions. The value of stock notes sold fell from Rs. 9,450 to Rs. 3,825. On the other hand the business of the purchase, sale, and custody of other Government securities rose from Rs. 1,75,600 to Rs. 2,17,900. Policies for life insurance were granted to servants of the Department to the amount of Rs. 53,250.

There were 61 *prosecutions* of postal servants during the year. The most serious offence was one of forgery of money-orders to the aggregate value of Rs. 5,750. The offenders were arrested and convicted.

At the close of the year there were 284 post-offices supported from funds raised under the *Zamindari Dak* Act. The total mileage of lines paid from the cess was above twelve thousand, and the number of articles which travelled through the district post was 3,552,154, showing an increase of 15·30 per cent.

IMPERIAL REVENUE AND FINANCE.

The actual Imperial *receipts* increased from Rs. 12,31,59,008. to Rs. 12,54,44,784. The major heads were land revenue, opium, salt, stamps, excise, customs, assessed taxes, forest, registration, and interest. There were considerable fluctuations under all heads during the year. Of those above mentioned, all show an increase except salt and excise, which show a loss. Altogether nine heads show an increase of Rs. 38,77,267. Receipts from land revenue increased by Rs. 10,36,052 owing to realisation of arrears of revenue in the Bardwán Rāj estate; from opium by Rs. 21,66,903 owing to an increased quantity (principally of Behar opium) being sold; from stamps by Rs. 1,33,420, due to the introduction of the Bengal Tenancy Act, to the extension of the system of levying copying-fees, and to a single item of receipt on account of probate of a will; and from customs of Rs. 2,58,006, due to a partial revival of trade. The other items of increase call for no remark. Four heads show a total decrease of Rs. 15,91,491. Of these the principal were salt, in which the decrease was Rs. 12,04,251, due to a considerable falling off in the import trade; and excise, in which the decrease was Rs. 2,33,763, due partly to failure of crops and partly to the reintroduction of the *sadr* distillery system in urban tracts. The actual Imperial *expenditure* increased from Rs. 3,38,61,440 in 1884-85 to Rs. 3,43,96,855 in 1885-86. Altogether there was an increase of Rs. 10,10,132 and a decrease of Rs. 4,74,717. The chief item of increase was opium, in which it amounted to Rs. 8,66,272, due to larger payments in consequence of the exceptionally large outturn of the crops. Under the head of Police there was an increase of Rs. 44,367, due to larger payments on account of State Railway Police; and under Stationery and Printing of Rs. 60,647, due to the purchase of a large quantity of country paper. About half the decrease is only nominal, due to adjustments in accounts. The other items of decrease are not of great importance.

There were during the year, including provident institutions, but exclusive of those under the post-office, 53 *savings banks*. Including post-office savings banks the number of depositors was 63,803, as against 58,125 in the previous year. The increase was almost entirely in the case of post-office savings

banks, the number of depositors in district savings banks having diminished more than half owing to the transfer of the balance of their accounts to the former. The balance at credit of depositors at the end of the year increased from Rs. 96,19,376 to Rs. 1,03,89,280. The system is steadily increasing in popularity.

At all Bengal treasuries the receipts of *currency notes* during the year amounted to Rs. 3,92,03,350, and the issues to Rs. 3,94,27,270, against Rs. 3,68,87,040 receipts and Rs. 3,67,26,935 issues of the previous year. There has been a steady increase in receipts of currency notes in payment of Government dues. There has also been an increase in the amount of notes received from the public and issued to the public as exchange for silver. The receipts and issues, however, under this head fluctuate, and are regulated by the effect of trade on country produce.

The sale of *stock notes* has diminished to Rs. 4,937 from Rs. 21,475, and the scheme must be said to have proved a total failure in Bengal.

PROVINCIAL AND LOCAL FINANCE.

Including an opening balance of Rs. 12,02,040, the *provincial receipts* from all heads aggregated Rs. 4,39,10,475, against (revised figures) Rs. 4,30,79,090 for 1884-85. The total *disbursements* increased from Rs. 4,18,77,050 to Rs. 4,24,47,781. The *balance* at the end of the year was Rs. 14,62,694.

The provincial share of *land revenue* aggregated Rs. 1,29,43,650, as against Rs. 1,28,31,920; the increase under this head, and under the head of Provincial Rates, being due to the recovery of arrears of revenue and cess in the Bardwán and Tikári estates. *Receipts* under the heads of Stamps, Provincial Rates, Assessed Taxes, Forests, Registration, Jails, Marine, Education, Stationery and Printing, State Railways, and Irrigation Works, showed an increment; those under other heads a decline. The receipts from stamps rose from Rs. 61,95,610 to Rs. 66,29,027, due to the introduction of the Bengal Tenancy Act, the extension of the system of levying copying-fees by means of stamps in lieu of cash, and to a large item of receipt on account of probate of a will. There was a falling off by about 2½ lakhs under Excise, owing partly to the reintroduction of the sadr distillery system and partly to the high prices of food-grain which prevailed throughout the year. There was an increase of about Rs. 84,000 under the head of Stationery and Printing, which was due to a large amount of printing work done for Local Funds and Municipalities, to receipts for rent forms under the Bengal Tenancy Act, and to one special item of receipt. The above and other items of increase and decrease are dealt with more at length under the various chapters of this summary to which they refer. Under the various heads of *expenditure*, it may be noted that the decrease under those of Refunds and Drawbacks, Customs, and Administration, was due to special instances of excess expenditure in the year 1884-85. There was an apparent increase under the head of Stationery and Printing, due to adjustment for the first time of the profits of the printing work done in the Presidency Jail Press to this head by credit to Jail receipts. Under the head of Judicial Courts there was an increase of about Rs. 2,72,000, due principally to the appointment of additional Judges of the High Court, the

formation of additional Appellate Benches, and to the appointment of thirteen additional Munsiffs through the province. The other items of expenditure do not call for special remark.

From *incorporated local funds*, including an opening balance of Rs. 16,01,469, the total receipts were Rs. 63,72,655, and the charges Rs. 44,32,361. In these are comprised the District Road Funds and Accounts, the District Post Fund, and the Inland Labour Transport Fund. The *excluded local funds* include twenty-nine funds for Cantonment, Police, Port and Marine, Education, Medical and Charitable, Public Works and other miscellaneous special purposes. The total receipts of these funds, including an opening balance of Rs. 2,03,794, were Rs. 8,08,622. The total expenditure was Rs. 5,36,531. The most important was the Bruce legacy mentioned in the report for 1884-85. A scheme has been prepared by the High Court for the establishment and maintenance of the Bruce Institution, and arrangements are being made to give effect to the scheme.

ROAD AND PUBLIC WORKS CESS.

During the cess year 1884-85 no change was made in the *rates* of either the road or public works cess, the maximum rates having been levied in all the districts in which the Act is in force except in Bakarganj, where, as hitherto, the road cess was levied at half-rate. The current demand rose to Rs. 74,36,830 from Rs. 73,75,697. The increase is said to be due to revaluations and to the valuation for the first time of rent-free holdings. The arrear demand increased from Rs. 12,60,272 to Rs. 15,63,317. In spite of this increased gross demand there was an improvement in the net outstanding balance at the end of the year, which fell from Rs. 15,93,981 to Rs. 14,28,631.

There was a slight increase in the number of *certificates* under the Public Demands Recovery Act filed during the year. From 74,674 the number rose to 77,631. In only 426 cases was it found necessary actually to sell the attached property.

Complete *revaluations* are in progress in the districts of Cuttack, Purí, and Balasor. The revision of the revaluations of Mámbhúm has been completed, resulting in an increase of more than 3½ lákhs over the original valuation. In four other districts partial valuations were in progress.

LAND REVENUE.

On the *revenue roll* there were 147,008 permanently-settled, 7,764 temporarily-settled, and 2,950 Government estates, and 24 raiyatwári tracts. The increase in the number of permanently-settled estates was 1,551, which was due, as in former years, to partitions. Including an arrear demand of Rs. 30,13,936, the total demand for realisation was Rs. 4,10,47,315. There was a small increase in the current demand of Rs. 45,693. In former years the annual increase amounted to about a lákhs and a half of rupees, and the diminution in the rate of development is attributed to the greater moderation shown at present in enhancing rents and the greater readiness to reduce them where found excessive. The collections aggregated Rs. 3,83,91,424. The balance, after deducting remissions, was Rs. 24,55,886. The percentage of collections to the current demand was 100·94, and to the total demand 93·53. The remissions amounted to the large sum of Rs. 2,00,005. The heaviest remissions of grace occurred in

Gayá, Jalpaiguri, Hugli, Midnapur, Cuttack, and Bákarganj. The principal reasons for granting them were failure of crops, floods, and the Orissa cyclone. The balance was Rs. 5,58,050 less than at the close of the previous year, which is due to an accidental arrear in the Bardwán estate in 1884-85. After allowing for this, the collections for the year under report compare unfavourably with those of previous years. The collections from wards', temporarily-settled, and Government estates were unsatisfactory; on the other hand, there was a considerable improvement in raiyatwári tracts.

The initial *registration* of proprietary interests in estates and revenue-free properties was completed in 36 districts, leaving seven districts in which the operations are still pending, in only one of which is the work remaining to be done considerable. The mutations registered were not considered to fairly represent the number of changes in title which occur; and the question whether judicial or executive action should be taken to ensure a more complete record of such transactions is at present under consideration.

The *sale laws* were worked generally with moderation and leniency. Only 1,770 estates were actually sold out of 12,445 which became liable to sale for default in paying revenue. The number of estates bought in by Government at nominal prices was 143, and these were presumably let go for sale because, owing to diluvion and other causes, they could no longer bear the revenue assessed.

The number of *certificates* pending was 119,566, against 115,379 in 1884-85. There was a considerable increase in the issue of certificates for the realisation of water-rates. The number of cases in which it was necessary actually to sell property diminished from 8,599 in 1884-85 to 6,284 in 1885-86.

The collections of *miscellaneous revenue* decreased from Rs. 2,51,827 to Rs. 1,91,451, which was due to the introduction of a new rule under which searching and copying fees are realised in stamps instead of in cash. During the year 526 *partitions* were effected, against 502 in the preceding year, and it is stated that work of this class is increasing. The area of *land acquired for public purposes* was 3,262 acres, for which Rs. 11,42,697 were paid as compensation.

The *Bengal Tenancy Act* came into operation on the 1st November 1885, and was therefore in force during five months of the official year. The principal work done in revenue offices in connection with the Act has related to the issue of notices and payment of landlords' fees on transfers of tenures. A petition was addressed to Government on the subject of the working of the provision that tenants holding at a rent fixed in perpetuity must give notice and pay a fee to the landlords through the Collector on transferring their holdings. It is alleged that raiyats not holding at fixed rates adopt this procedure, thereby creating evidence which in future may be accepted as proof that they really occupy the privileged position which they claim. It has been pointed out, however, that this fear does not rest on any solid foundation. There were 223 cases of appraisement of produce, which occurred principally in the Patná Division. The result has been reported to have been so far satisfactory. There were four applications for survey and record of rights, two of which were pending at the close of the year. The subject of the survey and record of rights in the Muzaffarpur district will be found noticed under the head of Survey.

The provisions of the Act on the subject of *receipts for rent* have produced a very immediate and striking effect, and give matter for comment in every part of the province. It was part of the enactment on this subject that rent receipts shall contain certain stated particulars; and further, that if a receipt did not contain substantially the particulars required, it shall be presumed, until the contrary is proved, to be an acquittance in full of all demands up to date. Such a change affecting every payment of rent throughout the province, and tending to bring old disputes to a head, naturally gave rise to much trouble and misunderstandings at first. The misunderstandings have been already in many cases cleared away, and by degrees only those cases will remain which the law was intended to meet, viz. those in which the landlord has been keeping his accounts so as to show a higher rent than that which is authorised by law, those in which illegal cesses have been collected, and those in which through former neglect the real rent has never been ascertained. On such estates the first effect of the new law may be to increase contention with the ultimate effect of producing a satisfactory settlement. Even in these cases, what brings matters to an issue is merely the insisting on the discharge of an obligation which existed under the old law and has always been considered necessary in Bengal—the entry in the receipts of the period in respect of which rent is paid. This is a necessary form of honesty and fair dealing insisted on in business of every kind; and if its observance in transactions between Bengal zamíndárs and their raiyats causes friction, that is the best proof that the precaution is necessary either to clear up uncertainty or to prevent fraud. With the exception of these difficulties in regard to notices of transfer and to receipts, the working of the new law has not appeared as yet to be likely to be attended by any such disturbance of the relations between landlords and tenants as was apprehended by some of those who were opposed to the introduction of the measure. The other provisions of the Act appear to be working smoothly: recourse is being had to the sections relating to the appraisement of produce rents and to the registration of improvements, and some applications have been received for the settlement of rents. At present, however, there are no materials for forming an opinion on the operation of the more important sections of the law, such as the publication of price lists, the sale of tenures subject to encumbrances, and the modified procedure for distraint. The real benefits of such a measure as the Tenancy Act are to be looked for, not in the number of cases in which application may be made to the courts to enforce its provisions, but in the peaceful acceptance by all classes of the principles which underlie it, that the landlord is to be secured in the enjoyment of his fair rent, and that the tenant is to be maintained in the possession of his rightful holding.

CUSTOMS.

In the year 1884-85 there was an increase of 6·4 per cent on the net customs receipts owing to larger clearances of salt. During the year under report the receipts amounted to Rs. 2,09,53,901, showing a decrease of 3·9 per cent., due to a decline of 11½ lakhs of rupees in the duty from the same article. Excluding the salt duty, there was an improvement in import customs duties of Rs. 62,316, or 4·8 per cent., owing to larger collections on imported spirits and malt liquors. Export duties rose by Rs. 2,08,670, or 13·5 per cent., owing to the recovery of the rice trade from previous depression.

OPIUM.

The report on the *administration* of the Opium Department refers to the year 1884-85. This year in most districts of the Behar Agency the rainfall was deficient. In the Benares Agency the season was favourable. In Behar there was an increase of net cultivation of 33,683 bighás, but a decrease in produce of 3,758 maunds. In the Benares Agency the net cultivation increased by 61,401 bighás, and the produce by 10,964 maunds. Taking, therefore, the two Agencies together, there was a net increase of net cultivation by 95,084 bighás and of produce by 7,206 maunds. Both net cultivation and net produce were larger than in any previous year. The total produce of the two Agencies amounted to 1,33,803 maunds at 70° consistency. Complaints have been made by the Behar Agent that the prospects of the Opium Department were being injuriously affected by the competition of other agricultural industries. The matter was investigated by the Opium Commission, who arrived at the conclusion that the only crops which seriously competed with poppy were potatoes, sugarcane, and tobacco, of which the two latter were less profitable than opium, while potatoes commanded only a small market. There was, therefore, no cause for alarm. In the Behar Agency the opium as delivered by the cultivators was of remarkably high consistency, while the reverse was the case in the Benares Agency. The balance of *advances* made for cultivation outstanding was at the end of the year 1884-85 Rs. 26,753. Compared with the 267 lakhs of rupees advanced, this sum is relatively small. The policy of recovering the old balances has been successful, and the raiyats enter on the new year unembarrassed by outstanding accounts. In Behar Rs. 1,11,100 and in the Benares Agency Rs. 26,961 were lent for the *construction and repairs of wells*. In some districts of Behar wooden aqueducts or shoots have been constructed, which convey water from the raiyats' wells across the canal distributary to the poppy-field. The proposed scheme of damming up hill streams in certain districts with a view to distributing their water by means of small channels, and the effect of growing indigo and poppy on the same land, have been referred to the Director of the Agricultural Department for consideration. During 1884-85, 1,284 cases were instituted in the Lower Provinces and 614 in the North-Western Provinces and Oudh for *offences against the opium law*, and in the former 1,048 persons and in the latter 584 persons were convicted. No great success was obtained against the chief culprits—the dealers in illicit opium.

With regard to the period from 1st April to 31st October 1885, the opium *manufactured* at the Behar Agency amounted to 47,876 maunds at 75° consistency and 2,122 maunds of excise opium. At the Benares Agency the corresponding figures were 47,740 maunds at 70° consistency and 1,609 maunds of excise opium. The experimental *purchases of Malwa opium* for excise purposes have been continued. Three thousand two hundred and three maunds of this opium were in store during the year, of which 706 maunds were issued as excise opium. This opium is said to be generally appreciated in the Central Provinces, but is not popular in the North-Western Provinces.

The total number of chests of provision *opium sold* during the official year 1885-86 increased from 46,698 to 50,994. The total receipts of all kinds from opium amounted to Rs. 6,35,76,739, and the charges to Rs. 3,05,08,885. The net revenue increased from Rs. 3,18,00,678 to Rs. 3,30,67,854. The average

price realised per chest decreased from Rs. 1,295 to Rs. 1,234. The accounts for 1885-86 have not yet been finally closed, and hence these figures for the year under review are open to correction.

SALT.

The *results* of the year 1885-86 as compared with the previous year show a decrease of Rs. 12,29,533, or 6 per cent., in the receipts and of Rs. 29,737 in the charges. The total receipts were Rs. 1,90,97,482, and the total charges Rs. 2,41,714. The decrease in the receipts was general. Under the head of Duty it was due to smaller clearances, and under the head of Rent of Warehouses to a reduction in bonding transactions. The decrease in the charges was chiefly due to smaller refunds of customs duty.

The *quantity* of salt in stock at the commencement of the year was 15,41,259 maunds. During the year 94,01,468 maunds were imported or manufactured, and 9,82,909 maunds remained in stock at the close of the year.

The *importation* of salt was confined during the year to the ports of Calcutta and Chittagong, and there was a decrease of 6,69,495 maunds. There was no importation at Cuttack. Salt importations were made from the United Kingdom, Hamburg, Bombay, the Arabian and Persian Gulfs, Italy, Port Augustus, the United States, Madras, and Akyab. The clearances of salt from shipboard in Calcutta decreased by 1·7 per cent., and in Chittagong by 68·9 per cent. The total quantity cleared from bond amounted to 19,06,624 maunds, against 21,19,010 maunds in 1884-85. The total import duty on salt amounted to Rs. 1,80,30,320, as compared with Rs. 1,91,90,460 in 1884-85.

The total receipts from *excise duty on salt* were Rs. 9,65,687, against Rs. 10,11,999 in 1884-85. Salt was manufactured under the excise rules in Orissa only. There was an increase of 20,832 maunds in the total quantity manufactured. The quantity of this salt sold diminished from 5,01,255 maunds to 4,78,749 maunds. Sales decreased in the 24-Parganas and at Balasor, but the largest fall was in Cuttack, which was very probably caused by an illicit trade carried on in the district. The Salt Department in Orissa has now been transferred to the control of the Commissioner of Salt Revenue, Madras, and it is hoped that the trained supervision to which operations are now subjected will stamp out illicit dealings.

EXCISE.

The *financial results* of the year were a decrease of Rs. 4,67,386 in the revenue and an increase of Rs. 15,908 in the charges. The total revenue was Rs. 95,81,583, as against Rs. 1,00,48,969 in 1884-85, and against Rs. 95,96,420 which was the annual average between 1880-81 and 1884-85. The revenue decreased under every head except charas, sidhi, májum, chandu, and miscellaneous; but the great reduction was in the item of *country spirits*, which alone accounted for Rs. 3,44,994 of the decrease. This decline in the revenue derived from country spirits was universal throughout the province, the largest falling off occurring in Calcutta (Rs. 1,23,285), Gayá (Rs. 79,987), Patná (Rs. 72,860), and Bhagalpur (Rs. 59,994). The decrease in Calcutta was due to local causes, elsewhere it is attributed to bad harvests and the substitution

of central distilleries for outstills. The changes carried out last year, on the recommendations of the Excise Commission, would naturally at the outset have an unfavourable effect on the revenue from outstills in some places; but there can be no doubt as to the wisdom of maintaining the outstill system in rural tracts, though the extension of this system to some urban areas resulted in an artificial increase in the revenue, accompanied by serious defects in administration. A return to the method of direct control in large towns is advisable in the interests of good government. The revenue from the sale of *rum* fell from Rs. 98,707 to Rs. 77,091. Rum of local manufacture is being superseded by foreign rums and cheap brandies; nevertheless the revenue from licenses for the sale of *imported spirits* and *wines* fell by about Rs. 10,000. There was a decrease of Rs. 15,816 in the revenue from *tari*, and of Rs. 8,276 in that from *pachwai*,—the high price of rice, the raw material from which it is made, being attributed as the chief cause of the decline of revenue derived from the latter. Owing to a rather short crop of *ganja* the prices of the drug were considerably enhanced, which resulted in a decrease of Rs. 40,973 in the total revenue derived from it. There was a decrease in consumption, and consequent decrease in revenue by Rs. 25,954 in the case of *opium*. By far the largest decrease occurred in the Chittagong district, where consumption had for years shown an increase without any proportional increase in the amount levied from license-fees—a fact which pointed to extensive smuggling into Burmah. During the year, however, more active measures were adopted to prevent illicit dealings, with the result that while the quantity passed for consumption was reduced by 33 maunds, the reduction in license-fees was only Rs. 110.

The number of *arrests for offences* against the excise laws was 4,122, or about a hundred less than in the preceding year. The number of convictions was 3,583, against 3,576.

STAMPS.

No *change* was made during the year in the stamp law, in the descriptions of stamps used, or in the system under which they were supplied to the public. Non-judicial impressed sheets of the value of four annas, for use in realising *copying-fees*, were first issued in November 1885. The introduction of these stamps has reduced the manufacturing cost by one-half. Having regard to the economy thus effected, the question has been raised whether a similar description of paper should not be used for other non-judicial stamps of small value, from which a saving of Rs. 50,000 a year would result. The question is now under the consideration of the Government of India. The question of the reduction of the stamp duty on *policies of insurance* other than life and marine, and on re-insurances, was considered during the year. The duty on policies of re-insurance has been fixed at one rupee, irrespective of the amount of the policy; but the proposal to reduce the rates on short-term policies is still under consideration. Three *rulings of importance* in regard to stamp law were laid down. It was held by the High Court that deeds of dower, or *kábinnámahs* executed on the occasion of marriages between Musalmáns, were subject to stamp duty as a bond. The Government of India has, however, exempted this class of instruments from the payment of stamp duty. The Board held that each of a number of persons executing a power-of-attorney authorising one or more agents to act on behalf of them in their joint and several interests

should pay a separate stamp duty, to be calculated according to the number of persons authorised to act. With this ruling the High Court agreed. In another case the High Court decided that a deed conveying a ten estate from certain persons as private individuals to themselves as a limited company should be stamped as a conveyance chargeable with *ad valorem* duty on the par value of the shares and debentures.

The gross *revenue collected* under the Stamp Act and Court-fees Act amounted to Rs. 1,32,58,046, showing an increase of Rs. 2,66,832 compared with the realisations of the previous year. The increase under the Stamp Act alone amounted to Rs. 1,17,319, and the revenue under this head is the largest that has been obtained since the introduction of the Act. There was a comparative decrease in the charges under the Stamp Act, so that the net revenue increased by Rs. 1,21,988. The total charges aggregated Rs. 6,25,992, and the total *net revenue* was Rs. 1,26,32,054. The increase in the *sale of stamps* amounted to Rs. 1,46,775; but of this amount only Rs. 2,432 represented the increase in sales of non-judicial stamps, the balance being due to sales of judicial stamps. With regard to *non-judicial* stamps, in impressed sheets the collections showed an increase of Rs. 2,061. The sale of impressed labels, which is limited to Calcutta, amounted to Rs. 5,67,237, showing a decrease of Rs. 22,680. The decrease under this head would, it is said, have been much greater but for the stamping of the conveyances of certain tea estates under the ruling of the High Court already referred to. The sale of receipt stamps increased from Rs. 1,86,046 to Rs. 2,08,125. There is still, however, room for improvement in this branch of the revenue, and it is hoped that the extended use of the post-office for the sale of these stamps will tend to diminish the evasion of the law, which is now common. There was a considerable decline under the head of foreign bill stamps, owing to the fact that remittances are now more frequently made by telegraphic transfer. The receipts from the sale of hundi stamps amounted to Rs. 86,862, against Rs. 79,569 in the previous year. There were no other variations of importance. The revenue from *judicial stamps*, exclusive of stamps for copies, increased from Rs. 89,53,519 to Rs. 90,44,963. The proceeds of the sale of stamps for copies amounted to Rs. 4,64,326, being 12·8 per cent. in excess of the receipts during the previous year.

There was a slight increase in the number of cases in which *penalties* were levied, but the amount of duty and penalty realised decreased. There was some increase in the number of *prosecutions* under the Act, and their result was satisfactory.

LICENSE-TAX.

No change was made in the law under which the license-tax is collected. The *assessing officers* visited 26,232 villages, including 580 streets, in Calcutta. Officers other than assessors also visited a considerable number of villages. There was an increase of 352 in the number of *assesseees*, and the total number assessed was 69,882. One person in every 951 of the population paid the tax, and the average incidence was Re. 1 to every 46 persons. The incidence was highest in Calcutta and lowest in Singbhúm. The *gross demand* was Rs. 17,73,430, the net *collections* Rs. 14,29,120, and the balances, allowing for remissions and refunds, amounted to Rs. 7,005. The bulk of the balances was, as usual, irrecoverable. The number of *objections* lodged was 18,678. In 11,258 cases the original assessments were upheld, in 2,204 they were modified

by the transfer of the objector to a lower class, and in 5,215 cases the assessments were cancelled. Of persons originally assessed, 24·7 per cent. objected, against 25·4 in 1884-85. The *net receipts* from the tax fell off in 22 districts and increased in the remainder. Floods, bad harvests, and general depression of trade, are the principal causes assigned for the decrease.

The license-tax has from the beginning of the current year been replaced by the *income-tax*, and the year whose transactions are now recorded is the last of the operation of the former impost. A *brief history* of the phases through which the license-tax has passed since the year 1878-79 will be found in the body of this report. The annexed *map* shows the incidence of the tax per head of population in each district of these provinces during the year 1885-86.

VITAL STATISTICS.

A slight improvement was made in the *registration* of vital statistics during the year 1885. The recorded birth-rate rose from 23·51 to 24·71, and the death-rate from 20·83 to 22·74. Many casualties caused by the cyclone and storm-wave in Orissa have, it is said, found no place in the year's statistics owing to there being no persons to record them; the *chaukidárs* having perished with the inhabitants. It is estimated that in Orissa alone about 5,000 persons must have perished, and no record of their death has been kept.

Births were registered in 46 towns with a total population of 1,661,577, and in these 41,133 children were recorded as born. Within the area in which registration of *deaths* is carried on the population is estimated at 66,163,884 persons. Among these the deaths reported amounted to 1,504,745. Several municipalities have already taken over the work of registration from the hands of the police, and much of the improvement in the returns of the year is attributed to this cause. Cholera prevailed with greater severity during the year under report. The recorded deaths numbered 2·62 per mille, against 2·03 in 1884. Deaths from small-pox fell by one-half, but fever proved more fatal than in any year within the past decade. Further particulars will be found under the head of Sanitation.

In *Calcutta* the *birth-rate* during 1885 was 29·3, and the *death-rate* was exactly the same. The number of births registered was 8,358, as compared with 8,290 in 1884. The highest rate of births was 49·5 amongst the mixed races, while Hindus show a rate of 20·3, non-Asiatics of 16·4, and Musalmáns of 16·0. The *death-rate* of the European population of the port was 23·6, or nearly one-half of what it was in 1884; that of the native floating population was 4 per mille. There was a great decrease in the mortality from cholera in the port during the year.

In a total non-military population of 33,829 in Bengal *cantonments* the recorded death-rate was 21·49 per mille.

EMIGRATION.

The review of emigration to the colonies has hitherto been made for the financial year; for the future it will be made for the calendar year. The present review deals only with the operations of the last nine months of 1885. The review of inland emigration will deal with the whole of the same calendar year.

With regard to *colonial emigration*, the new Act XXI of 1883 did not come into force pending the final approval of the draft rules. These were under consideration during the year, and, after consultation with the Agents of the various Colonial Governments, finally came (with the new Act) into force on the 1st April 1886.

The year was marked by a striking falling off in the demand for Indian labourers. Instead of ten colonies, as last year, only three—British Guiana, Trinidad, and Fiji—sent requisitions for coolies, and the two first for a smaller number. Altogether, requisitions were made for only 6,430 coolies, against an average of 14,734 in the four preceding years. The falling off is attributed to the declining state of the sugar industry, and, in Jamaica, to the introduction of representative legislation. Fiji is the only colony in which the demand for immigrants has increased. The Lower Provinces of Bengal now head the list as supplying the largest number of emigrants, instead of the North-Western Provinces, as formerly. This is the case whether we count the numbers by the place of recruitment or by the native district of the recruits. The change is attributed principally to dearness of food in Bengal and Behar. The districts from which natives emigrated in the greatest numbers were those of South Behar and Gházipur. Gayá, Sháhábád, and Patná head the list. Of the 5,884 emigrants who actually embarked, the men numbered 3,502, the women 1,560, and the children 822. Four hundred and eighteen of all these were emigrants who had previously returned to India from the colonies. In the great majority of voyages the health of the emigrants was fair. Returned emigrants numbered 4,077, who brought back with them savings amounting to more than $4\frac{1}{2}$ lakhs of rupees. Those returning from British Guiana brought home most, their savings averaging something over Rs. 250 each. The death-rate on one return voyage from Guadeloupe reached so high a figure as 9·87 per cent. of the whole number on board. The explanation given for this and for similar previous voyages from the same colony—the feeble health of many of the passengers—seems to indicate that the country is not one in which Indian coolies thrive.

With regard to *inland emigration* during 1885 five contractors, employing 147 recruiters, registered 4,398 emigrants and dependants; while 1,743 garden-sardárs certificated under the Act registered 12,006—6,297 *viâ* Dhubrí and 5,709 *viâ* Goálánda. There were, therefore, 16,404 emigrants thus recruited—a large diminution from the 31,286 of the previous year. The reason for this is no doubt the great development of the system of “free” or assisted emigration, under which the emigrants are not registered, and of which the statistics are imperfect. Six recruiters’ licenses were cancelled during the year. No cases of misconduct were reported among garden-sardárs. At the Calcutta depôts there arrived 4,249 contractors’ emigrants. The year was a fairly healthy one in the depôts, the mortality having decreased from 0·60 per cent. to 0·31. Five deaths from cholera occurred; and two from diarrhoea and dysentery. At the Goálánda depôts 3,501 coolies were received. Of the 2,543 coolies who embarked for Assam, only 0·27 per cent. died on the journey—a considerable diminution from the returns of former years. This decrease of casualties is attributed to less overcrowding among the smaller number of passengers. Amongst coolies conveyed to Cachar and Sylhet by country boats, the average mortality has been 5·10 per cent. It is hoped that this high rate will be diminished by the new subsidised steamer service opened since the close of the year under report.

The annexed *maps* show the various districts whose inhabitants show the greatest willingness to emigrate. It will be observed that South Behar and the districts of Hazáribágh, Bírghúm, Bánkurá, and the Santál Parganas furnish by far the greatest number of emigrants in proportion to their respective populations. The inhabitants of South Behar, however, emigrate in the greatest numbers to the colonies, while those of the other localities mentioned confine themselves almost entirely to inland emigration.

MEDICAL RELIEF.

The *health of the town of Calcutta* during 1885 shows a slight improvement on that of the previous year, the general death-rate falling from 30·5 to 29·3. The mortality from cholera was 1,603 against 2,272 in 1884, and was considerably less than the numbers registered in the past four years. On the other hand there was a large increase of from 1,209 to 1,655 in the number of deaths from diarrhoea and dysentery. The mortality from fevers slightly increased, while there was a large falling off in the number of deaths from small-pox.

The in-door patients at the *Calcutta Hospitals* numbered 23,863, being an increase of 2,170 on the figures for the previous year. Cholera and small-pox cases showed a marked decrease, the increase being chiefly confined to fevers, bowel-complaints, and venereal disease. Diseases of an asthenic type also prevailed largely during the year; in the Campbell Hospital especially there was an accession of 1,086 patients, who suffered from disorders generally associated with failure of vital power. Towards the end of the year there was a large increase of patients at this hospital, principally due to distress in the flooded districts and its consequences. Although the cases of cholera and diarrhoea diminished in number, the hospital death-rate under both heads shows an increase of 577 and 409 per mille, against 523 and 313 in the previous year. The death-rate per mille of all cases was 125·79, against 146·7 in 1884. The results of the *surgical operations* in the Medical College Hospital were more satisfactory than in the previous year. There were 394 operations, of which 30 cases proved fatal, against 416 operations with 52 deaths in 1884. There were six cases of erysipelas during the year, of which three proved fatal. The disease on its appearance was promptly stamped out with complete success. It is now shown to be completely under control. The *Eden Hospital* continues to grow in public estimation. One thousand five hundred and seventy-five women and children were treated, against 1,390 in the previous year. The death-rate in confinement cases, although many patients were admitted in a hopeless state, decreased from 29 to 22, although the number of cases was 432, as against 379 in 1884. The *system of nursing* established at the Medical College and General Hospitals under the superintendence of the ladies of the Clewer Sisterhood worked with marked success, and was reported on in the highest possible terms. The Lieutenant-Governor desires to add his testimony to the valuable services which this institution has rendered to the cause of medical charity in Calcutta. The total *expenditure* for the year was Rs. 4,23,236, which exceeds the amount expended in 1884 by Rs. 9,921. The net cost to Government of all the hospitals, including the voluntary lock hospitals, which are now entirely supported by Government, amounted to Rs. 2,71,349, against Rs. 2,70,400 in 1884. The amount of invested capital rose from Rs. 5,53,300 to Rs. 5,54,300.

During the year 1885 seven new institutions were added to the 230 *dispensaries* under Government supervision, and four were closed or removed from the Government list. At the end of the year there were therefore 233 in operation. Twenty-four Assistant Surgeons were received by transfer from the Imperial list, and 18 Civil Hospital Assistants were admitted into the service. It was pointed out to the Government of India that the limit of age for the entrance of Assistant Surgeons into the service of Government should be raised. So long as the limit remained at 25 years, it pressed hard on many of the best students, especially those who commenced the study of medicine after taking the degree of Bachelor of Arts. Since the close of the year the Government of India has ordered that the limit of age for the entrance of Assistant Surgeons into the service of Government in Bengal should be raised to 28 years. In-door patients were received by 136 dispensaries, as against 132 in the previous year. The returns show 25,766 in-door patients, being a slight increase, and 960,218 out-patients, being a small decrease, on the figures of the preceding year. There was an increase of from 14·75 to 15·59 per cent. on the mortality among the in-patients. The total income of the dispensaries was Rs. 5,08,683, of which Government contributed Rs. 18,659. Rs. 16,872 were realised by subscriptions from Europeans, and Rs. 1,06,184 by subscriptions from natives. The total expenditure was Rs. 4,71,942, and the cash balance at the close of the year Rs. 36,740.

There were 919 persons in the five native *lunatic asylums* on the 1st January 1885. During the year 214 persons were admitted and 13 re-admitted; 93 were discharged cured, 26 were made over to the care of friends, 4 are reported to have been discharged "otherwise," and 73 died. There thus remained 955 persons at the close of the year. The percentage of recoveries, calculated on the mean daily population, was 9·89, as against 9·77 in 1884. Of causes of insanity the chief were, as usual, intemperance and excessive use of *ganja*. Nine cases only are attributed to hereditary predisposition. The total expenditure was Rs. 86,171, against Rs. 91,695 in 1884. The average cost of a lunatic's daily diet was one anna six pies. At the end of the year there were 29 patients at the European Lunatic Asylum: 13 of them were Europeans, 14 East Indians, and 2 Armenians. The total expenditure was Rs. 19,731, towards which the friends of paying patients contributed Rs. 12,338.

The number of in-patients treated in the voluntary *lock-hospitals* during 1885 was 414, or an increase of 81 on the figures for 1884. There were four cantonment lock-hospitals—at Dánápur (Dinapore), Darjiling, Barrackpur, and Dandam. The results of these on the whole do not differ materially from those shown in the reports for the previous year.

At the *Chemical Examiner's* laboratory 2,313 analyses were performed in 1885, as against 2,749 in 1884. The decrease of 406 analyses was principally in cases of opium, salt, and spirit examined for deleterious adulterations. Under the last head a large number of samples had been examined in 1884 for the Excise Commission. An interesting report was furnished on Australian and Kashmír wines. It is said that the Kashmír clarets compare most favourably with the imported clarets; and when we are acquainted with the extent to which French wines are adulterated, it becomes a matter of surprise that our locally-manufactured wines are not more largely used.

SANITATION.

The year under report (1885) was generally unhealthy, cholera and fevers having prevailed to a greater extent than in the previous year. The heavy inundations which prevailed had effects of a twofold character. On the one hand they destroyed the agricultural outturn wholly or partially, and caused heavy loss of cattle, while on the other hand they exercised a great power for good by diminishing sickness in the great majority of the localities where this occurred. The price of food-grains ranged high, and gave rise to much distress, which reacted most unfavourably on the public health.

Recorded deaths from *cholera* numbered 173,767, the disease being still more fatal in its effects than in the preceding year, for which the figures are 134,421. The ratio per mille of population was 2·62, against 2·03 in 1884. It was most fatal in Bírbbhúm, Maldah, Purí, Rájsháhí, Cuttack, and at the large Rath játra festival at Purí, and the fair at Sudágbágh in Murshidábád. The localities affected were invariably found to be in an insanitary condition, and the inhabitants were frequently predisposed to disease. The months of greatest mortality were March, April, and May, but August, exceptionally, showed the highest figures of all. This was caused by the incidence of the disease in the Bihár districts, which are visited most severely in the rainy season. The heavy inundations of September greatly reduced the mortality during the winter months. The recorded deaths from *small-pox* fell from 18,537 to 9,863. More than 75 per cent. of the mortality was amongst infants and children. The disease was most prevalent in the towns of Dacca, Bettia, and Rániganj, and in some parts of Champáran. *Fevers* prevailed to a very large extent during the year under review. The recorded deaths amounted to 1,042,142, against 966,233 in 1884. The increase is, however, said to be due to improvement in registration, and should not be taken as showing that these provinces are generally getting more feverish. The recorded mortality from *bowel-complaints* was 63,808, from *injury* 28,956, and from *other causes* 186,209.

There was improvement in the percentage of municipal income expended on *sanitary works*, but that expended on roads diminished. The towns in which the largest proportion of municipal income was devoted to sanitary improvements were Hazáribágh, Dacca, Midnapur, Jessor, and Bardwán. The Bardwán water-works have now been completed, and the same may be said of the water-works at Bhagalpur. Arrangements have been made for improving the supply of drinking-water at several of the stations on the Eastern Bengal Railway.

VACCINATION.

The Vaccination Department continued to work satisfactorily. In addition to the areas protected in former years, the Compulsory Vaccination Act was extended to the Chattra, Muzaffarpur, Siráiganj, and Arrah municipalities. Less resistance is now being offered to vaccination, and during the year many of its most powerful opponents were led to accept it.

The *operations* performed numbered 1,368,996, against 1,458,296 in the previous year. The decrease is attributed partly to the paucity of unprotected subjects in the areas in which the Government agency was employed, and

partly to the inefficient manner in which the work was carried on by municipal agency. The principal increase was in the Dárjiling and Orissa circles, and the principal decrease in the Ránci and Eastern Bengal circles. The operations performed with bovine lymph were not as successful as in the previous year, but the lymph is still favourably reported on. The failure of the virus is attributed to defects in storing it in tubes.

Rupees 1,66,711 were *expended* on vaccination, of which Rs. 76,709 represents the cost of the Government operators, Rs. 78,847 the cost of the establishment supervising licensed vaccinators, and Rs. 11,154 the cost of vaccinators to municipalities.

EDUCATION.

The most noteworthy fact in the educational history of the year was the disappearance from the returns of the Department, and the removal from departmental control, of 15,108 schools and 112,151 pupils. This important result was the outcome of a policy according to which the Government declared that no primary school should be recognised as eligible for rewards unless it had been in existence for six months, could produce ten pupils, used printed books in its ordinary course, and brought to the place of examination attendance and inspection registers properly kept. Owing to these circumstances lower primary schools within the cognisance of the Department diminished from 62,863 to 47,623, and the pupils attending them from 1,121,900 to 986,160. In all other schools other than lower primary, satisfactory progress was made, especially in English schools, both high and middle, and in the upper section of primary schools. Omitting lower primary schools, public institutions increased from 7,266 to 7,676, and their scholars from 320,941 to 342,120. Private institutions decreased from 2,512 to 2,234, but their scholars increased from 27,339 to 29,749. This decrease was most marked in Sanskrit and in elementary schools, while the increase is due to a large addition to the scholars attending Arabic and Persian schools. Taking scholars of all kinds, those recorded as attending high, middle, and upper primary schools increased by 9,886, while those shown as attending lower primary schools diminished by 125,436. The total amount expended decreased from Rs. 78,15,000 to Rs. 76,48,000. The Government expenditure decreased by Rs. 90,000 owing to the reductions effected during the year, and the total expenditure by Rs. 1,67,000, owing to the exclusion of the 15,000 small schools already mentioned. The only large increase in Government expenditure was under the head of superintendence, and it arose from increases of salary paid to third-grade Sub-Inspectors, and from the appointment of three Assistant Inspectors.

The recommendations of the *Education Commission* have received attention from Government, with the following results. The papers relating to a proposal for giving increased aid and support to Sanskrit tols have been published for general information. The inspection and examination of primary schools *in situ* are being carried out to the utmost extent possible with the present limited agency; the position of the subordinate inspecting officers has been improved, and additions have been made to their numbers. In the field of secondary education the proposal to establish an alternative standard at the Entrance Examination, in the future interests of technical instruction, has been referred to the University. The policy of handing

over colleges to local authorities is being carried out, and a college under private management has recently been opened in Jessor. A native gentleman has been promoted to the superior grade of the Department, and he has been appointed to officiate as Inspector of an important circle. The education of Musulmáns has received careful attention; and sanction has been accorded since the close of the year to the creation of 20 special scholarships awardable to Muhammadan students on the results of the University Entrance, of 20 on the results of the F.A., and of 2 on those of the B.A. Examination. The proposal to appoint two Muhammadan Assistant Inspectors on salaries of Rs. 200 to Rs. 300 a month is under consideration. Every Division in Bengal has now a Joint or Assistant Inspector of its own, acting under the orders of, and in close communication with, the Circle Inspector. The way in which the Local Self-Government Act has affected education will be found noticed in the chapter on Administrative Changes.

The Government expenditure on *collegiate education* was Rs. 3,15,000, and the total expenditure was Rs. 5,47,000. The number of colleges increased from 25 to 26 owing to the opening of a college class in connection with St. Paul's School, Dárajíling. The number of students at all colleges increased from 2,779 to 2,998, and the cost to Government of each student in the Government Colleges fell from Rs. 269 to Rs. 267. In the Calcutta University the percentages of passed candidates for the F.A. Examination in 1886 were in Government colleges 58, in aided 45, and in unaided 49. At the B.A. Examination, out of 712 candidates 56 per cent. passed. In 1885, 72 per cent. passed, the less favourable result in 1886 being explained by the large increase in the number of B.A. candidates in that year. The first examination for the M.A. degree under the new regulation was held in November 1885. The number of candidates fell from 71 to 43. The standard for the degree was considerably raised in correspondence with the revised standard for honours in the B.A. Examination, and those who took the B.A. degree under the old regulations in many cases found the new M.A. standard too high for them. Thirty of the candidates were successful.

On *secondary education* the Government spent Rs. 5,85,000, and the total expenditure was Rs. 25,01,000. Schools for secondary education are of three kinds—high English, middle English, and middle Vernacular. High English schools numbered 255 with 56,316 pupils. The schools increased by 16, and the scholars by 4,608. There was a serious decline in the proportion of successful candidates at the last two Entrance Examinations of the University. The decline affected all schools and all provinces alike; and the University appointed a Committee to inquire into the subject. Middle English schools numbered 716, with 50,374 pupils, being an increase of 21 and 2,660 respectively. Middle vernacular schools increased from 1,140 to 1,141, but their pupils diminished from 66,011 to 63,944. The number of successful candidates at the middle vernacular scholarship examination was 3,111, or very nearly the same as last year.

On *primary education* Government spent Rs. 5,87,000, and the total expenditure was Rs. 24,53,000. There were 50,703 primary schools with 1,009,496 pupils dealt with by the Department. The decrease in their number has already been alluded to and explained. The Government expenditure on this class of schools is larger than on any other, but the total expenditure is exceeded by that on secondary education.

On promoting *female education* Government spent Rs. 1,44,000, the total expenditure being Rs. 5,03,000. Good progress was made in the development of this branch of instruction. There were 2,296 schools in which girls were taught, with 78,037 female pupils. There was a slight decrease in the number of schools, but a considerable increase in that of pupils. One girl passed the Entrance Examination from the Bethune Female School, and two the B.A. Examination, one of them, Miss Kamini Sen, taking honors in Sanskrit.

On *European education* Government expended Rs. 1,61,316. The number of schools, aided and unaided, for the education of Europeans and Eurasians, of which the department takes cognisance, fell from 69 to 62, and their pupils from 6,389 to 6,098. The reduction was due partly to the transfer of two schools to the head of charitable institutions, and partly to the non-submission of returns. The most important event during the year under report was the definite substitution of payment by results for fixed grants. In determining the new scale, the chief object was to disturb existing rates of aid as little as possible, and especially to avoid any sudden and large reduction in the monthly grant to a deserving school.

The percentage of *Musalman scholars* in all public and private institutions was 27.9, varying from 29 in professional colleges to 100 in the madrassas. The number of Muhammadans increased in Art Colleges and higher and middle English schools, but the number of those in primary schools fell considerably owing to the exclusion of small primary schools from the returns.

Little change occurred in the system of special instruction. As in the previous year, there were 25 *training schools*, in which there was some increase both in the number of pupils and in the number of those who gained certificates. The English Department of the Patna Training School was abolished. The number of *law schools* increased from 8 to 10 owing to the opening of law classes in connection with the Ripon and Jagannáth Colleges. The average roll attendance of candidates rose from 765 to 947. In the *medical schools* the total number of students declined from 804 to 752. The hostel for female students of medicine, which has been constructed from the munificent gift of Rs. 1,50,000 made by her Highness the Maharání Swarnamayí, is now complete and ready for occupation. It has been decided that girls shall be eligible for admission after passing the University Entrance Examination, and that on passing the College examination after a three years' course of classes and practical instruction they shall be entitled to certificates qualifying them to practise medicine, surgery, and midwifery. At the *Sibpur College* the number of students rose from 149 to 156. The apprentices have no difficulty in obtaining employment, partly owing to the excellent workshop training they received. The *School of Art* in Calcutta suffered a serious blow on the death of Mr. H. H. Locke, who, during the many years of his Principalship, laboured to raise the institution to a high point of excellence. He was succeeded by Mr. Schaumberg, whose services promised to be of great value to the school, specially in the development of industrial art, but he also unhappily died very shortly after his appointment. Temporary arrangements have since been made pending the appointment of a Principal from England. Progress is being made in the wood-carving and metal-chasing classes. The model class promises well, and the resuscitation of Indian decorative art is also being attempted. There are eight *industrial schools* in Bengal, four of which receive grants from Government.

The number of pupils coming under the head of *aboriginal and backward races* declined from 33,151 to 29,906, owing to the general causes already described. A Kol passed the University Entrance Examination from the Ránci, school. This is the first instance of a pupil of aboriginal birth being successful at any University examination.

The total number of *indigenous schools* on the returns, including *tols* in which Sanskrit is taught, *maktabs* in which Arabic and Persian are taught, and others, fell from 2,512 to 2,234, but the pupils increased from 27,339 to 29,749. The Sanskrit Title Examination was held in April 1885, at which 36 out of 106 candidates passed. In February 1886 a second examination was held under revised rules and with a more difficult standard, at which again 36 candidates passed,—this time out of only 58 candidates.

ART, LITERATURE, AND THE PRESS.

None of the publications during the year which fall under the head of *Art* call for special notice.

Ten *English newspapers* were published in these provinces during the year—7 in Calcutta, 1 in Dárjiling, 1 in Dacca, and 1 in Patná.

Sixty-three *Vernacular newspapers* were supplied to the Bengal Library during the year, of which 7 were monthly, 3 fortnightly, 46 weekly, 1 bi-weekly, and 6 daily. All were published in Bangáli, with the exception of 7 in Hindi, 7 in Uriya, 5 in Urdu, 2 in Assamese, and one in Persian. Twelve new papers were started, while 17 ceased to exist,—a net decrease of 5. As before, the weekly newspapers appear to be the most popular, the *Bangabási*, with a circulation of 20,000, heading the list. Most of the others have a circulation below 1,000.

Regarding the *tone of the native press*, there is little to add to what has already been recorded on the subject. Of the purely local papers published up-country, it appears that they exercise no political influences, and that they only circulate local news or such information as they collect from Calcutta newspapers and telegrams. There is, however, a growing tendency on the part of such prints to take their inspiration from the Calcutta Vernacular Press as to their criticisms of public affairs; and it is to be regretted that the attitude and tone of the Native Press of the metropolis is generally antagonistic to both the legislative and the administrative action of Government, and this in writing which cannot be described as coming within the limits of temperate and reasonable discussion. Beyond this there is too often the exhibition of a spirit of rancorous hostility to the European community, made with the deliberate intention of keeping alive differences between Europeans and natives. Even if charges alleged against Europeans are proved upon inquiry to be false, these charges are persisted in, and the judicial tribunals are accused of partiality and bias. There is little doubt that the editors of, and writers in, these newspapers are generally disappointed placemen or schoolboys, many of whom are brought up and taught in schools by men who inculcate that a spirit of insubordination is a spirit of proper independence. But perhaps the most mischievous influence which unscrupulous native papers now exercise is in the terrorism they exert over native officials, deterring them from the effective discharge of their duties.

There were 2,731 books received at the *Bengal Library* during 1885—a number which shows a steady increase. Of unilingual books, exclusive of periodicals, 1,996 were received, of which 1,206 were in Bangáli, 247 in English, and 158 in Hindi. The subjects dealt with chiefly were religion (467), language (393), poetry (229), fiction (144), and history (97).

Copyright was registered in the case of 2,526 publications.

Several important works were issued from the *Bengal Secretariat Press*. A list of them will be found in the body of this report.

ARCHÆOLOGY.

During the year the new arrangements which were made on the retirement of General Cunningham came into force, and the work of exploration was commenced by the newly-appointed staff. New discoveries were made in the Sháhábád district, where the hitherto unexplored fortress of Shergarh was partially examined. An important discovery was made in Gaya of the remains of one of the great monasteries mentioned by Fa Hian, which had baffled the search of previous explorers. In the Monghyr district several new inscriptions of the Muhammadan period have been obtained, but the most important and interesting building—the Zanjiri Masjid—was found to have been demolished. Some curious Buddhist and Brahmanical remains were found buried beneath the floors and built into the walls of the Masjid. In the Maldah district the Adina Masjid has been measured, and materials for adequately illustrating this—one of the most ancient as well as the greatest of the Muhammadan monuments of Bengal—are now being worked up.

ECOLESTIASTICAL.

The *ecclesiastical establishment* paid entirely or partly by the Government of these provinces at the close of the year consisted of the Bishop of Calcutta and his Chaplain, the Archdeacon, the Registrar of the Diocese, 17 chaplains of the Church of England, 1 chaplain of the Church of Scotland, 10 ministers of the Additional Clergy Society, and 6 priests of the Roman Catholic Church. Fifteen marriages were registered under the *Brahmo Marriage Act*, viz. 9 at Calcutta, 1 at Dacca, 3 in the 24-Parganas, and 2 at Motshári.

STATIONERY AND PRINTING.

The total value of the *stationery* issued was Rs. 19,80,618, showing an increase of Rs. 1,37,846 over the figures of the previous year. The value of the stationery supplied to officers of this Government (Rs. 4,73,637) is about the same as last year. The *local purchases* made during the year exceeded those of the previous year by Rs. 74,218, the chief increase being in country paper. A saving of Rs. 15,620 was effected by the system of supplying up-country stations with paper direct from the mills. Healthy competition has improved the quality of the paper and lowered the price, and it is anticipated that, except as regards the superior kind of writing and drawing paper, the Government will in future be almost independent of supplies from Europe.

The Committee appointed to report on the *organisation of the Stationery Office* in all its departments, and on the system of accounts, indents, and supplies, submitted a full report, making several important proposals. Most of these have been approved by Government. The question of providing more suitable accommodation for the Stationery Office is pending the consideration of Government.

The outturn of the Jail, Secretariat, and Dárjiling *presses*, and of receipts in the Publishing Department, was Rs. 4,45,721, and the actual expenditure was Rs. 3,04,632. The profits of the Jail Press show a considerable rise. The expenditure in the Secretariat Press shows an increase of Rs. 10,973, which is due to steady increase of work, the outturn having risen from Rs. 2,28,368 to Rs. 2,50,125.

ZOOLOGICAL GARDENS.

The *income* of the gardens, including the Government grant of Rs. 20,000, amounted to Rs. 46,338, against Rs. 52,097 in 1884-85. There was decrease under all heads of income except rents, which improved by about Rs. 600. The *expenditure* of the year amounted to Rs. 39,406. The most important *works* of the year were the re adaptation of two of the houses, the building of a masonry house for the sambars, and the filling up of an old tank.

During the year *season tickets* were issued at low rates, which after being held for a certain number of years entitle the holders to become life members without further charge.

Several *acquisitions* of interest were made during the year, amongst which may be mentioned a young hippopotamus and a Polar bear. The latter has, with the assistance of 15 seers of ice daily, got safely through the hot weather.

As mentioned last year, the whole of the imported stock on the *dairy farm* and cattle-breeding establishment perished during the year owing to an unfortunate outbreak of rinderpest.

ECONOMIC MUSEUM.

The removal of the museum to the buildings adjoining the Imperial Museum was completed during the year. In three of the courts the exhibits have been completely rearranged and catalogued, and the greater number of them have been correctly labelled.

The Imperial Museum handed over during the year a collection of over 3,700 ethnological specimens to the Ethnological Court of the Bengal Museum, which now contains over 6,500 exhibits.

Free admission to the museum was stopped in December 1885, during the continuance of the preliminary exhibition of articles intended for the Indo-Colonial Exhibition. During the remaining eleven months of the year 270,553 persons visited the museum, the monthly average being 24,505. This is by far the largest number yet recorded, and is no doubt due to the removal of the museum to a better site.

The cost of the museum amounted to Rs. 10,966.

PART II.

REPORT

ON THE

ADMINISTRATION OF BENGAL, 1885-86.

REPORT FOR THE YEAR 1885-86.

CONTENTS.

I.—POLITICAL.

	PAGE.		PAGE
CHANGES OF ADMINISTRATION—		Military Force and Frontier matters	6
Agricultural Department in Bengal	1	Education	7
Appointments to the Opium Department	1	Dispensaries	7
Working of the Bengal Tenancy Act and the rules under it	1	Post Office	7
Transfer of the Salt Department in Orissa to the management of the Commissioner of Salt Revenue, Madras	1	Boundary matters	7
Education	2	Tributary States of Orissa	7
Emigration	2	Weather, crops, and material condition of the people	8

ADMINISTRATION OF BENGAL, 1885-86.

I.—POLITICAL.

Changes of Administration.

THE period of two years for which the Agricultural Department in Bengal was sanctioned experimentally expired on the 30th December 1886; and the Lieutenant-Governor, after the close of the year under report, recommended to the Government of India that the Department should be permanently sanctioned. The experience of its working during the period of its probationary trial shows that it is of great use, and even necessary, to the administration for settlement purposes, and it affords a valuable agency for agricultural enquiry and improvement, and for the collection of agricultural statistics. The Department will contribute materially to the efficiency, and therefore to the economy and productiveness, of land revenue settlements, and facilitate to an appreciable extent the progress of agriculture—the great source of wealth in the Lower Provinces.

Rules for the admission of natives of India of unmixed descent to the higher grades of the Opium Department by selection were published after the close of the year. Candidates may be residents either of Bengal or of the North-Western Provinces. They are required to produce (*a*) a certificate of having passed the Entrance examination of the Calcutta University, or satisfactory evidence from competent authority of having received a good education up to the standard, at least, of the Entrance examination; (*b*) satisfactory certificates of their respectability and good moral character, countersigned by the Magistrate of the district in which the candidates reside, or by the Commissioner of Police if the candidates are residents of Calcutta; (*c*) a certificate of health and physical fitness from a Government medical officer; (*d*) a certificate from a competent Government officer that they are able to ride and are of active habits. No person whose age exceeds 25 years will be eligible for admission into the Department unless he be already in Government service. A candidate considered eligible for such admission, and whose name has been approved by the Lieutenant-Governor of Bengal, or of the North-Western Provinces, will receive an intimation to that effect. A candidate appointed to the Department will be considered as a probationer for the first two years of his service. His confirmation in the Department will depend on the report which may be submitted by the Opium Agents as to the industry and intelligence with which he discharges his duties, and as to his fitness for service in the Department.

Act VIII of 1885 came into operation on the 1st November 1885, and was therefore in force during five months of the official year. A brief account of its working during that period will be found in the chapter on "Land Revenue." Rules under the Act were published in December 1885.

Working of the Bengal Tenancy Act and the rules under it.

The manufacture and sale of excise salt in Orissa having for some time been on an unsatisfactory footing, the salt administration in that Division has, at the instance of the Government of Madras, and with the approval of the Government of India, been placed under the management of the Commissioner of Salt Revenue, Madras, subject to the

Transfer of the Salt Department in Orissa to the management of the Commissioner of Salt Revenue, Madras.

control of the Government of Bengal. The principal improvements in administration which are expected by the transfer are—the concentration within more manageable limits of the manufacture of Kurkutch salt, which is now scattered over long distances; the improvement of the present system of storage and weighment of salt; the abolition of the rowannah system; the gradual abolition of the works for the manufacture of *panga* salt, which are at present both difficult of supervision and dangerous to the revenue; and the substitution of a departmental force for the present police force employed for preventive work. Arrangements are now being made, in communication with the Commissioner of Salt Revenue, Madras, for the preparation of rules and notifications under the Indian Salt Act, XII of 1882, which it is proposed to extend to Orissa. It is intended that the new rules shall completely take the place of the existing rules under the Bengal Salt Act, VII of 1864, and enable the administration of the Department to be carried on without interruption and inconvenience until such time as special legislation may be deemed advisable.

The rules made by Government under the Local Self-Government Act [Act III (B.C.) of 1885] provide for the transfer to

Education.

District Boards of the allotments for primary education and primary scholarships within the area under their control; of the grant-in-aid allotment for certain classes of schools; and of the net grants to all Government schools that are placed under the direct management of the Board. These rules are now in force in the sixteen districts to which the Act has been applied.

The administrative changes made during the year under the law which regulates inland emigration have been described in the chapter on Emigration.

Emigration.

In the report for the year 1884-85 mention was made of the passing of the new Municipal Act, III (B.C.) of 1884, which gave the people living within municipal limits the

Municipal.

right of electing their own representatives for the administration of local business. In the year 1885-86 a much larger measure of self-government was inaugurated by the passing of Act III (B.C.) of 1885, the object of which was to give all the inhabitants of these provinces a substantial interest in the management of their own local affairs. The District Road and School Committees had very limited powers, and these powers were generally exercised under close official control. The Committees hardly offered any attraction to men of education and ability who desired to participate in the management of public business, and they afforded no relief to the Government staff in the administration of the departments of work with which they were supposed to deal. The Local Self-Government Act will open for the people the field of usefulness which they desired, and will relieve Government officers of much responsibility.

Relations with Tributary States, and Frontier Affairs.

COOCH BEHAR.

The relations of this State with the Government have continued to be most satisfactory.

Two raids were committed during the year, both, it is believed, by certain trans-frontier Kukis; but nothing has yet been ascertained regarding the perpetrators of these crimes. In these raids four Chakmas were killed

CHITTAGONG HILL TRACTS.

Frontier Tribes--Raids.

and two wounded. The Deputy Commissioner of the Chittagong Hill Tracts states that owing to these raids, to the attack made on the sepoys' boats near Barkul in November 1883, to the outrages committed in 1884 on the Raisingha's village on the Sirthay range, and to the attempted raid on the Rainkheong valley in February 1885, the inhabitants of the villages near the frontier have for some time past been under considerable excitement. It appears, too, that the whole of the upper Subalong valley has been abandoned by the people, and there is now not a single Lushai or other Kuki village in the tract of country lying between the frontier line and the left bank of the Karnaphooli above Barkul falls. The closing of the bazars against the Howlongs, supposed to be concerned in some of these earlier raids, which was adopted as a punitive measure, does not appear to have had any practical effect, and other action will have to be taken to restore confidence within our limits.

The annual Lushai durbar and mēla was held at Rungamati from the 3rd to the 12th February 1886. Owing to the disturbances above alluded to, the mēla was poorly

Lushai durbar.

attended by our hill people, and was not so successful as in previous years. The Commissioner of the Chittagong Division remarked that of late the durbar and mēla have almost entirely ceased to fulfil the objects with which they were started, namely, the promotion of intercourse and the cultivation of friendly relations with the trans-frontier Chiefs. The Government have directed the holding of the next durbar at Demagri, as the Commissioner hopes for better results at that place.

As regards the frontier trade, the principal imports were rubber and wax, and the principal exports salt and tobacco. Both imports and exports showed a very large falling

Trade.

off, due to the closing of our bazars against all the Howlongs, with the exception of the friendly Chiefs Vankuma and Lalthoma. It was, however, reported that the trans-frontier people had obtained salt and tobacco from the floating traders in the Kassalong and Subalong valleys; but of such sales no statistics could be obtained.

The year was healthy and a fairly prosperous one for the people of Hill Tipperah. The cotton crop was injured by rain, but the rice crop was good, while the outturn of

HILL TIPPERAH.

Crops, public health, and material condition of the people.

oilseeds in the hills was above the average. The price of common rice rose from Rs. 2-4 per maund in the preceding year to Rs. 2-6, which was due to a short outturn of joom paddy in some parts of the hills. This rise was advantageous to the cultivators of the plains, as they never purchase, and generally have a surplus for sale. The average price of common rice during the years 1880 to 1884 was only Re. 1-7 per maund. The wages of labour are very high, being Rs. 14 per mensem for skilled labourers and Rs. 6-8 for unskilled labourers. These high wages appear to be due to the fact that the people are generally unwilling to serve for hire unless they can get some service under the State which gives them exemption from impressment for labour. As regards the material condition of the people, the Assistant Political Agent remarks:—"The unbroken

state of freedom from internal disturbance and external oppression, which the country has been enjoying for a series of years, has generated in the minds of the people a sense of security which itself is conducive to their general prosperity. The people are now more settled in their habitation, and more ready to invest their little savings in silver ornaments and brass utensils." Though raids from beyond the frontier and actual internal disturbances have ceased, still it is evident that the internal administration leaves much to be desired. It may be said that there is a "sense of security" compared with the feeling that existed years ago; but it is feared that that sense of absolute security, which is essential for the growth of a people's welfare and prosperity, does not exist in Hill Tipperah; and the remarks of the Assistant Political Agent are hardly in accord with the general tenor of his report, or with specific allegations made in other parts of it. For instance, it is stated that "the chief drawback to immigration is the want of full confidence in the general administration of the State on the part of the people living in the adjacent British districts, from which only immigrants are likely to come." Indeed, the marked contrast between British territory and the hill territory at their lines of contact appears to have forcibly struck both the Agent and his Assistant. On the British side there are stretches of cultivation and a teeming population: on the other side, scrub-jungle and a scanty population. On the British side there are numerous large and thriving villages, inhabited by the upper classes of the people; but on the hill side there is but one solitary Brahman hamlet, which is said to have been kept up only by the fostering care of the late Sub-divisional Officer. Nor is this preference for British rule confined to the upper classes. "The lower orders of the people also are not, as a rule, willing to come across the border to live in the Maharajah's territory, *which is not a very congenial soil for their growing desire for liberty.* The only advantage enjoyed by a resident subject of the State, viz. exemption from liability to pay taxes for cutting forest produce for home consumption, is not a sufficient inducement to any but the helpless." The system of land revenue prevailing in the State also acts as a deterrent in the matter of immigration. No ryot, it is said, can acquire a right of occupancy under any circumstances. Tenant right is almost unknown. The pernicious system of farming is allowed to be carried to an enormous extent, and farmers are selected, not from persons fit by their position and qualities, but from amongst the favourites of the Court, who, as a rule, allow their farms to pass on to the hands of others. For want of permanency of any one's interest in the soil, there is generally a want of good understanding between the cultivators and the actual collectors of revenue—a want which, it is admitted, "is most prejudicial to the cause of immigration." In all these matters, which affect the interests of an agricultural population, there is need for large measures of reform. The so-called "growing desire for liberty" appears to be nothing more than a desire to live in peace and security, free from oppression and oppressive taxation. The well-being of the people is almost entirely dependent on the character and quality of the administration. Since the close of the year under report Baboo Denonath Sen was appointed Minister with very full powers delegated to him by the Maharajah. He made a fair beginning to thoroughly reorganise and reform the administration; but he left the service and rejoined his appointment under this Government. The Maharajah has since appointed Baboo Mohini Mohun Bardhan, Government Pleader of Comillah, to be his Minister.

The exports are of the value of about six lakhs of rupees, or less by about Rs 26,000 than they were in the preceding year.

Trade and Commerce.

The decrease is due to the smaller demand for elephants. The chief articles of export are various sorts of forest produce, cotton, *til (sesamum orientale)*, wild elephants, parrots, dug-outs, molasses, and bamboo-work. The chief imports are food-grains (except rice), piecogoods, hardware, tobacco, dried fish, sugar, and fancy articles. Cotton is sent to Náranganj, whence it is forwarded to Calcutta for final shipment to Europe. No accurate statistics are available, but the quantity exported is estimated to have been about 20,000 maunds, or 4,000 maunds less than in the previous year. One hundred and thirty elephants, of the aggregate value of about Rs. 70,000, were exported, against 114 in the previous year. Brass manufactures and kerosine-oil are pretty largely imported, and umbrellas

are slowly finding their way to the interior of the hills. It is said that the export trade of the country might be considerably improved if there were greater facilities of communication. The rivers, by which all forest produce has to be exported, are difficult of navigation, the channels being in several places blocked up by snags and other impediments, while their sides are covered with almost impenetrable jungle. Moreover, trade is checked by the petty taxes levied by the State, and the rates of export duty are frequently changed by the farmers without the permission of the administration. The Maharajah's Minister applied for permission to have notices served along the border in British territory, that any British subject entering Hill Tipperah without the permission of the police would be treated as a trespasser, and that any one found in the hill territory with forest produce for which he could not account would be treated as a thief. The first request was refused. With regard to the second, the Political Agent has expressed his readiness to publish notices of the tolls due for forest produce, but has stipulated that they must be printed, and must state the places where, and the persons to whom, such dues are to be paid, and that similar notices must be published widely in the hills. The action was approved by Government. At present there is reason to believe that while one set of tolls is sanctioned, another is levied, and that attempts to levy the higher tolls lead to disputes along the border. With the exception of the Sonamura sâl reserves, the whole country is an extensive open forest. The splendid sâl forest of the Udaipur division is looked after as indifferently as heretofore. Twenty thousand trees are said to be fit for cutting now, and it is expected that an average of 10,000 might be cut in each succeeding year. As the forests are within a few miles of the river Gumti, which is the natural outlet for their products, there should be no difficulty in establishing a proper system of extracting the timber. Direct management may possibly not be practicable at present, but in a few years it should be feasible, and then the receipts from the forests would form a very considerable item in the revenues of the State. Hill Tipperah is naturally rich in many ways, but as regards manufactures the country is poor. This is due partly to poverty and want of enlightenment, but chiefly to want of due encouragement by the administration. Coal-mines have been discovered, and the coal on examination has been found good. Two years ago silver was found in the Lalmai hills (in the district of Tipperah), which belong to the Maharajah; but the cost of getting it was too heavy to make the working profitable. A collection of the raw economic products of the country was made and sent during the year to the Indo-Colonial Exhibition in London, together with a collection of the principal manufactures of the hill people.

The financial difficulties are said to have been as great as ever owing to the expenditure largely exceeding the income, and to the heavy load of debt by which the State is embarrassed. Owing to these difficulties, not only was it impossible to undertake any reform, but the ordinary expenditure could not be met with any degree of regularity. It is said that in a number of instances useless and unnecessary employes had to be retained in the service merely because the arrears of their salaries and allowances could not be paid; and on several occasions applications were made to the Agency by claimants who could not realise their dues from the State. This very unsatisfactory state of affairs is due almost entirely to the want of firmness on the part of the Maharajah, who encourages an expenditure far beyond the resources of his State. The principal sources of revenue, and the amounts derived therefrom, are as follows:—

				Rs.
1.	Tax on cotton and oilseed	64,351
2.	Tax on forest produce	57,511
3.	Land revenue from plain lands	41,044
4.	Family tax in the hills	21,920
5.	Royalty on elephants caught	14,558
6.	Tolls on the Fenny river	12,190
7.	Stamps and court fees	8,447

All revenue is collected by the officials of the State, except the tolls on the Fenny river which are realised by a British forest officer and remitted to the

Maharajah. No details are given of the expenditure; but the State has an administrative staff at Agurtolla, five Magistrates' Courts (three of which are at sub-divisions), four jails, three dispensaries, a police force, and five frontier posts guarded during the cold weather. It is estimated that by a careful settlement or khas management of the ghâts or toll stations, and by a proper supervision of the cotton and khedda mehals, the revenue of the State may be increased by over a lakh of rupees. The zemindaries in British territory yield from five to six lakhs of rupees, whereas, according to the road cess papers, they should yield more than eight lakhs. The total receipts for the year, as furnished by the Durbar, amounted to Rs. 2,43,824, against Rs. 2,38,724 in the previous year. The principal increase was Rs. 5,749 under the head of land revenue from the plain lands. The family tax in the hills shows a decrease of Rs. 1,657, which is due to the reduced condition of the hill people on account of partial failure of their joom crops. The present rate of the export duty on cotton is Rs. 2 per maund, or 40 per cent. *ad valorem*.

The Police Department, like all other departments of the administration, is in great need of reform. There were 652 criminal

Police and crime.

cases of all kinds, against 625 in the previous year.

Of these, 269 were investigated by the police. There were 2 cases of murder, 2 of culpable homicide, and 2 of dacoity. The remainder were mostly cases of hurt, assault, theft, mischief, criminal trespass, and bringing false charges. Of 776 persons actually tried, 507 were convicted and 262 acquitted or discharged. The number of cases in which British subjects were concerned rose from 180 to 223. The increase is due partly to the unwillingness of the people in certain parts to pay the forest dues levied by the State, and partly to the working of the rule by which British subjects in Hill Tipperah are debarred from acquiring a right of occupancy—a circumstance which, on the occasion of every renewed settlement of ryotwari holdings in the occupancy of British subjects, is liable to create disturbance if settlements are made with outsiders in supersession of the old holders. This rule still remains in force, though the Durbar promised to revise it.

The total number of suits for disposal was 281, against 287 in the previous year. Only 104 cases were contested, 69 being decreed in favour of the plaintiffs and 35 in favour

Civil Justice.

of the defendants. The aggregate value of the suits was Rs. 14,117-6-10, the total amount decreed being Rs. 6,491-15-5. The total amount of fees realised was Rs. 2,067-12, or about 14 per cent. on the amount in litigation. This is nearly twice the percentage of fees levied under the Court-fees Act. There were 83 suits in which British subjects were concerned, against 81 in the previous year. They were plaintiffs in 61, defendants in 6, and both plaintiffs and defendants in 16. In the civil courts British subjects appear more as plaintiffs, and in the criminal courts more as defendants.

There are four jails in the State—one at Agurtolla itself, and one at each of the sub-divisions of Sonamura, Koylashur, and Bilania. At the close of the year they con-

Jails.

tained 75 prisoners, against 87 in the previous year. There were 6 escapes. "The situation of these jails, which lie within a few paces of British territory, not only facilitates the escape of prisoners, but also tempts them to commit the offence."

The military force consisted of 273 men of all ranks, of whom 8 were Bengali-Hindus, 13 Christians, 113 Bengali-Mussulmans.

Military Force and Frontier matters.

It is said that these men belong to the cultivating

classes, and make very poor sepoys. The remaining 139, namely, 58 Goorkhas, 11 Assamese, 45 Hindustanis, and 25 Tipperahs and Manipuris, are, however, mostly reliable. In January and February there were vague rumours of Lushai movements, which caused some excitement amongst the people of Udaipur. But these rumours, as well as similar rumours from Bilania, turned out to be groundless. The three guard-posts of Dharmanagar, Cherakuti, and Kamalpur in the Koylashur division, the two posts of Udaipur and Eksari in the Udaipur division, and the post of Bilania in the Bilania division, were all duly garrisoned in the winter. Owing to extension of cultivation, the first post has had to be moved forward to an advanced position about four miles to the south-east of

the locality it hitherto occupied. The state of communications continues to be very bad.

The number of schools and pathsalas was the same as in the previous year, namely, 16 for boys and two for girls; but the number of students declined from 470 to 409. The

Education. teachers are said to be very irregularly paid, and there are no arrangements for inspection. The highest standards taught in the English and vernacular schools of the State correspond respectively to those fixed for the Minor and Vernacular Scholarship examinations under the Government rules. In order to make the schools more attractive, it has been suggested to the Durbar that the scholarships allowed by the administration should be tenable in schools outside the State. The visit of the Jubraj and the Bara Thakur to Commillah in September 1885 was quite an event in their otherwise uneventful lives.

There are four dispensaries in the State, in which 4,728 persons received medicines as out-door patients, against 4,009 in the previous year. There are no regular arrangements for in-door patients, and this want has been brought to the notice of the Durbar. The prevailing diseases were fever, bowel-complaints, sores, and skin-diseases.

There is no regular postal system under the management of the State, and it is said that the hill people are not in need of anything of the kind, as communication by letter is seldom carried on. The administration has special messengers of its own, who are used as dâk-runners when necessary. The only post office is attached to the Agency at Agurtolla, and continued to work satisfactorily. The value of money-orders issued during the year was Rs. 53,534, and that of insured covers Rs. 10,553, the former showing a decrease of Rs. 11,498, and the latter an increase of Rs. 5,158 as compared with the figures of the previous year. The increase indicates increased trade, while the falling off in money-orders is said to be due to the fact that several marriages in the Rajbari in the previous year occasioned unusually large remittances.

Some of the masonry pillars between Hill Tipperah and British territory are in a dilapidated condition, while some have been entirely destroyed. On the sites of three of the latter, iron pillars were erected during the year. The restoration of the remaining pillars is estimated to cost Rs. 1,165, and the work will be shortly taken in hand. A case of dispute regarding the jurisdiction over certain Tipperah *punjis* on the Sylhet side has been pending for some time, and the Assam Government have agreed to the proposal for a proper delimitation of the boundary between Hill Tipperah and Sylhet from Chooramun post to Udna post east. It has been arranged that a skilled surveyor should demarcate the boundary in the presence of a representative of the Maharajah, and the Commissioner has been directed to inform the Maharajah accordingly. Another portion of the boundary between Sylhet and Hill Tipperah has been relaid by the Assam Government, and the Maharajah has been informed that this boundary must be respected. It was clearly shown by the Surveyor-General that the boundary marks laid down by Messrs. Jones and Davey in 1864, in conjunction with Mr. Campbell, the Maharajah's representative, were not in their proper places, and there were strong reasons for believing that they had been moved further west by the Maharajah's people. Indeed, in one particular instance, namely, the Hatipara post, the villagers admitted having removed it.

As regards the Maharajah's zemindaries in British territory, the state of affairs is not satisfactory. The relations between the Maharajah's amla and his tenantry in Noakholly are so strained that the Collector is about to recommend a settlement under section 101 of the Tenancy Act. Matters are not quite so bad in Tipperah; but the Collector reports that great difficulty is experienced in realising the cesses, and he proposes to appoint a Cess Collector under section 99 of the Road Cess Act.

Of the Tributary States, Mohurbhunj, Dhenkanal, Baramba, and Nursingpur have continued under direct management, the remaining States being administered by their respective Chiefs subject to the general control and supervision of the

Superintendent. The whole demand on account of tribute from these States, Rs. 33,249-7-11, was realised during the year.

Taking the Gurjats as a whole, the rainfall was sufficient and well distributed except in certain specified tracts, and the crops were good. The winter crops were almost everywhere satisfactory, and generally the autumn crop was up to the average. The Superintendent of the Tributary Mohals states that the Gurjhat people are generally well off, their wants few and easily satisfied. The public health was generally good during the year. Cholera appeared in Dhenkanal station in the form of an epidemic, and gradually spread into the interior, and continued in a sporadic form for several months. There were isolated cases in several other States; but except in Baramba and Nursingpur, where the deaths reported were 160 and 400 respectively, the disease was not severe. Vaccine operations were carried on in Morbhanj, Talcher, Dhenkanal, Angul, Baramba, Nursingpur, and Ranpur, with more or less success everywhere except in Talcher, where the people are opposed to it. There are 11 hospitals, where English medicines are dispensed, and two others were about to be established in Boad and Dhenkanal. There is nothing to remark under the head of roads and communications except that a new road is to be made from Cuttack to Angul, and is now in course of construction.

Civil and Criminal litigation. The total number of civil and revenue suits for disposal during the year, including 2,805 pending from the previous year, was 13,091, against 15,678 in 1884-85; 10,854 cases were disposed of, leaving 2,237 pending at the end of the year. Many of the States show hardly any cases at all. Of the 10,286 cases instituted during the year, Morbhanj alone had 4,529, Dhenkanal 2,490, and Baramba 1,733. The total number of appeals in civil cases was 233, and in revenue cases 53.

The total number of criminal offences reported was 2,231, against 1,725 in the previous year and 1,456 in 1883-84. Of these, 1,763 were returned as true. Of 3,150 persons under trial during the year, 1,191 were acquitted or discharged and 1,881 convicted. There were 29 offences affecting life, against 28 in the previous year, and 353 cases of hurt and criminal force, against 290; so that crimes of violence slightly increased. Offences against property also increased, there having been 459 cases of theft, against 441, and 141 cases of mischief, against 77; but cases of criminal trespass declined from 155 to 109. There were 41 cases of defamation, against 28 in the previous year. Morbhanj contributed 632 of the total number of cases reported and brought to trial during the year, Angul 250, Dhenkanal 228, Nursingpur 146, and Baramba 137. Morbhanj had no fewer than nine murders, culpable homicides or attempts. The total number of appellants and applicants for revision was 137; the sentence or order was confirmed in 101 cases, reduced or altered in 8 cases, and reversed in 13 cases.

In accordance with the instructions of the Government of India, arrangements have been made, as an experimental measure, for the trial of offences committed in the Tributary Mehals within the limits of the Mehals themselves. Four centres have been selected within the Mehals, where sessions are to be held by the officer for the time being Collector of Balasore in his capacity of *ex-officio* Assistant Superintendent of the Tributary Mehals, specially vested with the powers of a Sessions Judge for that purpose. Three or four sessions will be held during the year at Kantilo and Dhenkanal; and Morbhanj will be visited and a sessions held by the Superintendent during his cold-weather tour, the Assistant Superintendent going once or twice a year besides to Morbhanj and Nilgiri if any necessity for his doing so arises.

The execution of civil decrees passed in the States against British subjects resident outside of the States is a subject of much importance which has been under the consideration of Government; and the Superintendent of the Tributary Mehals has therefore been requested to formulate and submit, for the approval of Government, a rule which would cover all classes of cases of this description.

Forest conservancy. During the year an addition was made to the Government reserved forests of Angul by adding the Durgapur block. When the settlement of this estate is taken in hand, the whole of the exterior boundary will have to be demarcated. Up to the end of the

official year no fires occurred in the reserves. There were some disputes between the villagers and the Forest Department as to the area available for grazing, and the villagers have agreed to pay small grazing fees during the months from June to November. At Tikarpara an experimental nursery of about half an acre was made on the bank of the Mahanuddi, and toon, babul, and teak seeds were sown. The revenue from the forests is slightly increasing, but is not yet sufficient to meet the charges incurred. The Conservator and his Deputy visited the Khondmal forests, and the question whether any reserves should be formed is now under consideration. The Tributary Chiefs of Ranpur, Nyagur, Athmalik, Khandparah, Athgur, and Boad have either reserved or protected their forests. In Baramba and Nursingpur, now under direct management, the cutting of timber trees has been prohibited. Valuable timber is preserved in Morbhanj and Hindole, and to a certain extent in Dhenkanal.

There has been no change in postal lines or communications. An arrangement with the Chiefs was made for an annual contribution on the understanding that as soon as the postal lines begin to pay, they would be entirely relieved of the cost of their maintenance. As some of the post offices do not yet pay their way, the Postal Department does not seem to be willing to take over the entire responsibility. The Superintendent has remarked: "There now seems to be some unwillingness on the part of some of the Chiefs to continue the subscriptions; and if they cease to pay, and the Postal Department does not take them over, the entire scheme must fall to the ground, which will be a matter of great regret, not only from a commercial, but also from a political point of view." There seems no doubt that the postal lines and arrangements must very shortly become self-paying, and it is to be hoped that the Chiefs will have the wisdom and public spirit to continue their subscriptions until this result is attained. The Postal Department cannot be expected to do more than it has done, and the Superintendent has been requested to lose no opportunity of impressing on the Chiefs the importance to themselves of not withdrawing from the arrangement entered into.

The number of schools at the close of the year was 1,215, against 1,151 in the previous year; the number of pupils was 11,956, against 14,836. The aggregate number of children of the aboriginal races was only 1,509. Morbhanj, Athgur, and Hindole showed a marked decrease in the number of lower primary schools, while the number in Nilgiri increased from 48 to 81. In some cases the decrease is apparent and not real, owing to the reduction of the reward fund, which means that some of the schools have not come under inspection and the reward system. Of the 33 upper primary schools, 3 in Angul were maintained by Government, 6 in the Khondmals by a local cess on grog-shops, and 24 by the Native States. There were 6 female schools as compared with 4 in the previous year, attended by 97 girls. Two hundred and sixteen read in boys' schools, and, out of 313 (the total number being educated), 149 can read and write. The total expenditure on schools (including Government expenditure) was Rs. 66,786, against Rs. 59,364 in 1884-85. The Government grant was Rs. 8,042. The inspecting staff has been slightly increased, and now consists of five Sub-Inspectors and nine inspecting pundits.

There are mines of limestone, mica, and coal in Angul. The coal may be worked at a profit if the proposed railway passes through the estate. The existing settlement will expire in 1887, and it is proposed to commence the resettlement in the ensuing cold-weather. The present rates are very low, and a considerable area of jungle land has been brought under cultivation since the last settlement. The present land revenue demand of the estate is Rs. 32,916-3-4½. The total area of rent-free or quit-rent life tenures was 32,073 acres, and of this amount 22,570 acres have been resumed on the death of the original grantees. The excise revenue increased from Rs. 1,620 to Rs. 1,998-1-4. Owing to the introduction of the Court-fee and Stamp Acts from the 4th December 1885, the number of suits has decreased, but not to any appreciable extent. A sum of Rs. 1,289-12-7 was expended on works of improvement.

The total revenue demand of Morbhanj was Rs. 2,88,146-15-6, of which Rs. 1,95,956-3-2 was collected during the year and Rs. 10,635-4-8 was remitted. The pergunnahs

Post Office and Education.

Angul.

Morbhanj.

Panchpir, Kainsari, Sanikola, and Poradiha were under measurement with a view to resettlement, and a report has been submitted to Government regarding Bamunghatti, the settlement of which is about to expire. The new building for the dispensary at Baripáda, which is a commodious and substantial building, was completed during the year, and a branch dispensary was opened in Bamunghatti. As regards education, it is a significant fact that a Santál was serving the State as an inspecting pundit, and a Santál boy, who had got a scholarship at Baripáda, was studying in the Balasor Zillah School; but unfortunately they both died during the year, which led the Santáls to think that education brings evils on them, and many withdrew their children from the schools. Mr. Wylly, who was in charge of the State throughout the year, is opposed to a regular forest system, as the State cannot afford it, and there are no roads for easy transport of timber; and the Lieutenant-Governor has no doubt that any present attempt to introduce regular conservation of the forests here would be premature; but there are certain small reserves which should be carefully maintained, and the wasteful cutting of valuable timber should be prohibited throughout the State. Baboo Brindabun Chandra Bhunj, brother of the deceased Maharajah, was in charge of Bamunghatti throughout the year.

The Chief of the Nilgiri State has practically retired from the duties of his office, and the entire administration is in the hands of Mr. Ricketts, a member of the Subordinate Executive Service, whose services have been lent to the Rajah. This State has constantly been a source of anxiety, and during the year a disturbance took place in Kharakpur owing to the surbarakars of six villages refusing to pay what was due from them as rent. The execution of decrees was resisted by force, the police were assaulted, and persons who had been arrested were rescued. Vigorous measures had to be taken to restore order, and the disturbance only quieted down after some of the ringleaders had been arrested and punished. The State has three stone-quarries, and the value of the stone-plates, cups, and other articles annually exported to Bengal is estimated at Rs. 50,000. The land revenue demand, including arrears, was Rs. 33,119-1-4, of which Rs. 28,527-4-3 was collected during the year.

The minor Rajah of Dhenkanal died during the year at the early age of 20. The succession of his only infant son has been approved by the Governments of Bengal and India. The total realisable demand of the State, including arrears, was Rs. 95,492-3-10, of which Rs. 83,492-6-6 was collected during the year. As the people to the north of the State had to travel more than 30 miles to head-quarters, a new sub-divisional office was established at Baisinga.

The total demand of the Keonjhur State for the native year 1292 was Rs. 87,854-0-3 $\frac{1}{2}$, of which Rs. 85,978-12-6 $\frac{1}{2}$ was on account of land revenue. With arrears, the demand amounted to Rs. 1,13,493-10-0 $\frac{1}{2}$, of which Rs. 80,509-5-4 was collected during the year. The total expenditure amounted to Rs. 63,559-12-5, of which Rs. 1,976-11-10 was Government tribute. The jail in Athgur is a miserable hovel, and the Rajah has failed to carry out his promise to build a proper jail. The Rajah is reported to be a hard landlord, and to think that the people have no rights in the land they cultivate. The settlement of killah Baramba, which was commenced in 1881 at the request of the people, is now almost complete, and the total land revenue demand of the State has been raised from Rs. 14,111-4-2 to Rs. 18,179-5-8, exclusive of the assessment on resumed jaghir and lakhiraj lands. This State was involved in debt when Government took charge of it. Not only have all the debts been paid off, but many works of improvement have been effected. In the Boad State it was the custom for the heads of pergunnahs to decide petty civil and criminal cases, and to impose small fines, half of which were retained by the headmen, and half credited to the State treasury. It was found, however, that the headmen had abused their powers, which were accordingly withdrawn from them by the Rajah. Boad is an extensive State, inhabited chiefly by aborigines, and the Superintendent has asked the Rajah to devise some ready means of administering justice near the homes of the people. The general administration of the Dasputla State is unfavourably animadverted on by the Superintendent, who had to interfere to

prevent oppression by the Chief. The state of the finances is said to be deplorable. The area of the State is 568 square miles, with a population of 41,608; the land revenue amounts to Rs. 11,000 only, of which about Rs. 1,000 go towards paying the Government tribute and postal charges. The present settlement will expire in two years, and if the Rajah only takes the trouble to conciliate his people he will be able to obtain a fair increase of revenue. The Hindole State has been in difficulties owing to the failure of the autumn crop, and considerable measures of relief had to be undertaken. A settlement has just been effected, by which the total assessment is increased from Rs. 21,683 to Rs. 34,857. The Rajah of Khandparah is said to be a hard landlord, and to think that his people have been created with the sole object of administering to his wants and comforts. There is evidently much needed in the way of reform, and but little chance of its being introduced except through the authority and influence of the Superintendent himself. During the whole of 1885 there were only four prisoners in the jail, all sentenced in one case for killing a bullock. The population of the State is 66,296. The Superintendent was unable to visit the Khondmals. The Khonds pay no land revenue, but a tax of 3 annas on each plough. This, together with an equal contribution by Government, constitutes the Khondmal Road Fund. The total demand of Nursingpur, including arrears, was Rs. 31,528-8-2½, of which Rs. 28,398-3-8 was collected during the year. A dispensary has recently been opened at the head-quarters of the State. The Superintendent has proposed to appoint a joint Forest Officer for Nursingpur and Baramba, and this proposal is now under the consideration of Government. Nyagur was not inspected during the year. Out of a total land revenue demand (including arrears) of Rs. 41,125-2-8, a sum of Rs. 40,196-5 was collected during the year. Of the total debts of the Rajah, amounting to Rs. 76,300-9-7, a sum of Rs. 31,005-5-8 was paid off during the year. A charitable dispensary was established during the year. The Rajah is kind-hearted but improvident, and readily runs into debt. The Superintendent states that several of the Chiefs are defrauded by foreign merchants, and he has republished a notification issued by the late Sir Henry Ricketts in 1838, to the effect that he (the Superintendent) has no legal power to recover debts due from Native Chiefs, and in future will not receive applications for assistance. This action has been approved by the Lieutenant-Governor; but the Superintendent has been asked to report to Government any case of real hardship. The finances of the Pal Lehera State are very bad, and the Rajah is deeply in debt. The total receipts of the State amount to Rs. 17,160-12-1, while the Rajah's debts amount to about Rs. 35,000. The term of the current settlement of Ranpur will expire in 1297 Umli. Rights of occupancy and transfer are recognised by the State, and large quantities of waste land (held rent-free for the first three years) have been reclaimed. The land revenue demand, including arrears, was Rs. 34,911, of which Rs. 25,992 was collected during the year. The management of the State during the year was satisfactory. The total income of the Talcher State is Rs. 39,322. This State was over-assessed in 1877, and in the case of a good many villages the assessment of the revenue has been revised and reduced, which indicates the justice and moderation of the Rajah. A pucca building is being constructed for the dispensary. The Superintendent, it is satisfactory to note, speaks very highly of the Rajah's administration. Since the close of the official year, the Rajah of Tigriria has died. He was a ruler of the old patriarchal type, and was much liked by the people of the State. The succession of his only son has been approved by the Government of India.

Mr. C. C. Stevens was in charge of the Chutiá Nágpur Division throughout the year, with the exception of the first ten days of it.

THE TRIBUTARY AND POLITICAL STATES OF CHUTIÁ NÁGPUR.

The rainfall was sufficient and the crops good in all the States except Udaipur, Gangpur, Korea, and Jushpur. The general health was better than in the previous year. Vaccination operations were carried on in the

State of the people, crops, and communications.

Sirgooja, Udaipur, Jushpur, Gangpur, and Korea Tributary States, as well as in the Political States of Khursawan and Seraikella. 91·8 per cent. of the operations were successful. In Sirgooja there were as many as 8,848 operations in 242 villages. No complaints were made against any of the vaccinators.

No new roads have been opened in most of the States. In Sirgooja the road from the borders of Palamow to the Matrunga Ghât is under construction. Large portions of the Chybassa-Purulia, the Chybassa-Midnapur, and the Chybassa-Khursawan road, which pass through the Political States of Seraikella and Khursawan, were maintained by the Singbhum Road Cess Committee. The Chiefs of those States should be pressed to contribute something to the maintenance of these means of communication.

Fifty-six cases were instituted in the Commissioner's office during the year, and 36 were pending from the previous year. Of the total of 92 cases, 76 were disposed of. There were 17 appeals of all kinds from the decisions of the Chiefs. Three decisions were confirmed, 6 reversed, 5 cases remanded, and 3 remained pending at the end of the year. Of 14 persons committed for trial by the Chiefs, 9 were convicted, 3 acquitted, and 2 were pending trial at the end of the year. There were altogether 648 cases of cognizable and non-cognizable crime, in which 1,242 persons (against 1,117 in 1884-85) were concerned; 697 persons were convicted, and 406 discharged or acquitted. There were 193 prisoners in jail at the commencement of the year, as compared with 136 at the commencement of the preceding one, and the number of new admissions during the year was 400, making a total of 593, against 653 during 1884-85. There was a total of 665 civil suits for disposal against 492 in the previous year. Of these, 547 were disposed of during the year, and 118 were pending at its close. About half these suits were for the recovery of bond or verbal debts, 56 were for possession of land, and 54 were for arrears of rent.

Rajah Raghunath Saran Singh Deo, the Chief of Sirgooja, and his Dewan, are again favourably spoken of. The Chief is most anxious to do what is right, and is just and moderate in cases in which his own personal interests are concerned.

Rajah Dharmjeet Singh Deo is the Chief of Udaipur. He seems to have bad servants, and in two most important cases it has been found that the Rajah's original proceedings were perfectly legitimate and regular, but that eventually over-zealous amla put him seriously in the wrong. The Commissioner of Chutia Nagpur is trying his best to obtain influence over the Rajah, and to show him that he has a personal interest in his welfare.

Rajah Protap Narain Singh Deo Bahadoor of Jushpur appears to be an able, energetic, and conscientious ruler. Owing to a partial failure of his eyesight, the judicial work is done by his son, acting under his advice.

Rajah Raghunath Sikhur Deo of Gangpur is said to be disposed to worry his subjects too much for special pecuniary contributions. It, however, appears that he has a difficult State to manage, the inhabitants possessing a large share of the cunning which is attributed generally to the Ooria character, and in the disputes between the Rajah and his subjects, the Commissioner found the latter to be principally in the wrong.

The state of affairs in Korea were not satisfactory. The only hope for the good government of this State lies in the Rajah's being well advised, as he appears to be unfit to govern without help. The Rajah of Bonai is on bad terms with his relatives and with important classes of his subjects. The Commissioner will ascertain more accurately the causes of these differences, and try to bring about more satisfactory relations. As regards Changbhakar, it appears that the Chief holds extreme views regarding his rights over his subjects. The Political State of Seraikella was well managed. The Thakoor of Khursawan being a minor, his property is now under the control of Government, and managed by the Deputy Commissioner of Singbhum with the assistance of a duly appointed manager. A quarter of the debt due by the State was paid during the year. The minor Thakoor is now in his 18th year, and the Deputy Commissioner has been taking steps to instruct him in law and zemindari management.

The tribute payable by the several States amounts to Rs. 4,686-2-9.

The question of increasing the allowance given to the Maharajah of Sikkim has been under the consideration of Government; but as the Maharajah has not adhered to the terms of the treaty under which he is to reside in his own country nine months of the year, the question has been dropped.

In consequence of internal dissensions in this State, it was considered advisable to delay, till the cessation of those dissensions, the payment to the Bhootan Government of the sum of Rs. 50,000 annually made under existing treaty engagement.

II.—ADMINISTRATION OF THE LAND.

Survey.

THE most important survey work carried on during the year was the experimental survey of pergunnah Bisarch in Muzafferpur cadastral survey. Muzafferpur, including therein a record of rights and settlement of rents. The operations were carried on under Chapter X of the Bengal Tenancy Act, and a notification under section 101 (3), was duly published in the *Culcutta Gazette* of the 1th November 1885.

The cadastral survey was conducted by a professional survey party under the superintendence of Colonel Barron, of the Survey Department, who recently completed successfully the survey of the Benares district. The work of record of rights and settlement of fair rents was carried on by Mr. Collin, c.s., with the assistance of two Deputy Collectors, under the immediate supervision of the Director of the Agricultural Department, who in this matter acted in subordination to the Board of Revenue. The officers of the Survey Department recorded the areas of holdings, facts of undisputed possession, of crops grown, and of irrigation. The maps and measurement records of each village, as they were completed, were at once made over to the revenue officers, who immediately proceeded to the village and determined and recorded the status and interests of all parties, from the proprietor down to the under-ryots. They also recorded the amounts of existing rents, and settled and recorded fair rents on the application of either landlord or tenant, and without such application, also, when it appeared that the tenant was holding land in excess of or less than that for which he was paying rent.

The total area cadastrally surveyed to the end of June 1886 was 110 square miles. The rents were recorded and the status determined of 15,876 tenants, while fair rents were settled on the application of either landlord or tenant in the cases of 3,516 ryots. Boundary disputes, of which there were 323, mostly of a petty character, were amicably settled, and in no case was an appeal made to the Special Judge from the decisions of the Settlement Officer. The tenants whose status was determined are classified thus :—

			Percentage on total.
Cultivating tenure and under tenure-holders	...	12	0 08
Ryots at fixed rates	...	636	4 10
Settled ryots	...	13,198	83 13
Occupancy ryots, but not settled	...	95	0 60
Non-occupancy ryots	...	992	6 25
Under-ryots	...	913	5 94
		<hr/> 15,876	<hr/> 100 00

In all cases in which fair rents have been settled, the existing rents have been recorded as fair. The law presumes that existing rents are fair till the contrary is proved, and does not permit of their reduction except on the ground of a fall in the prices of staple food-crops since the rents were last fixed, or on the ground that the area of the holding is less than that for which the ryot has been paying rent. Neither of these grounds for reduction in rent having been found to exist, existing rents have not been reduced. On the other hand, landlords have not shown that prices have risen since the rents were last fixed, nor have they adduced evidence that the ryots are holding land in excess of

that for which they are paying rent. Existing rents therefore have not been enhanced. Unauthorised cesses and abwabs have not been recorded.

The total cost of the operations of both survey and settlement to the end of June was Rs. 1,33,710, or 8 annas per acre on the area which had been cadastrally surveyed. Within this sum is included the cost of such non-recurring items as tents, camp equipage, travelling allowances to officers joining their appointments, and other charges which are necessarily incurred when a survey party is organised in a new district. It is not possible at present to give an exact estimate of the cost at which the combined operations of survey and record of rights might be done in this district by survey and settlement parties in full working order, as the results of the first field season are never a fair criterion; but, as far as present experience enabled the survey and settlement officers to form an opinion, it was anticipated that the total cost of the operations would not exceed $8\frac{1}{3}$ annas per acre. The success of the work, so far as it has gone, may fairly be judged by the absence of that friction and those difficulties which were expected in connection with it. There was no opposition and there were no obstacles of any kind.

Since the close of the year, the orders of the Secretary of State have been received that this experimental survey should, for the present, be abandoned.

The revision of the survey of Midnapur was practically brought to a close during the year. The work consisted chiefly of the measurement and testing of estates imperfectly measured, of the preparation of duplicate copies of settlement records pertaining to temporarily-settled pergunnahs, and of the correction of survey registers. Copies of 592 maps, 89 chittas and 95 khatians were made during the year. Two boundary disputes and 604 other cases were disposed of. The cost incurred amounted to Rs. 19,156, against Rs. 33,359 in the previous year. The office of the Junior Superintendent of Survey was abolished on the 30th June 1886. A few copies of maps only were left to be prepared, for which a small establishment was appointed under the Collector.

The demarcation of the boundaries of the Government lands on the sides of the Grand Trunk Road continued, and the work, so far as it related to the district of Hugli, was complete. The total area recovered throughout the entire length of the road in this district measured about 800 bighas of land, which are now under settlement. Of the 209 encroachment cases decided during the year, only 17 were adverse to Government. The cost incurred during the year amounted to Rs. 3,450.

The survey in Bānkura was not resumed till May 1885. The system of measurement originally followed was a cadastral survey showing each ghatwal's holding; but this procedure having proved exceedingly expensive, it was decided that the operations should be narrowed into a simple demarcation of the external boundaries of the ghatwali tenures. Thirty-seven boundary disputes were compromised and 166 cases disposed of. The field work was commenced in October 1885, and 577 tenures with an area of 17,201 bighas were measured in thanas Bānkura, Indas, and Kotalpur. The maps were also prepared simultaneously with the measurement. The demarcation was made on the basis of the thak survey, and resulted in a net increase of 750 bighas over the thak area. The total expenditure incurred during the year amounted to Rs. 4,714.

It is in contemplation to undertake a survey of the town of Calcutta in the interests of both Government and the Municipality. The Corporation have agreed to pay Rs. 10,000 per square mile towards the cost of the survey, and the balance of the cost, estimated to amount to Rs. 4,000 a mile, will be divided between Imperial and Provincial funds in the proportion of two-thirds and one-third respectively. Legislation being considered necessary, a committee was appointed to draft an Act, which, with the report of the committee, is now under the consideration of Government.

Settlements.

THE financial results of the settlement operations during the year, as compared with 1884-85, are shown in the statement below:—

YEAR.	ORIGINAL SETTLEMENTS.		RESETTLEMENTS.				SUMMARY SETTLEMENTS.				SETTLEMENTS PENDING AT CLOSE OF THE YEAR.	
	Num-ber.	Net. revenue.	Num-ber.	Net revenue.	Increase.	Decrease.	Num-ber.	Net revenue.	Increase.	Decrease.	Num-ber.	Estimated revenue.
		Rs.		Rs.	Rs.	Rs.		Rs.	Rs.	Rs.		Rs.
1884-85	158	23,305	485	76,712	5,161	154	68,027	2,979	1,618	5,70,202
1885-86	154	43,203	334	1,07,277	27,537	16,547	123	32,948	2,201	4	1,535	5,00,134

There were 154 original settlements, 334 resettlements, and 123 summary settlements, making in all 611 settlements concluded during the year. The revenue assessed was Rs. 2,43,518, being Rs. 56,130 in excess of that previously received. Of this increase, Rs. 43,203 resulted from original settlements, Rs. 10,990 from resettlements, and Rs. 1,847 from summary settlements. The number of settlements concluded in 1884-85 was 796 with a revenue of Rs. 1,68,005, and an increase of Rs. 25,503 only. The Divisions showing the heaviest increases during the year of report were—Dacca (Rs. 18,059), Chittagong (Rs. 10,995), and Patna (Rs. 14,322). The number of cases left for disposal at the close of the year was 1,535 with an estimated demand of Rs. 5,00,134. The allotment made for the operations was Rs. 78,200, and, as stated by the Accountant-General, the actual expenditure amounted to Rs. 73,463.

There was a net increase of Rs. 825 only. The pending settlements relate mostly to pharidari chakran lands in Bardwán and Húglí. The result of the litigation with the ryots of the Majnamuta and Jalamuta estates in the Midnapur district was reported last year. Eventually it was decided by Government to offer a reduction of three annas in the rupee to the general body of ryots, and to make this reduction the basis of a final settlement of all matters in dispute. The reduction is made upon the enhanced settlement jumma in the case of each ryot. A ryot whose jumma was not enhanced at the late settlement obtains no reduction. If the jumma of a ryot was enhanced, but the enhancement was afterwards modified after local enquiry, the reduction is made on the amount of jumma so modified. The reduction takes effect from the beginning of the Umli year 1293, answering to the 16th September 1885. A similar offer was made to the ryots whose cases were remanded by the High Court, but the great majority of the appellants refused to accept the terms. There were 133 appellants in all, 29 being tenants of the Majnamuta and 104 of the Jalamuta estate. The Majnamuta tenants, with one exception, accepted the compromise. In Jalamuta one tenant in Kalinde Balasi agreed to the terms, but the 103 ryots of pergunnah Erinch have all refused. The cases have come on before the District Judge for hearing since the close of the year, but the result has not yet been reported.

Presidency Division.

The net increase is Rs. 5,363, principally from original settlements in the Sunderbuns.

The settlements in this Division have resulted in a net increase of Rs. 2,703.

Rájsháhí Division.

The important settlement of Mircha Diar, in the Rájsháhí district, has been completed, and only

awaits the acceptance by Messrs. Watson & Co. of the terms proposed.

The net increase is Rs. 18,059, of which Rs. 11,612 are derived from original settlements, Rs. 5,160 from resettlements, and Rs. 1,287 from summary settlements. Two hundred and ninety-four cases, with an estimated revenue of Rs. 1,00,779, remained for disposal at the close of the year.

Dacca Division.

The settlements yielded a net increase of Rs. 10,995, viz. Rs. 8,042 in Tipperah and Rs. 2,953 in Noakholly. There were no regular settlements in Chittagong; but the new

Chittagong Division.

lands leased out gave an increase of Rs. 3,754 to the current demand. An important enquiry was instituted for the purpose of determining some undecided questions connected with the recent resettlement of the short-term noabad talooks in Chittagong, and more particularly the question whether the khas turruf talooks and the resumed lakhiraj talooks had properly been brought under resettlement. It has now been decided that khas turruf and resumed talooks have been rightly resettled, and that 4,913 additional talooks are open to resettlement. Orders have been passed by Government that these 4,913 talooks shall be settled with the first of those to which the proclamation issued by Sir Henry Ricketts in 1818, as modified by the Government order of 1866, applies,—that is to say, in 1892.

There has been a net increase of Rs. 14,322, chiefly from original settlements in the Gya district. The number of pending cases is 152, with an estimated revenue of Rs. 73,009.

Patna Division.

Bhagalpur Division.

The net increase was Rs. 3,634, obtained principally from original settlements in the Bhagalpur district.

There has been no settlement work during the year. The Khurdhá settlement work was long ago practically finished; but a considerable amount of miscellaneous work has

Orissa Division.

delayed the submission of the completion report. The amount expended during the year of report was Rs. 21,875, and an application for an expenditure of Rs. 25,882 was made for the year 1886-87. The estimate has, however, only been sanctioned for so much as may be necessary as to enable Mr. Taylor to prepare his report. The other charges, which may be found to be actually necessary, have been transferred to the management grant. The whole of the pending work has been removed from Mr. Taylor's hands and transferred to those of the khas tehsildar and his establishment. Mr. Taylor has now devoted himself to the preparation of the settlement report.

Mr. Slack is the special settlement officer for the whole of this Division, but his work is much more largely concerned with

Chutná Nágpur Division.

estates under the Court of Wards than with Government estates. The settlement of the estates Khuruckdiha and Chai in the Hazaribagh district is still pending. A detailed investigation was made into the rates of rent and classification of the lands, and instructions have been given for a revised settlement in which the old rates as well as the old customs will be maintained. The assessment on new cultivation at old rates is expected to produce an increase of jumma amounting to 13 per cent.; but in all cases of apparent hardship a graduated scale will be adopted under the rules in force.

In Mámbhúm and Singbhúm there are no Government estates for settlement, and the only estate in Lohárdagá is Burkagurh, of which three villages under settlement are in a forward state.

Government Estates.

THE number of estates belonging to Government during 1885-86, managed directly and farmed, amounted to 2,950, and the number of private estates managed by Government was 209. The total demand from estates belonging to Government during the year 1885-86 was Rs. 31,93,925, out of which Rs. 21,02,332, or 65·82 per cent., were collected, against 67·91 per cent. collected in the previous year, and Rs. 1,32,208 were remitted, leaving an outstanding balance of Rs. 9,59,385. The percentage of the current collections on the current demand was 68·40, against 69·11 in 1884-85, and of arrear collections on the arrear demand 60·12, against 65·14 in 1884-85.

One thousand three hundred and fifteen estates, of which 209 belonged to private persons who had refused settlement, with an annual rental of Rs. 27,63,045, were managed direct at a cost of Rs. 1,96,803, or 7·1 per cent. on the demand, being the same as the percentage of the previous year. Including an arrear balance of Rs. 11,04,618, the total demand of the year was Rs. 38,67,663, out of which Rs. 26,78,174, or 69·2 per cent., were realised, the corresponding percentage of the previous year being 71·1. The percentage of collections on current demand was 96·9 against 97·1 in 1884-85.

The following statement shows the number of directly managed estates in each division, with their financial condition during the past year :—

DIVISION.			Number of estates.	Gross demand.	Current demand.	Collections.	Percentage on gross demand.	Percentage on current demand.	Percentage on current demand in 1884-85.	Cost of management.
				Rs.	Rs.	Rs.				Rs.
Bardwán	58	7,38,428	5,37,511	5,05,269	68·6	94·0	101·3	52,816
Presidency	185	2,67,995	1,97,118	1,69,717	63·2	86·0	98·0	10,940
Rājsháhí	120	5,33,561	4,20,609	4,33,486	81·2	103·0	87·4	25,782
Dacca	458	4,04,460	3,01,573	3,18,158	78·6	105·4	95·0	15,636
Chittagong	199	7,61,539	4,93,660	5,03,783	65·8	102·0	94·7	41,810
Patna	148	3,02,050	2,24,263	1,98,612	65·7	88·5	88·7	20,704
Bhagalpur	83	1,51,597	1,14,167	1,03,496	68·2	90·6	96·8	10,011
Orissa	31	6,16,713	3,90,803	3,62,516	58·7	92·7	111·4	14,441
Chutiá Nágpur	33	88,320	83,311	83,137	94·1	99·7	97·8	4,633
Total	1,315	38,67,663	27,63,045	26,78,174	69·2	96·9	97·1	1,96,803

The results of direct management during 1885-86 were not very successful by comparison with other years. But, nevertheless, the net income was larger than could have been obtained had the estates been farmed out. The allowance made to middlemen in such cases is 20 per cent. on the rental, while the most allowed for direct management, including improvements and contributions to roads and schools, is 10 per cent.; to this adding 3·1 per cent., the amount by which the collections of the year fell short of the current demand there would be an advantage of 6·9 per cent. in favour of the form of management adopted, even if the farmers paid in full, which they never do. They really pay, in proportion to the current demand, no better than the ryots when dealt with directly, and, from a financial point of view, the additional 10 per cent. allowed to them is a loss, against which the only set-off is the comparatively trifling interest on the outstanding balance, in so far as that exceeds the amount to which it would reach were the estates directly managed.

In the Bardwán Division the realisations amounted to 68·6 per cent. on the gross demand and 94·0 on the current demand, against 73·0 and 101·3 in the previous year. The falling off has been general. The khas mehals are mostly in the districts of Midnapur and Húglí. In Midnapur the percentage on the current demand has fallen off from 101·7 to 95·3, owing principally to indifferent results in the Majnamuta and Jalamuta estates, where Rs. 4,62,316 were collected, against Rs. 5,03,053 in the preceding year. The balances on these estates at the end of the year were Rs. 1,78,454 against Rs. 1,70,766. In the Presidency Division the collections on the gross demand fell from 76·9 per cent. in 1884-85 to 63·2 in the year of report, the decrease being in all the districts of the Division except Jessore. In the Rájsháhi Division the percentage of realisations on the gross demand rose from 74·4 in 1884-85 to 81·2, and the total collections also exceeded the current demand. Except in Dacca, the collections exceeded the current demand in all the districts of the Dacca Division, the highest being 115·3 in Maimansingh, and the lowest 103·9 in Bákarganj. In Dacca the percentage was 96. The collections in the Chittagong Division improved, especially in the Chittagong district, where the percentage of collections on the current demand rose from 93·4 in 1884-85 to 106·4. The collections in this district rose from Rs. 2,95,273 in 1883-84 to Rs. 3,33,027 in 1884-85 and to Rs. 3,83,467 in 1885-86. In the Patna Division the collections were 65·7 per cent. on the gross demand and 88·5 per cent. on the current demand, against 70·3 and 88·7 per cent. respectively in the preceding year. In Durbhunga short collections were due to litigation which is still pending in the High Court, and the rubbi crop failed in the Bhabuah sub-division of Sháhábád. The collections in the Bhagalpur Division fell off to 68·2 and 90·6 per cent. from 74·3 and 96·8 in the previous year. The decrease was most marked in Purneah, where collections were temporarily suspended on account of damage caused by the floods. The collections in the Orissa Division amounted to Rs. 3,62,516, or 92·7 per cent. on the current demand, against 111·4 in 1884-85 and 63·5 in 1883-84. Of the balance of Rs. 1,95,399 outstanding at the close of the year, Rs. 33,766 have since been realised. The collections in the Chutiá Nágpur Division were satisfactory.

The allotment made for the management and improvement of Government estates during the year was Rs. 2,10,454 for management proper and Rs. 65,000 for miscellaneous improvements, or in all Rs. 2,75,454. In addition to this amount, Rs. 27,000 were placed at the disposal of the Board of Revenue for reproductive works on Government estates under the supervision of the Public Works Department, and Rs. 30,000 were assigned to the Majnamuta and Jalamuta estates in Midnapur for the maintenance of khalls and gram-bharies.

The sum of Rs. 54,753 was spent during the year on the improvement of Government estates by the excavation of tanks, the sinking of wells, by drainage, irrigation, embankments, and similar works. In addition to this amount, Rs. 27,342 were spent from the funds of the Orphanganj market, in the 24-Pergunnahs, on reproductive improvements to that estate. The usual contribution of 2½ per cent. on the collections was made for the construction of roads and for education on Government estates. The Agricultural Department gave some impetus to the cultivation of new staples on Government estates. The estate of Pichasa, in the Patna district, was placed under the supervision of Mr. Allen, Assistant to the Director of the Agricultural Department, for making experiments, which were attended with success. In the Government estates of Sháhábád the experimental cultivation of wheat was tried on scientific principles under the supervision of the same officer, and the result was successful. Successful attempts were made by Mr. A. C. Sen, another officer of the Agricultural Department, to cultivate mattar, wheat, mussooree, and the potato in Bardwán. In some parts of the country the use of the Bihiyá sugar mills is increasing, and there is a hopeful tendency in some places to accept improved ploughs constructed on a cheap pattern. Four ploughs of an American pattern were sold to the ryots of the Pealapara Government estate in Bhagalpur, and were found to work well. Two Barákhhar ploughs supplied to the Sub-divisional Officer of Dinapore are said to have succeeded, but to have been declared by the cultivators to be suitable only for soft soil. Two bulls

Improvements on Government estates.

for breeding purposes have been purchased, and will be maintained on the Government estates at Buxar and Nasriganj, in the Sháhábád district.

The condition of the ryots on the Government estates in the Dacca, Presidency, Chittagong, Patna, and Chutiá Nágpur Divisions was generally good. In parts of Bardwán,

Condition of ryots. Bhagalpur, and Rájsháhí losses were sustained from inundation. In Orissa some distress was felt by ryots of the estates bordering on the Chilka Lake and its neighbourhood. A grant of Rs. 9,500 was made for their relief. The ryots of the Birso estate in Balasor suffered much damage from the cyclone of September 1885 and the sea-wave that followed it. Sanction was given to the remission of rent for the Amli year 1293 in the case of those ryots who lost their whole crop, and to the remission of three-fourths of the rent in the case of those ryots who saved only one-fourth of their crop.

Wards' Estates.

THERE were 97 wards' estates and 79 attached estates, or a total of 176 estates under Government management during the year 1885-86. In the preceding year the numbers were respectively 107 and 90. The annual rent demand was Rs. 93,42,744, and the collections amounted to Rs. 87,77,439, or 93·9 per cent. The remissions amounted to Rs. 3,84,000, and the balance outstanding increased from Rs. 75,78,418 to Rs. 77,82,737. The percentage of realisations to current demand was rather better than in either of the two preceding years. Collections were best in the Chittagong Division and lowest in the Orissa Division, the percentages being 100·1 and 78·3 respectively.

The total demand of rent due to superior landlords was Rs. 4,11,478, of which Rs. 2,67,970 were current and Rs. 1,43,508 arrear. The payments amounted to Rs. 2,86,424, and the balance, after deducting remissions, was Rs. 1,20,189, of which Rs. 75,119 represent current and Rs. 63,070 arrear balance. The balances are heaviest in the Patna, Presidency, and Bardwán Divisions.

The introduction of new forms of receipt under the Bengal Tenancy Act accounts for short collections on three estates—Srinagar, Sultangacha, and Lolit Mohan Rai; and there is reason to suppose that in two of these cases some of the ryots at least had just cause to dispute the validity of demands made against them. On Srinagar, though it has been found necessary to remit arrears amounting to the whole rental of several years, the balance still outstanding exceeds two years' income, and the Lieutenant-Governor, in investigating the state of the property while on tour in September last, came to the conclusion that a survey and record of rights was necessary in order to ascertain the rent-roll. In the case of the Sultangacha estate, the High Court disallowed rent improperly assessed on rent-free land by the late proprietor, who, with a rental of Rs. 1,26,926, left behind him an arrear demand of over four lakhs. Far from realising these enormous arrears, the Court of Wards has never been able to collect even the current demand. Where heavy unrealisable balances, and the result of particular suits, indicate that the ryots challenge with effect the validity of the rent-roll, the introduction of the new forms of receipt, in which the annual rent has to be specified, must bring disputes to an issue, with the ultimate effect of putting an end to a state of things which can be only regarded as intolerable. The Lolit Mohan Rai estate is small, and the friction on it is sufficiently accounted for by the fact that the manager and the greater part of the collecting staff were absent from it during most of this and the preceding year, conducting civil suits at Dacca.

The total cost of management during the year was Rs. 7,91,970, or 7·9 per cent. on the current rent and cess demand. If the charges for the construction and repairs of catchery buildings and for survey and settlement are excluded, the cost is reduced to 7·0 per cent. on the demand. This percentage is lower than that of previous year, but the reduction is entirely due to the low rate of charges in the Bardwán estate. The charges, as usual, were lowest in those Divisions in which the estates are largely let out in putni. Thus the charges of management of the Nashipur mal and debuttar estates are 2·1 and 2·2 per cent. respectively, of the Syudpur estate 1·6 per cent., and of the Bardwán Raj 2·5 per cent.

The following statement shows the expenditure during the year on schools, dispensaries, and works of improvement :—

DIVISIONS.				Subscriptions and donations to schools.	Subscriptions and donations to dispensaries.	Maintenance in efficient condition of estates, buildings and other immoveable property.	Improvement of land and property and benefit of ward.
1				2	3	4	5
				Rs.	Rs.	Rs.	Rs.
Bardwán	21,043	16,525	80,767	3,904
Presidency	7,193	2,816	16,592	6,493

Total for 1884-85				11,697	11,395	97,405	74,122
Total for 1883-84				39,989	19,445	90,431	1,20,193
Total for 1882-83				31,478	16,252	1,23,593	72,576

The extent to which surveys and records of rights have been carried out by special officers in recent years in Wards' estates is summarised as follows:—

"The survey and record of rents in the Chooramon estate in Dinagepur was commenced in November 1884 under the supervision of a Sub-Deputy Collector; the work is expected to be completed in three seasons; the area is 172,357 acres, and the sanctioned expenditure is Rs. 46,589, or 4 annas 4 pies an acre—a rate which thus far has not been exceeded. The survey of the Burdhankotee estate in Rungpur was completed in December 1885 under the supervision of a first grade canoongoe; the survey has cost 7 annas 8 pies per acre, but the settlement work is not yet finished. A Sub-Deputy Collector was employed upon the survey of the Sasseram endowment estate in Sháhábád. An area of 14,622 acres was measured, and the total cost of the survey and record of rights was Rs. 9,020, or 10 annas an acre. The survey of the Chutiá Nágpur estate in Lohárdagá was completed in 1884-85 by Mr. Smart, a pensioned officer of the Professional Survey Department. The surveyed area amounts to 675,660 acres, and the estimated cost for both survey and settlement is Rs. 1,72,066, or a fraction over 4 annas per acre; but as the settlement is still unfinished, it is uncertain whether this estimate will be exceeded. The survey of the Dhanwar estate in Hazáribágh was made by a professional party under Major Sandeman at a cost of Rs. 41,000, or 6 annas an acre. The settlements of the Chutiá Nágpur and Dhanwar estates, and the surveys and settlements of other estates in the Chutiá Nágpur Division, are now under the charge of Mr F. A. Slack. Seven of the estates under the Court of Wards, and seven estates which are managed under the Encumbered Estates Act of 1876, have been selected for the operations which are now in progress."

No new surveys on a large scale were undertaken during the year, pending the settlement of the provisions of the Bengal Tenancy Act. The expediency of now commencing such surveys on the Srinagar, Narhan, Tikari, Cossimbazar and other estates has been under discussion since the close of the year.

Considerable distress was occasioned in several portions of the country by the severe inundation which took place in September 1885. It is true that ultimately the soil is fertilised by the deposit of river silt which the water brings with it; but temporarily, while the inundation lasts, the sufferings of the people are necessarily great. In the Kanika estate in Orissa a cyclone, accompanied by a storm-wave, occurred on the 22nd of September. Out of 290 villages in the south of this estate, 11 were completely swept away, and 108

Condition of the tenantry on Wards' estates.

were partially destroyed. Three-fourths of the population of these villages are said to have perished. The precise loss of life has not been ascertained, but it probably exceeded 5,000 persons. Rents were remitted and relief was liberally granted; but the effects of this terrible calamity will be felt for many years to come. The condition of other districts in the province, which did not suffer from special causes, was generally prosperous.

Since the abandonment of the Wards' Institute in Calcutta, the education of minor proprietors has been carried out either in their homes by private tuition, or at the Government schools and colleges at the head-quarters of districts. In nearly all cases the reports of progress are favourable. The prominent exception to these good reports is noticeable in the case of three wards in the Orissa Division, whose backwardness and indolence in the prosecution of their studies require the consideration of the local authorities.

The principal estate under management during the year was that of the Bardwán Raj with a current demand of Rs. 45,72,602, and liability on account of revenue, &c., of Rs. 34,89,170. The collections amounted to 98 per cent. of the current demand.

Two important matters in connection with this property were under discussion during the year, and are still unsettled—the adoption of an heir by the widow proprietor, and the settlement of disputes as to landed property with the dowager Maharani.

III.—PROTECTION.

Course of Legislation.

DURING the year 1885-86 seven Bills occupied the attention of the Council of the Lieutenant-Governor of Bengal. Of these seven Bills, four were passed by the Council, of which two received the assent of the Governor-General,—Act I (B.C.) of 1886, an Act to further amend the Village Chowkidari Act, 1870; and Act II (B.C.) of 1886, an Act to amend Act II (B.C.) of 1866 and the Calcutta Police Act, 1866.

This Act received the assent of the Governor-General on the 24th May 1886.

Act I (B.C.) of 1886—an Act to further amend the Village Chowkidari Act, 1870.

The object of the Act is to introduce a better system of appointing punchayats, and securing the more certain and punctual payment of chowkidars. The Act provides for the selection of punchayats by a magisterial officer on the spot, and fixes three years as the term for which the appointment shall be held. In order to secure the more certain and punctual payment of the chowkidars, it is provided that the punchayats shall pay in their collections to the Magistrate. In case the punchayats find themselves unable to realise the chowkidari assessment, power is given them to appoint a tehsildar, whose salary will be collected from the defaulting villagers.

This Act received the assent of the Governor-General on the 28th May 1886.

Act II (B.C.) of 1886—an Act to amend Act II (B.C.) of 1866 and the Calcutta Police Act, 1866.

The object of the Act is to enable the Calcutta and Suburban police to arrest without a warrant drunken persons guilty of riotous or indecent behaviour in the public streets, and persons committing offences against public decency.

This Bill was introduced on the 30th January 1886, and referred to a Select Committee. The report of the Select Committee

A Bill to amend the Bengal Vaccination Act, 1880.

was presented and the clauses of the Bill settled without amendment on the 27th March 1886, and the Bill was passed on the 10th April 1886. The object of the Bill is to extend the benefits of the Bengal Vaccination Act, 1880, to immigrants and temporary sojourners, by permitting notices to be served on parents, requiring them to have children vaccinated within 15 days from the date of service, by authorising the Health Officer to require any unprotected person on any vessel arriving in the port of Calcutta with small-pox on board to be vaccinated, and by affording the Health Officer greater facilities for ascertaining whether persons are protected or not.

This Bill was passed on the 10th April 1886. It was entirely recast by the

A Bill to amend Act III (B.C.) of 1879 (an Act to provide for the periodical inspection of steam-boilers and prime-movers attached thereto in the town and suburbs of Calcutta, and in Howrah).

Select Committee, which restored it to the form in which the members of the Boiler Commission had originally suggested that the Act should be amended, by striking out all words which referred to the inspection of prime-movers.

A Bill to consolidate and amend the law relating to Canooongoes and Patwaris.

This Bill was introduced on the 14th February 1885, and referred to a Select Committee. The report of the Select Committee was not presented

during the session.

This Bill was introduced on the 20th December 1884, and referred to a Select Committee. On the 10th April 1886, the preliminary report of the Select Committee was presented and ordered to be published in the *Calcutta Gazette*, together with the Bill as preliminarily amended.

A Bill to provide for the registration of permanent tenures.

This Bill was introduced and read in Council on the 10th April 1886. The primary object of the Bill is to introduce such modifications into the existing law for Calcutta as are necessary to adapt it to the enlarged area in which it will be in force, "Calcutta" in the Bill including a large portion of the suburbs of the town as at present constituted. The opportunity is, however, taken to remedy the defects which experience has shown to exist in the details of the existing Municipal Act.

A Bill to consolidate and amend the law relating to the municipal affairs of the town and suburbs of Calcutta.

Police.

EXCLUDING the Chittagong Hill Tracts, the police budget grant for the Lower Provinces was Rs. 43,81,553. The actual expenditure for the financial year 1885-86 was Rs. 41,95,793. There was a saving, amounting to Rs. 1,82,299, under the head of Pay of Executive Police. The total sanctioned force consisted of 72 superior officers, 160 Inspectors, 899 Sub-Inspectors, 2,369 Head-constables, and 19,594 Constables. The cost of the force employed on purely police work is approximately estimated at Rs. 26,22,486, or 7·6 pies per head of the population.

The proportion of police to area and population is shown in the following table :—

PROVINCES.	Number of police.	Area in square miles.	Population.	Proportion of police to square mile.	Proportion of police to population.
Bengal	12,122	70,956	31,821,373	1 to 5·8	1 to 2,872
Behar	6,121	44,139	23,127,104	1 to 7·2	1 to 3,778
Orissa	1,418	9,762	3,789,694	1 to 6·8	1 to 2,672
Chutiá Nágpur	1,456	26,966	4,225,989	1 to 18·5	1 to 2,902
Total	21,117	151,823	65,964,160	1 to 7·1	1 to 3,123

The number of town and village police, not subject to the rules of the regular police, was 170,097. The average annual emoluments of each man was Rs. 31·8, against Rs. 30·5 in the preceding year, and the total annual cost Rs. 54,15,940·7·7, against Rs. 52,22,339. In the chapter on Police published in the General Annual Administration Report for 1884-85, it was stated that the reports on the working of the Chaukidári Act were not generally favourable. The complaints referred principally to the irregular manner in which the chaukidárs were paid. During the year a draft Bill was under the consideration of the Lieutenant-Governor, which it was hoped would reform the defects of the present Act, without abrogating its principle. The Legislative Council ultimately came to the conclusion that the existing system should have a further trial, and accordingly, since the conclusion of the calendar year 1885, Act I (B.C.) of 1886, to amend the Village Chaukidári Act, 1870, was passed. The amending sections provide for a better system for the appointment of pancháyats, and for the more punctual payment of the salaries of the chaukidárs.

The East Indian Railway Police now consists of 253 officers and men. The force on the Tirhút State Railway numbers 35, and that for the Eastern Bengal Railway system 225. The new scheme for the railways in Eastern and Northern Bengal was introduced in the middle of August 1885, and after a year's experience its working has been favourably reported on.

There were no punitive police in any district except Bákarganj, where a third party had to be quartered during the year at Katadia.

The police maintained order at 172 fairs attended by about four and three quarter millions of people. Only 140 cases—none of them of a serious nature—were reported, and convictions were obtained in 106 of these cases. These figures are a striking indication of the peaceable and law-abiding character of the people.

The percentage of educated Inspectors was 99·4. Among Sub-Inspectors the percentage increased from 98 to 98·4, among Head-constables from 78·6 to 79·1, and among Constables there was a decrease from 27·5 to 26·3. It is said that the drill of the force has not improved, if it has not fallen off. The special reserves are said

to be good schools for drill, and an attempt is being now made to utilise them as much as possible.

Armament.

difference in the shooting.

The new carbines have been issued, but the Inspector-General states that there was little

Casualties.

The total casualties in the police increased from 2,971, or 12·5 per cent in 1884, to 3,224, or 13·5. There were more retirements, resignations, and discharges, but fewer dismissals. The police service is said not to be so popular as it used to be when the work was lighter, and many men now resign after a short trial. Indeed, it is said that in some of the eastern districts it is practically impossible to keep the force up to its full strength.

Offences committed by police.

There were four well-established cases of torture against the Police, three charges having been found to be false. A very gross case occurred in Bākarganj. A sub-inspector, three constables, and two chaukidárs were charged with torturing an accused person to death, after which the body was suspended from a mango-tree to make it appear that suicide had been committed. The Judge acquitted the accused, as the principal evidence was that of an approver; but the officers implicated were dismissed. In another case, which occurred in Farídpur, the principal accused was the village pancháyat. In three of the proved cases, adequate punishments were inflicted. There were only six petty cases of extortion by the Police. The number of judicial punishments under the Penal Code decreased from 385 to 323; those under the Police Act from 243 to 241; and departmental punishments (including dismissals) from 5,815 to 5,482. Judged by figures, the conduct of the police thus appears to be improving.

Discipline and inspection of police.

The number of men wearing good-conduct stripes was 10,570, an increase of 1,651 on the previous year. The possession of three stripes entitles the wearer to a good-conduct allowance of one rupee per month. Money rewards were received by 1,657 officers and men, against 2,049 in the previous year. As regards inspections by District Superintendents, orders have recently been issued which will somewhat reduce the amount of inspection to be performed by them, and will give them more time to attend to important work at head-quarters.

Escapes.

Escorts.

There were 219 escapes, against 216 in 1884. Of these, as many as 83 were effected during transit. One hundred and two persons, or 46 per cent., were recaptured.

The number of prisoners escorted during the year was 15,273, and the total amount of treasure

Rs. 10,56,01,131-3-2.

Deaths by suicide increased from 2,531 to 2,712. It is noteworthy that in Tipperah nine children committed suicide.

Violent deaths.

Cases of accidental death increased largely from 26,903 to 31,347. Of these, as many as 13,622 were caused by drowning and 9,932 by snake-bite.

The percentages prescribed as tests of police work relate to cases, persons, or property. The proportion of cognizable crime to population and police is compared with that of

other Provinces in the following table:—

PROVINCE.	Police.	Population.	Crime (cognizable).	Proportion of police to population.		Proportion of police to crime (cognizable).		Proportion of crime (cognizable) to population.	
				Police-man.	Persons	Police-man.	Cases.	Case.	Persons.
North-Western Provinces ...	32,982	43,268,599	152,786	1 to	1,311	1 to	4·6	1 to	283
Punjab ...	20,599	18,812,264	62,510	1 "	91·4	1 "	3·0	1 "	301
Central Provinces ...	8,658	9,838,791	20,487	1 "	1,136	1 "	2·3	1 "	480
Bombay, including Sind ...	18,381	15,689,590	41,642	1 "	853	1 "	2·2	1 "	376
Madras ...	22,146	30,868,504	91,806	1 "	1,393	1 "	4·2	1 "	325
Assam ...	2,004	4,663,065	10,585	1 "	2,321	1 "	5·2	1 "	439
Bengal ...	23,930	65,964,160	112,365	1 "	2,756	1 "	4·6	1 "	587

The Presidency is apparently the most criminal division, with one cognizable case to 472 of the population; and Dacca the least so, with one to 824. Of districts, Dárjiling stands first with one to 81, and Noakhally last with one to 1,022.

The following figures show the decrease in cognizable and non-cognizable crime as compared with the previous year:—

			1884.	1885.
Cognizable	112,365	107,410
Non-cognizable	107,368	105,996
	Total	...	219,733	213,406
Decrease in cognizable cases	4,955
Ditto in non-cognizable cases	1,372
	Total decrease	6,327

In the Dacca Division alone there was a decrease of 2,738. Only two divisions (Chittagong and Orissa) showed an increase, mainly in non-cognizable crime. In Behar the percentage of non-cognizable crime was only 41·4, while in Bengal it is 54·9. In the Dacca Division it is 59·2, in the Patna Division only 38·8. The Inspector-General states that among the well-to-do residents of Eastern Bengal, the percentage in Noakhally is as high as 83·4; in Gya it falls as low as 26·6; and in Chutiá Nágpur, where litigation, for its own sake, is even less practised, to 22·1 in Lohárdagá. With reference to the decrease in the number of cognizable cases, considerably more than one-half is accounted for by a decrease of 2,700 in nuisances, of 400 in salt prosecutions, and of 200 in excise prosecutions.

The percentage of cases declared false decreased from 6·3 to 4·0; but there can be no doubt that the actual percentage is very much higher. The number of cases excluded from the returns as false through mistake of law or fact was no less than 9,183, and different divisions show great variations in this respect.

Out of a total of 6,462 cases declared false, prosecutions were instituted in only 1,404 cases and convictions obtained in only 353. The subject of prosecutions for false charges is one on which there is much difference of opinion, and there is still considerable diversity of practice as regards the institution of such prosecutions. In the district of Nadiyá the percentage of prosecutions was 46·0 and of convictions 40·4; while in the adjoining district of Jessor only one conviction was obtained in 35 cases. And even in the same district there is extreme divergence of procedure, as in two sub-divisions of the 24-Pergunnahs prosecutions were instituted in every instance, whereas in a third there were only 7 prosecutions to 69 false cases. In Chittagong only two prosecutions were instituted, though a hundred cases were declared false, and the Commissioner explains that this disregard of orders was due to the weakness of the staff. In this, as in some other districts, there appears to have been too great a tendency to note on C. false forms that there is not sufficient evidence for a prosecution. In Monghyr the results were extremely bad, there having been 246 false cases, 36 prosecutions, and only 4 convictions. As the Inspector-General remarks, figures such as these mean delay in instituting a prosecution, and dilatory procedure after institution, until the cases become thoroughly stale.

Out of a grand total of 107,410 cases reported, only 792, or ·7 per cent., were not enquired into under the provisions to section 157 of the Criminal Procedure Code, against 3·6 in 1882.

The percentage of convictions in cases enquired into by the police was 38·3, against 39·8 in 1884 and 41·9 in 1883.

The number of persons arrested by the police was 76,831, of whom 52,919 were convicted, the percentage being 68·8, against 67·7 in the previous year. The highest percentage is shown by Dárjiling, Howrah, and Patna, and the lowest by Pabná, Khulna, and Bákarganj. The results in Pabná were extremely bad, and though various causes are assigned, the Magistrate cannot be altogether absolved from responsibility. The criminal

work in this district is heavy, and the normal number of officers will probably have to be increased by one.

The percentage of convictions to arrests, of convictions to persons brought to trial, and of convictions to persons actually tried, show an increase on the previous year under all classes of crime. The percentage of convictions in offences against the person continued to be low. The percentage of convictions to the number of persons tried at Sessions trials was only 56·3, a lower average than any during the last five years. In three of the jury districts (Patna, Dacca, and Húgli) there were more acquittals than convictions. In Bardwán (also a jury district) results were better, the percentage of acquittals being 39·1; but in the adjoining district of Midnapur, where trials are held with the aid of assessors, the percentage of acquittals was only 17·7. In the Dacca Division the percentage of acquittals fell from 60·0 to 31·1, but no reason is assigned for this marked improvement. In Behar (excluding Patna, the only jury district) the results of Sessions trials were satisfactory, the acquittals varying from 14·2 per cent. in Champáran to 24·3 in Sháhábád. In Dacca five and in Bardwán two verdicts of juries were referred and set aside under section 307 of the Code of Criminal Procedure. In two cases out of three referred in Húgli, unanimous verdicts of not guilty were set aside, and in a fourth case the Judge accepted a verdict with which he disagreed.

The number of cases in which property was stolen increased from 40,683 to 41,117, while property was recovered in 18,075 cases, against 18,582 in 1884. The amount stolen increased from Rs. 9,92,560 to Rs. 10,30,005, and the amount recovered from Rs. 2,67,092 to Rs. 3,00,158. The percentage of cases in which property was recovered to those in which property was lost declined from 45·6 to 43·7, whilst the percentage of property recovered to property lost increased from 26·9 to 29·1. The latter percentage was as high as 56·1 in Palamow and Noakhally, whilst in Maimansingh and Rungpur, where the police are said to be over-worked, it was as low as 11·8 and 14·9 respectively. In Gya, too, the results were very bad, the Magistrate alleging as the reason the large number of professional receivers of stolen property, many of whom are persons of outward respectability and of some influence, against whom evidence can very seldom be obtained.

Classification of true cases of cognizable crime.

The annexed statement shows the number of true cognizable cases in 1878 and during the past five years:—

		1884.					
CLASS I.—Offences against the State and public tranquillity.	2,785	2,127	2,508	2,639	2,769	2,802	
„ II.—Serious offences against the person.	4,267	4,301	4,267	4,684	4,618	4,184	
„ III.—Serious offences against the person and property or against property only.	23,887	19,051	18,520	19,609	21,221	21,103	
„ IV.—Minor offences against the person.	9,531	11,096	12,450	2,813	2,580	2,533	
„ V.—Minor offences against property.	45,819	35,673	36,301	37,690	42,630	42,206	
„ VI.—Other offences not specified above.	11,996	21,056	27,181	29,554	28,477	24,819	

The figures for 1885 are very much the same as those for 1884, except that there was a considerable decrease under class VI.

Under class I there was a small increase of 33, due solely to an increase of 103 under rioting, as all the other heads exhibit a decrease. The percentage of convictions in rioting cases was only 43·7, against 41·1 in 1884. The Bardwán Division shows an increase of 60 cases, of which there was an increase of 26 in Midnapur. There was a serious case in the Midnapur district, in which some four or five hundred people, said to have been headed by one of the Moyna zemindars, forcibly cut the Government embankment

near Ghanpur, thereby flooding a large tract of country and destroying the crops. The most serious feature connected with the rioting in the Presidency Division was the fact that as many as 13 were attended with loss of life. The Cuttack district shows 45 rioting cases, against 18 in 1884—a rise of exactly 60 per cent., due to the disputes in connection with killa Koojung, the property of the Bardwán Raj. Out of 70 cases in the Chutiá Nágpur Division, 32 occurred in Manbhúm, in a portion of which (pergunnah Burrabhum) there are disputes relating to the cultivation of indigo, and the relations between Messrs. Watson and Company's Manager and the ryots are in consequence very strained. The Dacca Division shows 413 rioting cases, against 438 in 1884. A decrease in Champáran is attributed to the people being more than ordinarily comfortable; but, as has been pointed out by the Inspector-General, it is in Eastern Bengal, where the ryots are well off and the pressure of poverty is least felt, that the offence of rioting is most ingrained and prevalent. In the Santál Pergunnahs occurred the so-called "gola-kata" case, an occurrence on the Ganges near Rajmehal, in which the Sub-divisional Officer of Rajmehal and some other Europeans in a boat were attacked by the boatmen of some other boats, who were under the impression that the *sahibs* were, at the instance of Government, in search of human heads to be thrown into the river at the site of some bridge about to be constructed. The offences relating to coin do not call for any particular remark. There were 119 cases, against 101 in 1884. Seventy-one persons were convicted and 44 discharged or acquitted.

Serious offences against the person. The following statement shows the number of reported cases and the number of persons convicted in the different divisions of the province during the past two years:—

DIVISION.					Cases reported.		Persons convicted.	
					1884.	1885.	1884.	1885.
Bardwán	644	635	314	322
Presidency	879	823	456	481
Rájsháhí	671	607	303	297
Dacca	914	926	467	506
Chittagong	308	323	209	191
Patna	888	846	487	519
Bhagalpur	360	354	203	208
Orissa	228	196	96	80
Chutiá Nágpur	248	234	144	138
Total					5,140	4,944	2,709	2,745

There were 288 murders, against 266 in 1884. Of these, 5 were by dacoits, 10 by robbers, 16 by poison, and 257 were murders of other kinds. It is noticeable that the number of murders by poison has exactly doubled, whilst the number of drugging cases has increased from 8 to 19.

The annexed statement shows the number of cases under the principal heads of class II during the past two years:—

DESCRIPTION OF CRIME.				1884.	1885.
Attempts at murder	49	55
Culpable homicide	191	203
Rape	145	133
Unnatural offences	63	42
Exposure of infants or concealment of birth	116	109
Attempt at or abetment of suicide	376	370
Grievous hurt	791	775
Hurt by dangerous weapon	1,064	1,075
Kidnapping or abduction	198	246
Criminal force to public servant or woman, or in attempt to commit theft or wrongfully confine	1,106	941

In 1884 abduction showed 66 cases fewer than in 1883, while it now has an increase of 48. The variations under the other heads do not call for any notice. The exposure of infants continued to be unusually prevalent in the Patna Division, which shows 61 cases to the provincial total of 109. The Inspector-General thinks that the explanation may be looked for in the general poverty of the population. The density of population to the square mile is greater

than that of any other division except the Presidency, while the population is almost one-fourth of the total population of the province.

Results before the Court of Sessions, though still far from good, were better than in any previous year since 1881, and the convictions exceeded the acquittals for the first time since that year—

		Acquitted by Sessions.	Convicted by Sessions.	Percentage of convictions to total tried.
1881	...	564	616	52·2
1882	...	634	524	45·2
1883	...	619	473	43·3
1884	...	576	481	45·5
1885	...	491	524	51·6

The results in jury districts continued to be very bad. In Bardwán, out of 19 persons committed for murder, only 1 was convicted and 16 acquitted. In Dacca out of 298 persons tried, only 94 were convicted, and in Patna only 59 out of 179. On the whole, excluding jury districts, where commitments are carefully made, acquittals are the exception rather than the rule.

Serious offences against person and property, or against property only.

There were 24,103 true cases, against 24,221 in 1881. The annexed statement shows the number of cases under the principal heads of this class during

the past two years:—

Description of crime.	1881.	1885.
Dacoity	165	164
Robbery with hurt	13	26
" in dwelling-house...	18	19
" on highway between sunset and sunrise	22	20
Other robberies	114	111
Serious mischief and cognate offences	639	703
Mischief by killing, &c., any animal	815	794
Lurking house-trespass or house-breaking with intent to commit an offence or having made preparation for hurt	22,173	22,023
House-trespass ditto	218	235

The variations hardly call for any notice. The Inspector-General thinks that, but for a certain amount of agricultural distress in the spring, there would have been a return to the lower figures of the three previous years. An increase of 11 per cent. in the percentage of cases ending in conviction to cases decided is a satisfactory feature. The bulk of the cases of mischief to animals is made up of cases of poisoning cattle for the sake of their hides. This crime is exceedingly difficult of detection; a few pea-leaves covered with arsenic are thrown on the ground in front of a grazing animal, and the deed is complete. The commission of this offence is further facilitated by the absence of any restriction on the sale or possession of poisons outside municipalities. The difficulty of detection renders it all the more necessary to pass adequate sentences when any case is proved. In paragraph 32 of the resolution on the report for 1884, the Inspector-General was asked to notice separately cases of mischief by fire. This has been done, and the judicial results are extremely bad, only 8 persons having been convicted, against 156 persons acquitted. Firing of houses is a common method of revenge in this country, and the nature of the houses renders the offence exceedingly easy of commission. At the same time, as the Inspector-General remarks, false charges of arson appear to possess a peculiar attraction as a means of inflicting injury on an enemy, no fewer than 117 cases (out of 384 cases reported) having been declared false. The districts of Nadiyá and the 24-Pergunnahs had 18 true cases each and not a single conviction.

As regards dacoity, the Rájsháhí, Bardwán, and Chutiá Nagpur Divisions are the worst in the order named, Rájsháhí having held the first position since 1880. One division, Chittagong, was entirely free from this crime: indeed, during the last six years there have been only eight cases in it. Ten districts exhibit a clean sheet, nine more have only one case each, and twelve have less than five. The seven worst districts are Bánkura with 13 cases, Bírghúm with 10, Dinagepur and Dárljiling with 11 each, and Murshedábád, Mánbhúm, and Pabná with 9 each. The Inspector-General remarks that it is only in the Rájsháhí, Midnapur, and Gya circles that organised dacoity has been found to

exist. Of the 164 dacoities of the year, 85 are returned as "professional," as opposed to "local" or "technical;" but the Inspector-General doubts if the classification has been properly understood and applied, and thinks that, until any particular gang is detected, local officers would return its work as technical. The results of trials for dacoity were, as usual, unsatisfactory. In Báukúra they were extremely bad, as only one man was convicted out of 34 sent up. The Inspector-General remarks that the Bírghúm cases were undoubtedly the work of men driven to crime by distress, and occurred only in those parts of the district in which charitable relief and relief works were not in operation. Out of 10 cases decided, 6 ended in conviction, but the number of persons convicted (14) was small considering that 61 were sent up. The Murshedábád Police sent up 74 men, of whom 28 were convicted in 11 cases. One case, in which the women of the house were stripped and burnt with torches, was extremely peculiar, as the dacoits were a mixed gang of Brahmans and Muhomedans. One of the Pabná cases, in which no property was taken, is believed to have been the work of an unsuccessful decree-holder to frighten his debtor into showing where his money was hidden. Two mail-robberies, which occurred near Serajganj, appear to have been technical dacoities, the object of the offenders being to procure the dismissal of the runners or of the overseer in charge of the line. In the Bhagalpur Division there were 16 cases of dacoity, against nine in 1884, and of these six occurred in Purneah and three in Maldah. Detection and results were alike very bad, as but five cases were brought to trial, and of these only one ended in a conviction. Results were equally bad in the Chutiá Nágpur Division, where dacoity cases exhibited a further rise from 17 to 20, while only two cases ended in conviction. There were 11 cases in Hazáribágh, of which the police succeeded in working out only one. Eight persons were convicted at the Sessions, but six of them were afterwards released by the High Court.

This class shows an unimportant decrease of 47 cases, 2,533 against 2,580 in 1884. The percentage of persons convicted to persons tried was 32·4, the low percentage being partly due to the fact that some offences under this

Minor offences against the person.

class are compoundable under section 345 of the Criminal Procedure Code, and that compositions are reckoned as acquittals. There were 2,497 cases of wrongful restraint and confinement, against 2,539 in 1884. The Dacca Division shows almost twice as many cases (648) as any other division, Bardwán coming next with 377. There can be no doubt that the large number of cases in the Dacca Division has some connection with the greater prevalence of unsatisfactory relations between landlords and tenants, attempts to enhance rent, combinations to resist enhancement or to withhold even just dues, and generally with agrarian disputes of various sorts. The proportion of false cases to cases reported in the Dacca Division is shown as nearly 8 per cent., but this figure probably falls short of the actual percentage. Cases of wrongful confinement or restraint of ryots by zemindars, to compel payment of rent, or as a punishment for opposition, are believed to be gradually disappearing, the few true cases that occur being generally so overlaid with exaggeration as to render conviction a difficult matter, only 33 per cent. of the cases decided having ended in conviction.

There were 42,206 offences under class V, against 42,630 in 1884. The following table shows the increase or decrease under the principal heads:—

Description of offence.	1884.	1885.
Lurking house-trespass or house-breaking	855	692
Theft of cattle	2,129	2,055
Ordinary theft	27,625	27,376
Criminal breach of trust	1,587	1,614
Receiving stolen property	2,074	1,874
Criminal or house trespass	8,336	8,562

The percentage of persons convicted in police cases to persons sent up for trial was 61·8 to 60·2 in 1884. The district of Murshedábád shows a large increase of 538 cases, which is attributed to the scarcity prevailing in the western portion of the district, and to the employment of the police in relief measures, more particularly after the bursting of the Laltakuri bund, which gave bad characters greater freedom of movement. The Rájsháhí Division shows a net decrease of 532 cases, Rungpur having 322 fewer, and Bogra 468 fewer. The

decrease in Rungpur is attributed to general prosperity, while the Inspector-General thinks that ill-judged action on the part of the assistant in charge led to the concealment of crime in Bogra. Maimansingh, which showed 424 fewer cases in 1884, now shows an increase of 532—a result which the Inspector-General considers to be due to a more honest system of keeping the returns. Taking together all sorts of house-breaking (serial Nos. 36, 37, and 43 of Statement A, part I), Sarun shows a decrease of 161, and Champáran of 125 cases. Muzafferpur and Sarun have now shown fewer cases for four years running, and the latter district had only 346 cases in 1885, against 1,219 in 1880. Gya, on the other hand, has nearly 1,200 more than any other district, and continues to show by far the worst judicial results. The District Superintendents of Patna and Sháhábád complain that their districts being easily accessible are considered a good field of operation by criminals from elsewhere, and that the natural difficulty of detecting these cases is increased by the social status of the receivers. The decrease in Sarun and Champáran was no doubt partly due to the success of measures taken to settle the Mughya Domes. There was a large decrease of 297 cases in Purneah, and a still larger increase of 405 in Monghyr, which was probably due to better reporting by the chaukídars.

There were 24,819 cases under class VI, against 28,477 in 1884, more than two-thirds of the decrease being accounted for by the falling off in prosecutions for public and local nuisances. The following table shows the figures for the last two years under the principal heads of this class:—

Description of offence.				1884.	1885.
Vagrancy and bad character	1,122	1,117
Offences against excise laws	2,606	2,404
Ditto	Opium Act	537	571
Ditto	railway laws	346	348
Ditto	salt and custom laws	766	353
Ditto	Arms Act	1,204	938
Public and local nuisances	20,709	18,053
Other special and local laws cognizable by police				1,045	905

The percentage of persons convicted in police cases to persons sent up for trial was 89·6, against 88·6 in 1884.

Out of 1,210 persons called upon to show cause, 750 were required to find security, and 410 were discharged. Proceedings were thus instituted against only one person in every 54,515 of the population—figures which demonstrate the leniency and even sparingness with which the sections of the Criminal Procedure Code relating to this subject have been resorted to. In Bengal 1,078 cases were instituted on the report of the police, and 77 by petition before the Magistrate; of these, 695 of the former and 34 of the latter ended in conviction. Some of the cases were delayed for long periods—a fact which was possibly due to the orders that the inquiry should ordinarily be held on the spot. A case in Nadiyá occupied more than a year, one in the 24-Pergunnahs 330 days, one in Tipperah 326, one in Bákarganj 295, one in Jalpáigurí 233, while ten other cases occupied more than 100 days each. The average duration in Tipperah was 167, in Maldah 112, and in the 24-Pergunnahs 90 days.

The variations under these heads are shown in the table in the paragraph headed “Other offences not specified above.” It is said that the very large decrease of 402 cases (105 against 507) in the districts of Khulna and the 24-Pergunnahs is due to salt being cheaper, and that it will continue unless sudden raids are made in the Sunderbunds. The Commissioner, however, dissents from this view and considers that there has been an abatement of police vigilance. The increase in Chittagong from 28 to 45 cases is explained by prosecutions against persons taking brine from a spring in the Seetakoond hills, and by smuggling across the Naf at a time during the rains when salt was selling at 8 annas a seer on this side and at only two pice in Arracan. Excise cases show a decrease of 202, for which ganja and fermented tari cases are chiefly responsible. Patna, Gya, and Hazáribágh make up between them 211 of the opium cases, and Purí has 53 of the 307 ganja cases. The number of vendors punished has fallen from 553 to 368. Chittagong returns 22 opium cases, some of which are said to have been of great importance, and to have

decidedly affected the illicit trade with Burmah. There is a large decrease of 2,656 cases under the head of public and local nuisances. It is possible that the municipal bodies are more lenient or less keen on sanitation than heretofore. Perhaps they feel less sure of their footing owing to their not knowing the law so well as official Chairmen, Joint-Magistrates, and Vice-Chairmen. The Commissioner of Bardwān thinks that the decrease is largely due to diminished activity on the part of the police. That suburban districts like Howrah and Húgli should show such large decreases as 444 and 878 is certainly a noticeable feature; but it is as yet too early to pronounce an opinion as to whether this is in any way due to the new municipal *régime*. But no change of policy can be accepted as an excuse for an abatement of police vigilance *quoad* those offences which are cognizable by them, such as those under section 34 of Act V of 1861, and sections 269, 270, 277, 279, 283, 285, 286, 289, 291, 294 of the Penal Code.

The jurisdiction of this branch of the force was considerably increased during the year by the organisation of police on the Eastern Railway districts under a separate Assistant Inspector-General, and on the Tírhút and Bengal and North-Western lines under the Assistant Inspector-General, East Indian Railway. There were 1,517 cognizable and non-cognizable cases, and 1,121 persons were convicted out of 1,535 brought to trial. Including 23 cases of suicide, there were 214 accidents, and 118 persons were killed, of whom 23 were Railway servants. twenty-six cases of opium smuggling were detected, and Rs. 2,352-15 paid away in rewards. During the year the system, initiated in the previous year on the Eastern Bengal and Northern Bengal systems, of restricting the police to the duties of detecting and preventing crime and keeping order, watch and ward being provided for by the railway authorities as on the East Indian Railway, was finally sanctioned.

Non-cognizable crime.

Non-cognizable offences have decreased by 1,372 as will be seen from the following table:—

			1884.	1885.
Abetment	2
Class I	8,288	7,587
„ II	63	60
„ III	1,148	1,126
„ IV	54,867	54,731
„ V	9,629	10,629
„ VI	10,135	10,017
Special laws	23,238	21,844
			<hr/> 107,368	<hr/> 105,996

Class I shows a decrease of 701 cases, chiefly made up by offences against public justice (463), false evidence (111), and offences by public servants (101). Mischief shows a large increase of 1,086 cases, and cheating a decrease of 173. Under “Special laws” there are 1,394 fewer cases, municipal cases having fallen off by 1,003, salt cases by 535, pound cases by 462, excise cases by 118, and breach of contract cases by 107. Railway cases show an increase of 297, stamp cases of 146, vaccination cases of 106, and miscellaneous of 374. The police were employed in 4,814 cases, the percentage being 4.5, against 4.6 in 1884. This percentage is not at all too high, and, generally speaking, District Magistrates appear to keep a sufficient check on undue references to the police. 3,971 cases were transferred from the head of cognizable to non-cognizable crime. In the Dacca Division there was a large decrease of 2,198 cases, appearing in every district and in every class except class V. The Commissioner considers the low percentage of cases declared false to be very satisfactory; but, as pointed out by the Inspector-General, the figures are quite worthless, the low percentage being due to the fact that a case not declared to be false must be shown to be true, and that in most instances, where a Magistrate dismisses, he does so without expressing any definite opinion one way or the other. Cuttack shows an increase of 565 cases, mostly under classes V and VI. It is suggested that the cyclone was responsible for disputes about land and fallen trees, which eventually terminated in cases of mischief. The Inspector-General thinks that the connection is not very evident. But it is seldom that zemindars and ryots are agreed as to their

respective rights to trees ; moreover, trees along boundaries being blown down would bring conflicting claims to a head. Similarly, there might naturally have been disputes with regard to the cultivation of land the owners of which had been killed in the cyclone. It is doubtful whether the decrease under the head of offences against public justice and false evidence denotes any real decrease, some small districts having more cases than larger districts. Moreover, the number of cases would largely increase if Civil Courts were to take action under section 476 of the Code of Criminal Procedure oftener than is at present the case. The figures under the head " Offences relating to marriage " indicate that different Magistrates must have very different views regarding these prosecutions. There were 3,434 cases, in 2,096 of which process issued. Only 1,609 persons appeared before the Court, of whom 128 were discharged after appearance, 859 acquitted, and only 244 convicted ; 3,434 cases and 244 persons convicted—a result which shows that these cases are " frittered away " in different ways without any serious intention of bringing them to trial. The Magistracy cannot exercise too great caution in taking up and dealing with these cases ; but the above figures indicate in many cases an unwillingness, and even a refusal, to administer the law as it stands.

Remands.

Altogether 38,692 A. forms were sent up. They were disposed of as follows:—

				Percentage.
At first hearing	13,793	35.6
Remanded once	8,350	21.6
Ditto twice	5,310	13.8
Ditto thrice	3,537	9.1
Ditto four times	2,381	6.2
Ditto five times	1,430	3.7
Ditto six times	977	2.5
Ditto more than six times	1,868	4.8

There was a slight change or the worse in the percentage of cases decided at the first or second hearing, 57.2 against 59.7 in 1884. Pabna, Bakarganj, Maimansingh, Tipperah, Maldah, Manbhūm, and Balasor are singled out for unfavourable notice ; but it appears that those districts which show best owe their position in a considerable degree to the number of petty thefts and conservancy cases. In Bakarganj 123 cases out of 756, and in Maimansingh 172 out of 1,176, were remanded more than six times. The bad figures for Tipperah are attributed to the weakness of the magisterial staff at headquarters during the greater part of the year.

Re-convictions.

The total number of persons re-convicted during the year was 1,577, against 1,182 in 1884 and 1,159 in 1883. This net increase of 95 is satisfactory, as it accompanies a decrease of nearly 5,000 in cognizable crime. No doubt supervision is improving from year to year ; but in this respect India is still a very long way behind other civilised countries. The Mughya Domes settlements in Sarun and Champaran have continued to prosper, and in the latter district it was expected that the Domes would from this year be independent of Government aid. The Sarun Domes appear to be less easy to reclaim ; a quiet life of toil is said to be irksome to them, and 46 of them absconded during the year, no doubt upon thieving expeditions. Still the Magistrate notices a marked improvement in the cultivation of their lands and in respect of the feeling with which they are regarded by their fellow-villagers, by whom they are now employed as field-labourers.

The following comparative table shows the total number of cognizable and non-cognizable cases reported in the Town and Suburbs of Calcutta during the year 1885 and two preceding years:—

CRIME AND POLICE IN CALCUTTA AND THE SUBURBS.

				1883.	1884.	1885.	
Cognizable	...	{	Penal Code	...	4,546	4,638	4,132
			Miscellaneous	...	12,999	16,010	13,918
Non-cognizable	...	{	Penal Code	...	11,523	12,248	9,692
			Miscellaneous	...	15,114	18,692	19,999
Total				...	44,182	51,588	47,771

The decrease occurred mainly under the heads of street offences and public nuisances; but there was a substantial decrease of 506 cognizable offences under the Penal Code, the number of *thefts* being 242 less than in the previous year.

The number of persons arrested and summoned fell from 54,888 in 1884 to 46,781 in 1885, the number being more than a thousand less than in 1883. The number of persons convicted was 39,600, being 84·64 per cent. of those arrested, against 47,391 persons convicted in 1884, being 86·34 per cent. of those arrested. This decrease of 1·70 per cent. in 1885 occurred, however, wholly in non-cognizable crime and chiefly in conservancy prosecutions. The ratio of convictions to arrests for cognizable offences under the Penal Code was 65 in 1885, against 58 in 1884. Out of 11,921 persons convicted of offences, cognizable and non-cognizable, under the Penal Code, 6,371 were Mahomedans, 4,125 Hindus, 404 Christians, 18 Jains and Buddhists, and 3 Jews.

The proportion of false cases has been steadily decreasing year by year; there were 296 in 1885; against 473 in 1884, 532 in 1881, and 911 in 1879. Though convictions are said to have been obtained in 51 cases out of 60 in which prosecutions were instituted, yet sentences of imprisonment were awarded in three cases only.

The total value of the property stolen in Town and Suburbs fell from Rs. 1,53,184 in 1884 to Rs. 97,504 in 1885; while the percentage recovered fell from 68·75 to 49·65 (the same percentage as in 1878). It may, however, be noted that the percentage of 1884 was abnormally good owing to the fact that a large sum stolen in previous years was recovered in that year. In 1883 the percentage recovered was 51·74.

The following statement shows the number of true cognizable cases reported within the Town during the last three years:—

		1883.	1884.	1885.
Abetment of offence not committed		1
Class	I.—Offences against the State, public tranquillity, &c. ...	40	32	37
"	II.—Serious offences against the person ...	269	223	167
"	III.—Serious offences against person and property ...	131	162	139
"	IV.—Minor offences against the person ...	47	69	40
"	V.—Minor offences against person and property ...	2,225	2,309	2,156
"	VI.—Other offences not specified above ...	1,593	2,020	1,855
Special and local laws ...		9,786	12,389	10,391
Total ...		14,091	17,204	14,786

There were five murders and 1 case of culpable homicide in 1885, against six murders and four cases of culpable homicide in 1884; but, on the other hand, there were five attempts at murder, against one only in the preceding year. There was a satisfactory decrease in the number of cases of grievous hurt from 45 to 21, and of hurt by dangerous weapons from 51 to 44. The number of assaults on public servants has steadily fallen year by year. The homicidal statistics of Calcutta appear to show that in a majority of instances the murdered persons are prostitutes, or the murders are committed in the houses of prostitutes, or on account of women of that class. In 1885 three out of the five persons murdered were prostitutes, while the numbers in 1884 were four out of six. There were convictions in only two cases. In one of these memorials were submitted to the Lieutenant-Governor with a view to the exercise of the prerogative of mercy in favour of Tin Cowry Pal, who had murdered his mistress, a prostitute; but as there were no redeeming or extenuating features in the case, Sir Rivers Thompson declined to interfere, and the law was allowed to take its course. In another case all efforts to trace the murderer were unsuccessful. The unfortunate victim, who again was a prostitute, had exchanged her gold ornaments for brass before leaving her house to accompany her visitor to the house of assignation (a precaution which is commonly observed by women of that class), and thus the murderer failed to secure the valuable ornaments for which he appears to have committed the crime. The number of true cases of house-breaking and lurking house-trespass decreased from 160 to 146, and of

thefts from 1,790 to 1,640. The value of the stolen property in the latter class of cases (of which one-half was recovered) was Rs. 70,973, against Rs. 1,14,771 in the previous year, the amount recovered being Rs. 36,384 as compared with Rs. 82,429 in 1884. With regard to cases of criminal breach of trust, it is satisfactory to learn that, owing to the conviction of several habitual receivers, the practice of bleeding bags on cargo-boats has to a great extent ceased. A few sentences of imprisonment, without the option of a fine, under the Gambling Act have had the result of reducing the number of cases to 65, against an average of 89 in the five preceding years. The number of street offences fell from 6,552 in 1884 to 4,604 in the year under review. The lower ranks of the force have been warned to use their powers of arrest in such cases sparingly, and the fact that needless and vexatious arrests were not made appears to be patent from the fact that 99 per cent. of the persons put upon their trial before the Magistrate were convicted. Although an increased number of steamers and sailing vessels entered the port, the number of offences under the Shipping Acts decreased from 330 to 265. Under the Port Act there was again an increase in the number of prosecutions for carrying excess of passengers. Unless heavy fines are imposed in such cases, the profits derived render it worth while to run the risk of detection and prosecution.

The number of true cases was 2,998, against 2,971 in 1884. In two out of the five murder cases the victims were prostitutes, and in another case two little girls were poisoned with arsenic. Cases of house-breaking (including cases of lurking house-trespass) increased from 47 in 1881 to 101 in 1884 and 123 in 1885; but the value of the property stolen decreased from Rs. 6,958 in 1884 to Rs. 2,551 in 1885: of the latter amount only Rs. 644 was recovered, however, as against Rs. 2,478 recovered during the preceding year. The majority of cases were very petty. The number of thefts fell from 492 to 400, and the value of the stolen property from Rs. 15,185 to Rs. 10,391.

The number of non-cognizable offences reported in the Town was 27,256, or a slight decrease as compared with the figures for the previous year. In the Suburbs the numbers fell from 3,185 to 2,435. There was an increase of 1,541 prosecutions in the Town under the Conservancy Act, but a large decrease of 1,963 cases under the Penal Code, chiefly under the heads of rioting, affray, and public nuisances—a decrease which was said to be due to the orders issued to the police on the report for 1884, directing them “not to exceed their legal powers.” The necessity for amending the Calcutta Police Act of 1866, so as to enable the police to arrest drunken and riotous persons, and persons who are guilty of outraging the public decency by committing nuisances in the public streets, was brought to the notice of Government in 1885. It was certainly a defect that powers possessed by mofussil police under section 34, Act V of 1861, should not be possessed by the police in Calcutta; and as the necessity of extending the powers of the police in the directions above indicated was very pressing, a Bill was introduced to remedy the defect. This Bill was subsequently passed into law as Act II (B.C.) of 1886, and it is hoped that the evils complained of may now be reduced to a minimum. There was one case of extortion, in which a European constable and a native shop-keeper extorted a cheque for Rs. 1,000 from a European shop-keeper under the threat of reporting him for having in his shop certain improper articles for sale. The extortion was the result of a preconcerted conspiracy, in which the native shop-keeper appears to have been the prime-mover, and the accused were both found guilty and each was sentenced to two years’ rigorous imprisonment. In paragraph 10 of the Resolution on the report for 1883, it was directed that miscellaneous proceedings under the Criminal Procedure Code should in future be shown in class VI, heading 29. This was done in the report for 1885. It is noteworthy that there were no cases, either in Town or Suburbs, under Chapters X, XI, or XII (public nuisances, urgent nuisances, and disputes regarding possession of immoveable property). Out of a total of 451 cases in the Town, 441 fell under Chapter XXXVI (maintenance), and 10 under Chapter VIII (security for keeping the peace or for good behaviour). The number under Chapter VIII appears to be remarkably small for so large a city.

The following statement shows the quantity of arms and ammunition imported through the port of Calcutta during the past five years:—

YEAR.				Rifles.	Guns.	Pistols and revolvers.	Gunpowder.	Percussion caps.
				No.	No.	No.	lb.	No.
1881	60	180	252	81,694	19,320,600
1882	201	196	259	84,099	20,565,250
1883	248	254	177	64,675	15,917,036
1884	356	429	352	87,829	21,211,500
1885	271	410	423	61,050	22,377,600

The Fire-Brigade rendered assistance at 39 fires, of which 7 were in the Town, 17 in the Suburbs, 14 in Howrah, and 1 in the 24-Pergunnahs. The loss of property was only Rs. 99,254, against Rs. 5,60,348 in the previous year. There was only one serious fire in the Suburbs, which destroyed a jute store-house at Chitpore, containing 3,236 drums of jute. The most disastrous fire in the Town occurred in the Jorabagan section, and completely destroyed a range of brick-built godowns containing 4,000 drums of jute worth Rs. 14,000. None of the fires were attended with any loss of human life.

The total cost of the police in the Town increased from Rs. 4,28,783 in 1884 to Rs. 4,59,344 during the past year, the increase being principally due to the appointment of the new mounted police sanctioned in December 1884. The cost is met as follows:—

				Rs.
Paid by Municipality	2,89,290
Government contribution	1,00,149
Fees and fines	69,905

The cost of the River Police was Rs. 30,919, of Government guards Rs. 46,849, and of additional constables Rs. 29,438. The number of up-countrymen in the force amounted to 1,899, while it contained only 219 Bengalis; of the native officers 85 were Bengalis and 89 up-countrymen. Owing to the discipline enforced in the service, coupled with the fatigue and exposure which the duties entail, Bengali recruits will not come forward for enlistment. In the higher ranks there is said to be almost a sufficiency of Bengali-speaking men. The casualties in the

force amounted to only 333, or 10·88 per cent. Only 54 men were dismissed, against 114 in 1884 and an average of 105 in the five preceding years. Twenty-eight men died, giving a mortality of 9·13 per thousand, against 8·56 in the previous year. It is said that many others go home sick and die in their own country, which would account for the very low percentage of deaths recorded. Sickness is caused, it is stated, not by want of proper accommodation, but by exposure at night in malarious localities, and a large number of young up-countrymen break down every year before they become acclimatised. Cases of serious venereal disease have steadily increased since the abolition in 1883 of Act XIV of 1868.

In the Town previous convictions were proved against 280 habitual offenders, and 128 notorious criminals were photographed on their release from jail, and their names were registered by the Detective Department. It is satisfactory to note that great attention was paid to the registration of old offenders, and that no efforts were spared to keep under surveillance all members of the criminal class who are known to live by crime. The practice of entering only habitual offenders in the thana registers is a good one, as it saves an over-worked police force from a good deal of unnecessary labour, and at the same time enables supervision to be more concentrated upon the worst criminals.

The total number of persons killed by wild animals and venomous snakes was higher than that in any of the preceding four years. The following table shows the figures for the past five years:—

	1881.	1882.	1883.	1884.	85.
Killed by wild animals ...	1,367	1,267	1,302	1,547	1,711

* Adults—8,180.

Children—3,643.

As in the preceding year, the Patna Division showed the greatest number of deaths (2,481) and the Chittagong Division the least (191). In the Suburbs of Calcutta 13 deaths were reported during the year, all of which were caused by snakes. In the Chittagong Division the number of deaths was nearly the same as in the previous year, being 191 against 188. There was an increase in the number of deaths in each of the remaining divisions except the Patna Division, where the number fell from 2,919 in 1884 to 2,481 in 1885. The increase is chiefly noticeable in the number of deaths under the heads (1) "Tigers," (2) "Other animals," and (3) "Snakes," the figures being 510, 903, and 10,112, against 419, 792, and 9,614 respectively in 1884. The number shown against Bākarganj under the head "Other animals" includes 85 deaths caused by alligators. In the Rājshāhī Division, and in the districts of Maldah and the Santāl Pergunnahs, the increase in the number of deaths from snake-bites was due to the heavy rains that flooded the low lands and drove the snakes to seek shelter in and around human dwellings.

The total number of cattle killed fell from 12,397 in 1864 to 12,223 in 1885. The Presidency Division showed the largest number of deaths (3,201), and the Patna Division the least (258). In four of the divisions there was an increase, and in five a decrease. The increase in the Rājshāhī Division was said to be due to improved registration. In the Bhagalpur Division the bulk of the increase occurred in the Monghyr district, though there was also some increase in Purneah and the Santāl Pergunnahs. The increase in Monghyr and the Santāl Pergunnahs was also attributed to improved registration. The decrease in the Maldah district was owing to a large number of leopards and tigers having been killed during the year by *shikarees*, while that in the Soopole and Mudelpurah sub-divisions of the Bhagalpur district was attributable to the action of the river Kusi, which has washed away much of the jungle which formerly gave shelter to these animals. The number of cattle killed by tigers and leopards and panthers was 4,751 and 5,156, against 5,033 and 5,799 respectively in 1884; while the number killed by wolves and hyenas amounted to 851 and 773, against 531 and 286 respectively in the preceding year. The number killed by leopards and panthers in the Nadiyá district

fell from 2,842 in 1884 to 2,045 in 1885. This showed a slight improvement, but the figure for 1885 was still very large, and the attention of the Commissioner was again drawn to the matter. The number killed by wolves and hyenas in the Presidency Division was shown to have been 257 and 231, against 24 and 14 in the preceding year. The Commissioner stated that the wolves referred to above were either leopards, hyenas, or jackals, as there are no wolves in any of the districts of the division. The number of deaths caused by snakes was nearly the same as in 1884, viz. 311.

The number of wild animals destroyed was 5,932, against 6,906 in 1884. There was a decrease in all the divisions except Chittagong, where the number increased from 256 in 1884 to 270 in 1885. The Rájsháhí Division showed the largest number of animals destroyed (1,474), but there was a falling off of 288 as compared with the figure for 1884. The two districts of this division which showed the largest decrease were Rungpur and Jalpáiguri. The decrease in the former district was due to the amount placed at the disposal of the Magistrate for expenditure during 1885-86 on account of rewards being insufficient for the carrying on of systematic operations. The decrease in Jalpáiguri was said to have been due to a diminution in the number of wild beasts in the southern portion of the Dooars. In the Bhagalpur Division the number killed was 879 against 1,043 in 1884. The decrease was observable in all the districts of the division except Maldah. In Bhagalpur the number of wolves killed fell from 337 in 1884 to 86 in 1885. The decrease was said to have been due to the fact that a *shikaree* was punished for an attempt to pass off the heads of jackals as those of wolves. In Nadiyá no tigers or leopards were killed by professional *shikarees* during the year. In the Santál Pergunnahs, owing to a good harvest, the people were not driven to kill wild animals for the sake of the reward. The increase in Maldah was attributable to a large number of tigers and leopards having been killed by *shikarees* in expectation of rewards on the sanctioned scale, which, however, could not be paid at the time for want of funds.

No special measures other than the issue of free quinquennial licenses under the Indian Arms Act were adopted in any of the divisions for the destruction of wild animals and venomous snakes. In the Presidency Division, 124 licenses, either for the destruction of wild animals or for the protection of crops, were granted in the 24-Pergunnahs, 217 in Nadiyá, 57 in Murshidábád, 779 in Jessor, and 1,559 in Khoolna. In the Bardwán Division two licenses were granted in Midnapur for the protection of crops as well as for the destruction of wild animals, and 994 in Bírghúm, both for self-protection and destruction of wild animals. In the Bhagalpur district 683 licenses were granted in Form VIII and 11 in Form XI, and in Purneah and the Santál Pergunnahs the number of licenses issued in Form VIII was 1,595 and 362 respectively. The District Officers were unable to furnish the exact number of licenses granted in these districts for the protection of crops and for the destruction of wild animals, as neither the register of licenses kept in their offices, nor the applications for licenses, give sufficiently exact information on the point. The officers in question were directed to see that correct information is furnished under this head in future. In the districts of Monghyr and Maldah 17 and 373 licenses respectively were granted for the protection of crops and 107 and 1,075 for the destruction of wild animals. As regards the Patna Division, 5 licenses were granted in Gya, 16 in Sháhábád, 3 in Sarun, and 32 in Champárun. In the Rájsháhí Division 39, 15, and 72 licenses in Form XI were granted in the Rájsháhí, Pabná, and Rungpur districts respectively. Of 2,942 licenses for the possession of arms granted in Dacca, only 22 were given for the destruction of wild animals, and the rest for the protection of person or crops. In Bákarganj 2,566 licenses were granted during the year, and in Maimansingh 1,158. The Magistrates were, however, unable to specify the number given for the destruction of wild animals. In Farídpur 13 quinquennial licenses were granted for the destruction of wild animals and the protection of crops. In Balasor 4 licenses in Form XI were granted. In Purí 1 license was granted in 1882 for a term of 5 years, which is still in force. In the Hazáribágh and Lohárdagá districts of Chutiá Nágpur the number of licenses issued for protection of crops was 492 and 1,731, and the number issued for destruction of wild animals 4 and 54 respectively. In the Chittagong district 1,012 licenses were issued for possession of arms, most of

which were for protection from, and destruction of, wild animals. In the Noakholly district 2 licenses were granted for the destruction of wild animals. In the Chittagong Hill Tracts, where the Arms Act is not in force, 177 cut-down muskets were given to the people living in outlying places for the protection of themselves and their crops, and also for the destruction of wild animals.

The number of snakes destroyed was 53,995, against 51,787 in 1884 and 38,856 in 1883. There was a decrease in all the divisions except Rájsháhí and Patna, where the figures rose from 659 and 27,127 in 1884 to 1,250 and 34,364 respectively in 1885. In the Patna Division there was an increase in all the districts except Gya and Champáran. The decrease in these two districts was said to have been due to the fact that there was no money available for payment of rewards. No explanation was given of the cause of the increase in the Rájsháhí Division: the disproportion between the number of snakes destroyed and the amount paid as rewards was due, as in the preceding years, to the fact that people residing at a distance seldom thought it worth their while to undertake a long journey for the sake of a small reward. The number of snakes killed in the Bardwán Division was 2,065, against 2,387 in 1884. The decrease occurred principally in the Bánkura and Bírblúm districts, where the figures fell from 363 and 820 in 1884 to 243 and 333 respectively in 1885. In Bánkura the decrease was owing to the payment of rewards having been stopped in the middle of the year for want of funds. The number of snakes killed in the Bhagalpur Division was 8,922, against 11,342 in 1884. The largest decrease (from 1,358 to 617) occurred in the Bhagalpur district. The Magistrate ascribed the decrease to the gradual reduction in the rates of reward paid for the destruction of snakes. In Purné the decrease was owing to the fact that towards the close of the year no rewards could be paid, as the expenditure on this account had exceeded the sanctioned allotment. The decrease in the Santál Pergunnahs was, as in the case of wild animals, attributed to a good harvest. The returns for Calcutta and the Gurjat Mehals were, as usual, blank. In Dinagepur, Dárjiling, and Maimansingh only 3, 1, and 3 snakes respectively were killed, as compared with 1, 4, and 75 in 1884. In Chittagong, Noakholly, and the Chittagong Hill Tracts, where 93,627, and 57 snakes respectively were killed, no rewards were paid for their destruction. The system of paying rewards for the destruction of venomous snakes on the authority of certificates granted by indigo-planters was in operation during the year in the districts of Muzafferpur, Durbhanga, and Monghyr. In the last-named district the system was said to have worked well.

Rewards for the destruction of snakes were offered by municipalities in all the divisions of Bengal; but the amounts actually paid were very small, except in the Patna Division, where a sum of Rs. 1,746-10-6 was expended, against Rs. 1,630-2-6 in 1884. The total amount paid in rewards for the destruction of snakes was Rs. 9,738-14, against Rs. 10,081-2-6 in 1884, of which municipalities paid the sum of Rs. 2,484-3 in 1885 and Rs. 2,801-12 in 1884. While, therefore, there was a decrease in the total expenditure on account of rewards, there was an increase of 498 in the number of persons and three in the number of cattle killed by snakes as compared with the deaths from the same cause in 1884.

The total amount paid in rewards was Rs. 29,884-4, against Rs. 42,374-11 in 1884. Of this sum, Rs. 20,145-6 were paid for the destruction of wild animals, against Rs. 32,293-8-6 in 1884. The difference was due partly to the reduction, on account of financial pressure, of the grant provided in the Provincial budget for the year 1885-86 under the head of "Rewards for the destruction of wild animals and venomous snakes," and partly to a decrease in the number of tigers and wolves destroyed during 1885. No rewards were paid for the destruction of wild animals in the Suburbs of Calcutta or in the districts of Bírblúm and Howrah. The largest expenditure was incurred in the Chutiá Nágpur Division, where a sum of Rs. 6,118-2 was spent in this manner.

CHITTAGONG HILL TRACTS.

THE strength of the Frontier and Civil Police during 1885 was the same as in the previous year, viz. 647, as shown in the margin. The force was 32 under strength at the close of the year. It is now recruited entirely from Goorkhas, and some difficulty was experienced in obtaining the full num-

Strength of force.

	Frontier police.	Civil police.	Total.
Subadar-Major	1	1
Subadars	5	5
Sub-inspector	1	1
Jemadars	6	6
Havildar-Major	1	1
Havildars	27	27

Naiks	42	42
Bugle-Major	1	1
Buglers	10	10
Privates	440	446
Constables	97	97
Total	539	+108	647

to the formation of three new Goorkha regiments of the line.

Cost.

The total cost of the force (including the pay of the District and Assistant Superintendents) was Rs. 2,18,969, against Rs. 1,92,291 in the previous year.

There was no change in the disposition of the Civil Police during the year.

Distribution.

The police of the northern post at Demagiri were used as patrols both to the north and south, instead of being placed at outposts, as the District Superintendent and the Deputy Commissioner considered this the most effective means of employing them. The Inspector-General, however, ordered Sirthay outpost to be re-occupied. The experimental head-quarters at Raicha, in the south, were abandoned, and Ruma, which is the most suitable place, is again the head-quarters of the Frontier Police.

All the subadars and jemadars can read and write. Out of 91 inferior officers, 56 can read and write, and out of 543 privates and constables, 198, or 36 per cent., are

Education.

educated.

The District Superintendent was not satisfied with the drill and musketry of the force, and the officers were said not to be as good in their drill as they might be, and did

Drill.

not render the District Superintendent the assistance he was entitled to expect from them. With a view to remedying this defect, an application has recently been made to the Government of India, in the Military Department, for the services of two well-drilled men from one of the Goorkha regiments of the line.

The total casualties were 85, against 76 in the previous year. There were 20 deaths, against 16 in 1884. Thirteen

Casualties.

men deserted or were dismissed for overstaying leave, 24 resigned, 9 were dismissed, and 19 were discharged on pension or gratuity.

The year was generally an unhealthy one in the hills, and there were 2,266 admissions into hospital, against 1,528 in the previous year.

Admissions into hospital.

The conduct of the force was generally good, only one havildar and five recruits having been punished for misbehaviour, the first by dismissal, and the recruits judi-

Conduct.

cially. In the civil police a head-constable and a writer-constable were dismissed on account of bribery.

Inspection was decidedly better than in the previous year. In the Hill Tracts there is but little crime, and it is the frontier posts that require inspection.

Inspection.

But little was done during the year in the way of improving communications. A surveyor joined after the close of the year, and laid down a new line from Ruma to

Communications and transport.

Polytai. The formation of a coolie corps was sanctioned towards the close of the year. This corps will be used both for transport, when necessary, and for opening communications. Three new elephants were purchased during the year at a cost of Rs. 4,000, bringing the total up to the sanctioned number

of seven. One animal died, however, in the course of the year, and another after its close. The nine mules which were left alive were to have been sold as soon as the coolie corps had been established.

- A sum of Rs. 9,430 was spent from the Police budget on buildings, of which Rs. 3,356 were expended on petty repairs and Rs. 6,074 on petty constructions below Rs. 1,000.

Buildings.

In addition an expenditure of Rs. 8,400 was incurred from the Public Works Department budget. The barracks at Rangamati were reported to be in a wretched condition, and new barracks are under construction.

There were 53 cognizable cases, against 33 in the previous year. There was an increase of 4 cases under class II (serious offences against the person); of 4 cases under class III (serious offences against person and property, or against property only); and of 13 cases under class V (minor offences against property); and a decrease of 1 case under class IV (minor offences against the person). The increase in class V was chiefly in petty thefts of grain, as the year was one of considerable want in parts of the Hill Tracts. The dacoities were technical ones only. One man was killed by raiders (believed to be *Mulienpois*) in the Rankheong valley in February 1885.

Crime.

The police investigated all cases. Out of 86 persons arrested by the police in cognizable cases, 52 were convicted. Five police cases were committed, 4 under class II and 1 under class III. Sixteen persons were sent up, and they were all convicted.

The police were not successful in the recovery of stolen property, though they recovered property in a fair proportion of cases. Something was recovered in 21 cases out of 36, or in 58·3 per cent., but the value of the property recovered was only Rs. 428 out of a total value of Rs. 4,031 lost, or 10·6 per cent.

There was a large decrease in non-cognizable crime, the number of cases having fallen from 532 in 1884 to 65 in 1885. The decrease was almost entirely under class I (offences against the State, public tranquillity, &c.), the number of cases for the two years having been 505 and 27 respectively, and was due to the cessation of prosecutions under section 188 for non-production of guns. The other fluctuations are unimportant. Process was issued against 149 persons, and as usual a larger number (157) appeared. Of these 92 were convicted and 16 were awaiting trial, the remainder (49) being acquitted.

Criminal Justice.

THERE were 141 persons under trial before the High Court in its criminal jurisdiction during 1885, against 155 in the previous year. Of these, 31 were discharged or acquitted, 93 were convicted, and 12 remained under trial at the end of the year. The cases of 5 persons were remanded for re-trial. Of the number convicted, 31 were sentenced to death, 18 to transportation, 1 to penal servitude, 42 to rigorous imprisonment, and 1 to simple imprisonment. A fine was imposed in only one case.

Including cases pending at the commencement of the year, the total number of persons who appealed to the High Court, or in whose cases appeals were preferred by Government, under section 417 of the Code of Criminal Procedure, from judgments of acquittal, or references were made under sections 432 and 438, or whose cases were dealt with by the High Court under section 435, was 2,954, as compared with 2,612 in 1884. The results of these appeals and references are shown below :—

Appeals rejected	1,300
Sentences confirmed	638
Ditto modified	208
Ditto reversed	537
Ditto enhanced	16
Proceedings quashed	14
New trials or further enquiries ordered	113
					<hr/> 2,826 <hr/>

The number undisposed of at the end of the year was 126.

Two Stipendiary Magistrates were, as in previous years, employed in Calcutta, but the number of Honorary Magistrates in the town was increased from 92 in 1884 to 103 in 1885. Benches consisting of two or three Honorary Magistrates, unassisted by a Stipendiary Magistrate, continued to hold sittings in Calcutta during the year for the trial of criminal cases on fixed days in each week. The number of Sessions Judges at the close of the year was the same as at the close of 1884, viz. 30. Including District Magistrates, but excluding the Magistrates (Stipendiary and Honorary) in Calcutta, the total numbers of Magistrates of each class at the close of 1884 and 1885, respectively, were—

	1884.	1885.
Stipendiary	376	390
Honorary	1,394	1,541

Of the Stipendiary Magistrates, 243 exercised powers of the first class, 56 of the second class, and 91 of the third class, as compared with 233, 72, and 71, respectively, during 1884. The total number of Benches of Magistrates in the interior was 174, or two more than in the previous year.

The total number of persons under trial before the Courts of Session, including those whose cases were pending at the close of 1884, was 3,271, as compared with 3,212 in the previous year. Of these, the cases of 92 were committed or referred to the High Court, 1,214 were acquitted or discharged, 18 died, escaped or were transferred, 1,540 were convicted, and 409 remained

under trial at the end of the year. Of the persons convicted, 49 were sentenced to death and 181 to transportation. The districts in which trials by jury were held and offences were so triable remained as in previous years. The number of trials by jury was 348, as compared with 346 during the previous year. In the past year, Sessions Judges approved of the verdict of the jury in 282 cases, disapproved of it wholly in 35 cases, and partially in 31 cases. In 26 cases only did Sessions Judges disagree with the verdicts so completely as to consider it necessary for the ends of justice to submit the cases to the High Court as a Court of Reference. In 25 cases heard by the High Court on reference under section 307 of the Code of Criminal Procedure, the verdicts were set aside in 18 cases, new trials were ordered in 3 cases, and in the remaining 4 cases the verdict was accepted.

The total number of persons who appealed to the Courts of Session during the year, including those whose cases were pending from the preceding year, was 9,067, as compared with 8,296 in 1884. Of these, the appeals or applications of 2,151 were rejected. The original sentence was confirmed in the case of 3,865 persons, modified in the case of 840 persons, and reversed in the case of 1,716 persons. In the case of 3 persons the original proceedings were quashed, and in that of 63 a new trial or further enquiry was ordered. In no case was the sentence enhanced. The total number of persons whose appeals or applications were disposed of was 8,639. The appeals of 127 persons remained pending at the end of the year. The case of only one person is shown under the head of "Died, escaped, transferred."

The total number of persons under trial during the year before the courts of the various Magistrates in Bengal, excluding the courts of the Presidency Magistrates, and the results of the trials, are shown below:—

Number of persons under trial	177,795
• Ditto acquitted or discharged	64,197
Ditto convicted	104,419
Ditto committed	3,061
Ditto who died, escaped or were transferred	313
Ditto remaining under trial at the end of the year	5,815

The following statement shows the sentences passed by Magistrates in the districts outside of Calcutta:—

Fine	{ With imprisonment	4,186
	{ Without " "	71,240
Whipping	{ Sole punishment...	1,496
	{ Additional " "	161
Imprisonment	{ Rigorous	24,235
	{ Simple	823
Forfeiture of property	2

The sentences of imprisonment passed may be thus classified:—

Not exceeding 15 days	5,424
Ditto 6 months	15,166
Ditto 2 years	4,436
Exceeding 2 years	32

Fifty-nine juveniles were sentenced to detention in a Reformatory School, against 100 in 1884 and 44 in 1883. Fifty-one juveniles were so sentenced by Magistrates in the interior, 6 by the Presidency Magistrates, and 2 by the Sessions Judges of Rájsháhí and Sarun, respectively.

The total number of persons under trial before the Presidency Magistrates was 39,113, as compared with 46,240 in 1884. Of the former number, 4,242 were acquitted or discharged, 34,753 were convicted, 45 were committed to the sessions, 15 died, escaped or were transferred to other courts, and 58 remained under trial at the close of the year. Of those convicted, 1,411 persons were sentenced to imprisonment, 84 to whipping, and 29,685 to pay

finer. Besides the persons shown as sentenced to imprisonment, 4 persons were sentenced to rigorous and 1 person to simple imprisonment for terms not exceeding one year, on failure to furnish security for good behaviour.

During the year, 242 European British subjects, involved in 216 cases, were brought to trial in the criminal courts of 19 districts, as compared with 291 persons, involved in 227 cases, who were brought to trial in 20 districts in 1884. Of the persons tried in 1885, 189 were convicted and 51 acquitted or discharged. Of the 214 cases disposed of during the year, 211 were tried by European Magistrates, and 3 by Native Magistrates in Bardwán and Nadiyá. The districts in which the largest number of such trials was held were, as in 1884, Chittagong (101), Dárjiling (30), Howrah (27), and the 24-Pergunnahs (23). The offences with which the European British subjects were commonly charged were breaches of local and special laws (under which 156 were charged), criminal force and assault (38), and hurt (13). Out of 156 persons charged with offences under local and special laws, 92 were reported from Chittagong alone, of whom 51 were charged with offences under the Merchant Shipping Act (I of 1859), and the rest with committing offences on roads under section 34 of Act V of 1861. Nine persons in Dárjiling and 7 in the 24-Pergunnahs were charged with criminal force and assault: the trials of the remaining 22 persons similarly charged were distributed among 13 other districts. None of the persons tried before Magistrates claimed to be tried by a mixed jury.

The total number of witnesses who attended the different courts during the year was 422,629, as compared with 422,984 in 1884. Of the former number, 410,602 were examined by Magistrates, 11,588 by Sessions Courts, and 439 by the High Court in its Original Jurisdiction.

The number of persons whipped under judicial orders during the year was 1,965, or 138 in excess of the number for the previous year. The figures for the five years preceding 1885 are given below :—

1880	2,919
1881	2,425
1882	1,604
1883	1,261
1884	1,827

Out of the total of 1,965 instances in which whipping was inflicted during 1885, in 85·14 per cent. of the cases it was inflicted for theft, in 6·31 per cent. for receiving stolen property, and in 3·16 per cent. for criminal house-trespass. In 1,033 cases the number of stripes inflicted was less than 15, and in 226 cases only it was between 25 and 30 stripes.

The statistics of offences and offenders are fully discussed in the chapters on Police and Prisons.

The following statement shows the total number of persons who were under trial during the year in the criminal courts of the Santál Pergunnahs, and the results of the trials :—

Total number of persons under trial	4,234
Ditto ditto convicted	3,063
Ditto ditto discharged or acquitted	1,076
Ditto ditto committed or referred	13
Ditto ditto who died, escaped or were transferred	1
Pending for trial at the end of the year	81

Of the 3,063 persons convicted, 1,149 were sentenced to imprisonment, 186 to whipping, and the remainder were ordered to pay fines or to furnish security to be of good behaviour or to keep the peace. Two hundred and thirty-eight appeals were preferred and applications made for a revision of

the original order. The results of these appeals and applications are shown below :—

Appeals or applications rejected	20
Sentence or order confirmed	139
Ditto enhanced	5
Ditto modified	32
Ditto reversed	1
Proceedings quashed	20
Fresh trial ordered	2
Referred for revision to the High Court	19
Remaining at the end of the year	

Prisons.

THE duties of inspection were thoroughly carried out during the year. Sixty-three central and district jails, seven subsidiary jails, the reformatory schools at Alípur and Hazáribágh, and the lunatic asylums of Cuttack and Dacca, were inspected by the Inspector-General of Jails. Mr. E. V. Westmacott, c.s., officiated as Inspector General of Jails from the 1st January to the 25th September 1885, and Dr. Lethbridge was in charge during the remainder of the year.

The following table shows the number of prisoners in all the jails of the province during the past ten years :—

	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.
Number of prisoners of all classes in jails and subsidiary jails on the last day of previous year	21,282	21,266	18,154	19,235	18,375	17,305	16,367	15,595	14,719	15,354
Total number admitted during the year	96,970	89,653	99,601	89,974	82,356	77,704	77,981	74,613	80,862	80,853
Total	118,252	110,921	117,755	109,209	100,731	95,009	94,318	90,238	95,570	96,207
Total discharged	96,986	92,767	98,543	90,860	83,406	78,642	78,753	75,520	80,216	81,131
Balance at the end of the year	21,266	18,154	19,212	18,349	17,305	16,367	15,595	14,719	15,354	15,076
Daily average of all classes	21,820	18,855	18,812	18,693	18,901	16,747	16,155	15,926	15,101	15,177

The daily average population increased from 15,101 in 1884 to 15,177 in 1885. The difference (76), however, was not large, and is probably due to the fact that scarcity prevailed for some part of the year in certain districts, and led to an increase of petty crime. The central jails contained a larger proportion of the total prison population than they have ever done before—55·96 per cent. in 1885, as compared with 54·36 in 1884. The proportion in district and subsidiary jails was 42·05 and 1·99 respectively. As no prisoner sentenced to less than six months is sent to a central jail, the above figures necessarily point to an increase in the number of sentences of six months' imprisonment and upwards.

There was a very slight difference between the number of prisoners released in 1885 and the number released in the previous year. 27,379 prisoners were released on expiry of sentence, as against 27,345 in the previous year. The number released on appeal increased from 1,670 to 1,750, the ratio per cent. being highest in Chittagong (15·4), Noakholly (13·9), Dinagepur (13·4), Pabná (13·3), and Balasor (13·0). The number discharged under the mark system decreased from 1,665 to 1,565, and the result is due to the fact that the mark system has been more carefully worked, and that the number of prisoners sentenced to two years and over (to whom alone the system is applicable) is decreasing. Twenty-two prisoners were released on medical grounds, and 75 comparatively short-term prisoners were discharged with the sanction of Government from the Hazáribágh Jail on the 21st July owing to a severe epidemic of cholera.

The number of convicts transported beyond sea decreased from 521 to 468. Seventy-two were rejected by the Medical Board at Alípur, against 107 in 1884, the number of rejections from Bengal being two less than in the previous year. The rejections from other provinces fell from 70 to 37.

As regards religion, the marked decrease in the number of Christian prisoners still continues. There was a very slight decrease in the number of Mahomedans, while the number of Hindus received into jails decreased from

Religion, age and previous occupation of convicts.

18,375 to 17,975, their percentage to the total number of convicts showing a slight fall from 57·36 to 57·01. The previous occupation of convicts presents only one feature worthy of remark, namely, that the number of persons imprisoned, who were in Government employ, decreased from 1,407 in 1884 to 1,228 in 1885. This decrease indicates either that a closer supervision is exercised by the Government officers over their native subordinates, or that the *morale* of the latter has improved under the influence of education. The number of juvenile (those under 16 years of age) convicts decreased from 408 in the previous year to 355.

There has been a decrease in the number of sentences not exceeding three months, a marked increase in those from three months to two years, and a decrease in sentences from two to ten years. The number of prisoners sentenced to simple imprisonment has increased from 1,868 in 1884 to 2,028 in 1885, while sentences of rigorous imprisonment show a slight decrease from 30,005 to 29,314.

Length of sentence, and character of imprisonment.

The number of female prisoners admitted direct into jail was 1,573, of whom 666 were married, 37 unmarried, 714 widows, and 156 prostitutes. The large proportion of widows and prostitutes is noticeable. The proportion of Hindu females to Hindu male prisoners is 5·8 per cent; whereas the proportion of Mahomedan females is only 4·0. The reason for this smaller percentage is that there are fewer widows and unprotected females among Mahomedans, and generally a greater seclusion of females.

Female prisoners.

At the close of the year 1884, 106 Burmese prisoners were confined in the jails of Bengal. Twenty were received during 1885 and five died, leaving 121 at the close of that year. The conduct of these prisoners has during the past year continued to be good. Fetters have been removed from most of these men, who have been for two or three years in our jails, and others have been promoted to be night watchmen. As workmen they continue to do excellent service.

Burmese convicts.

The number of re-convicted prisoners decreased from 3,915 to 3,644, or from 12·22 to 11·55 of the total number of convictions. It is a significant fact that the number of habituals admitted to jail showed a considerable decrease in certain districts in which attention was given to prosecutions for bad livelihood. On the other hand, in Lohárdagá, where there were no such prosecutions, and in Maimansingh, where there were only two, the number of habituals admitted to jail were respectively twice and nearly four times as many as the number admitted in 1884. The number of bad characters imprisoned in default of security was 659, against 556 in 1884.

Re-convicted prisoners and bad characters.

The number of prisoners unable to read or write was 87·0 per cent. of the whole, those able to read or write a little 9·7, and those able to read or write well 3·3 per cent.

Education.

These figures show but little difference from the previous year. Experience in England has shown that literary education has not produced the good results on prisoners which were once expected from it; in India industrial instruction is perhaps the most potent of the educational influences available to Government for the purposes of reformation.

The daily average number of under-trial prisoners was 1,169, against 1,170 in 1884. The number convicted was 14,456, or 48·8 per cent. of the total admitted, against 48·2 per cent. in 1884 and 45·1 per cent. in 1883. The accommodation for under-trial prisoners has been increased in certain third class district jails, and it is hoped that there will be no overcrowding in future. The average period of detention was 17·36 days, against 17·30 in 1884. The number of civil prisoners admitted increased from 3,545 to 3,793.

Under-trial and civil prisoners.

The system of classification requires the complete segregation at all hours of female, juvenile, under-trial, and civil prisoners, and, as far as possible, the complete separation of habituals (B class) from those convicted for the first time. The number of offences committed by prisoners was 48,789, against 56,564 in 1884. Having regard to the total jail population,

Prison discipline, guards, and escapes.

the number of offences may appear to be somewhat excessive ; but all offences in Bengal jails are carefully recorded, even though the offence be of a very petty character. The following table shows the nature of offences committed in 1885 and the four previous years :—

	Criminal offences.	BREACHES OF JAIL RULES.			Total offences.
		Smoking or having possession of forbidden articles.	Offences relating to work.	Other offences against prison discipline.	
1885	70	2,713	25,702	20,214	48,789
1884	91	3,250	31,303	21,890	56,534
1883	88	3,320	26,852	18,620	48,880
1882	70	3,604	26,602	18,288	48,570
1881	111	3,711	27,963	17,964	49,749

Owing to the depression in the jute trade, the Alipur Jail has been working at half time, and this jail alone accounts for a decrease of 4,891 offences relating to work. The decrease under the head of “smoking or possession of forbidden articles” is due to the stoppage of building work, as, when this is going on, large bodies of free artisans come into the jails and work in company with the prisoners. The following table compares the statistics in regard to punishments for the last five years :—

	By criminal courts.	BY JAIL OFFICERS.					Total punishments.
		Solitary confinement.	Reduced diet.	Solitary confinement with reduced diet.	Corporal punishment.	All other punishments.	
1885	71	3,333	2,486	472	347	42,081	48,790
1884	85	3,688	3,973	522	345	37,945	56,538
1883	77	3,261	2,365	2,317	343	40,170	48,569
1882	79	3,067	5,087	3,698	416	36,827	48,574
1881	101	2,163	9,411	2,258	914	34,563	49,710

For the reason above noticed, the Alipur Jail accounts for a decrease of 6,872 out of a total decrease of 7,768 punishments. The punishment of reduced diet has been discouraged under the orders issued last year, and the number of instances in which it was inflicted decreased from 3,973 to 2,486. Corporal punishment was inflicted in only 347 cases. The number of whippings per 1,000 of the prison population was very little over 3, whereas the yearly average in English convict prisons was 11·13 per 1,000 for the five and a half years ended 31st March 1878, and 9·8 for the six years ended 31st March 1885. Solitary confinement was inflicted in 3,333 instances, against 3,688 in 1884. Under the relaxations prescribed by the Jail Code, this punishment is far less severe than solitary confinement as carried out in the case of judicial sentences under the Penal Code.

All jails, except the Alipur Jail, at which there is a military guard, are now guarded by warders. Police guards were temporarily employed at Hazáribágh and Champáran owing to an outbreak of cholera. There has been much sickness amongst the warders, especially in the malarious districts of Bengal Proper. A special allowance had to be sanctioned by Government for warders in unpopular districts, and since then there has been a decided improvement in the guards, and there is no want of recruits. Punishments were inflicted in 3,133 instances on head-warders and warders. There were only 14 escapes of convicted prisoners, against 24 in 1884; but 20 under-trial prisoners escaped from subsidiary jails, such escapes being in some cases due to the insecure condition of the buildings and the fact of there being no enclosing walls of masonry, but only palisades of bamboo. Out of the escapes of convicted prisoners, eight were from jails and six from subsidiary jails. There has been a steady decrease since 1870, when the number of escapes was 192; and in the year under report 37 jails out of 45 in the province show no escapes. The worst case in the list of escapes was that which occurred in broad daylight from inside the Pabná Jail, showing extremely defective arrangements for guarding. In one case

at Barisal a water gang of four prisoners was being taken, as usual, to the river, when one of them deliberately ran off, but eventually surrendered himself while the police were searching for him. Of the 14 convicted prisoners who escaped, all but three were recaptured.

Excluding the charge for buildings constructed under the Public Works Department, the gross expenditure on jails and subsidiary jails amounted to Rs. 11,16,423, being higher than any year since 1880, and Rs. 59,933 more than in 1881. There was an increase under every head. The total expenditure on subsidiary jails alone (again excluding public works) was Rs. 85,222, against Rs. 83,368 in 1884, the increase being due to higher prices paid for provisions, and the entertainment on the warder staff of men drawing higher pay than in the previous year. The daily average population of convicts and under-trial prisoners increased from 14,125 in 1884 to 14,198 in 1885. There must, therefore, necessarily have been some increase in the cost of diet, even had the relative prices of the various items composing it remained the same; but in fact there was an increase in the average price both of rice and dall, the two principal articles of diet used. From the comparative table of prices submitted by the Inspector-General of Jails, it appears that rice rose from Rs. 2-8-2 in 1884 to Rs. 2-8-7 per maund in 1885, and dall from Rs. 2-6-10 to Rs. 2-7-9. On the other hand, the price of wheat and Indian-corn decreased, and some of the Behar jails show a less expenditure. Meat and salt were cheaper, but fish dearer. The expenditure on diet per prisoner was under Rs. 20 in the jails of Sháhábád, Mánbhúm, Baxár, Sarun, Singbhúm, Bhagalpur (district), and Purí; while it exceeded Rs. 27 in Dárjiling, Lohárdagá, Dacca, Chittagong, Muzafferpur, and Hazáribágh.

The charges for establishment rose from Rs. 3,88,181 in 1884 to Rs. 3,94,703 in 1885; hospital charges from Rs. 39,071 to Rs. 49,142; clothing from Rs. 58,314 to Rs. 69,487; and contingencies from Rs. 76,829 to Rs. 88,350. There was an increase of sickness during the year, and many prisoners, though not actually in hospital, were given extra diet. The increase on account of clothing to a figure never reached before, viz. Rs. 4-14-3 per head, was to a very small extent due to the provision of warm juncabs for weak prisoners in unhealthy jails. Transfer charges and travelling allowance increased owing to the attempt to introduce Behar warders into Bengal jails, a change in the system of giving privilege leave to jailors and assistant jailors, and the transfer of a large number of prisoners to central jails and from central jails to district jails in the case of police registered prisoners, who, under orders of Government, are released in the districts in which they were convicted. The expenditure under the head of petty construction and repairs was Rs. 23,104, against Rs. 17,214 in the previous year. Some useful work was done in constructing or improving latrines, privies, and bathing platforms. Taking the gross expenditure for all jails, it comes to this that the average cost of each prisoner to Government has risen from Rs. 69-15-4 in 1884 to Rs. 73-9-0 in 1885—a rate higher than that of any year on record.

The average daily number of prisoners sentenced to labour increased from 13,521-78 in 1884 to 13,600-25 in 1885. The daily average number of sick increased from 720-80 to 756-81, and of the convalescent and infirm from 821-10 to 1,045. The total average number of prisoners employed on manufactures decreased from 6,178-18 to 6,340-96, the proportion to the total number of prisoners showing a decrease from 47-90 to 46-62 per cent. The net cash earnings increased from Rs. 2,86,517 to Rs. 3,65,202, or an earning of Rs. 57-10 per head on the average number employed on manufactures only. The Presidency Jail heads the list with an average earning per prisoner of Rs. 80-7. The tent-making industry at Buxar has been established on a sound footing, and in future this jail will, under the recent instruction of the Government of India, receive a large number of orders. The smaller earnings in the other central jails (except Bhagalpur) is attributed to a diminished demand, to lower prices for coir and hand-made cotton goods, and to a reduction in the tasks owing to an unhealthy year. Among district jails, that at Dárjiling stands first with an average earning of Rs. 63-14. The bread-making here has continued to be carried on very successfully and is of

Employment of prisoners, and manufactures.

great benefit to the station, where bread of good quality is not procurable in the market. The outstandings due to the jails at the end of the year were in some cases very large.

Subsidiary jails continued to be, as in previous years, under the direct management of sub-divisional officers with civil hospital assistants as Deputy Superintendents. The number of visits of inspection paid by a sub-divisional officer should never fall below 77, that is, eight fortnightly visits during his four months' tour, and two visits a week during the remainder of the year. There has been a marked improvement in this respect during 1885, and no fewer than 32 jails were visited by their Superintendents more than 100 times during the year. In six instances the number of visits paid was below 60.

The total number of prisoners admitted to subsidiary jails was 28,014, against 28,625 in 1884, the daily average number being 728·18, against 743·00. The number of convicted prisoners admitted was 14,120, against 14,519 in 1884. The average period of detention of under-trial prisoners exceeded 20 days in the jails of Chandpur, Gobindpur, and Kishoreganj.

With reference to the Report and the Resolution on the administration of jails for 1884, the Government of India remarked that a comparison of the health statistics of Bengal jails with those of other provinces clearly showed that much might still be done to ameliorate the condition of prisoners in the Lower Provinces, and added that "the prison mortality of Bengal cannot be considered satisfactory when contrasted with the death-rate of the free population of the province; for, as stated by the Officiating Inspector-General, the ratio obtained by a very careful registration carried out in Nuddea (which of late years has been notorious for its unhealthiness under the superintendence of Major Ramsay did not exceed 39·6, or say 40 per 1,000, whereas the death-rate in Bengal jails during the year 1884 represented a ratio of upwards of 50 per 1,000." It was also observed that in 18 of the 45 prisons in Bengal, the mortality was above the general average, and that in 7 of these the death-rate varied from 102·2 to 283·4 per 1,000.

Dr. Lethbridge demurs both to the usefulness and fairness of a comparison between Bengal and provinces where the climatic conditions are so absolutely different, and points out that he has to place together the figures of radically diverse districts, such as, for instance, Maimansingh in Eastern Bengal, and Baxár which immediately adjoins the North-Western Provinces. His argument is that, in the vast province of Lower Bengal, there are far greater variations between different districts than exist in other provinces, in respect of salubrity of climate and the general health and sanitary conditions of the population from which the prisoners come. His main conclusions are the following, namely, (1) that the most potent of all causes of mortality is the broken-down constitution of the prisoners admitted to jails in unhealthy districts; (2) that jail mortality is not due to any causes connected with jail life, as is clear from the fact that a very large proportion of the prisoners die within the first six months of their incarceration, and their chances of life improve after that period; (3) that it is a mistake to calculate the death-rate on the daily average number confined in jails. This method is absolutely valueless in the case of jails in unhealthy districts, though it may give approximate results if all the prisoners admitted are uniformly healthy. If a large number of men with broken-down constitutions pass through a jail, a certain number of them will certainly die, and the mortality calculated on the daily average population is in such cases useless as a means of ascertaining the sanitary condition of such jail. Sir Rivers Thompson believes that these conclusions are correct in the main. There cannot, he thinks, be a doubt that the condition of health of the free population must largely influence the death-rate in our jails. At first, it is possible that the conditions attaching to jail life have a depressing effect, and that this is intensified by the sickly state of many of the prisoners when they first come in. But this has nothing to do with jail management, or with the arrangements made to reduce to a minimum the risks incidental to a state of enforced restraint; and the Lieutenant-Governor can only repeat what he said last year, that it is rather to unremitting watchfulness and care on the part of the jail officials in carrying out the various arrangements for the

well-being of the prisoners, than in any further additions to or improvements in the jails, that we must look for a reduction in the mortality.

The following table compares the sickness and mortality among convicted and under-trial prisoners in jails and subsidiary jails since 1876 :—

YEARS.	Daily average number of prisoners.	Daily average sick.	Rate per mille of daily average sick.	NUMBER OF DEATHS.			DEATH-RATES PER MILE OF AVERAGE STRENGTH.			REMARKS.
				From cholera.	From all other causes.	Total number of deaths.	From cholera.	From all other causes.	From all causes.	
1876	21,672	849	39.1	267	975	1,242	12.3	45.0	57.3	
1877	18,709	730	39.0	151	763	914	8.0	40.8	48.8	
1878	18,611	803	43.1	295	1,072	1,287	11.5	57.6	69.1	
1879	18,483	947	51.2	341	1,411	1,752	18.1	76.4	94.5	
1880	17,802	941	52.8	31	1,100	1,131	1.7	61.8	63.5	
1881	16,329	873	52.8	87	1,011	1,098	5.1	61.1	66.2	
1882	15,902	819	51.3	151	933	1,084	9.5	58.6	68.1	
1883	11,776	729	61.3	61	701	762	4.1	59.1	63.2	
1884	11,868	721	60.6	64	678	742	4.1	56.6	60.7	
1885	14,926	773	51.7	167	728	895	10.5	48.7	59.2	Convicted and under-trial only.

The death-rate per 1,000 has risen from 49.7 in 1884 to 59.2 in the year under review. This is largely due to the severe prevalence of cholera in several districts, which alone accounted for 10.3 of the deaths.

The total number of deaths among convicts in jails and subsidiary jails was 838,* or 60.9 per 1,000, as compared with 691, or 50.4 per 1,000, in 1884. Excluding deaths from cholera, the death-rate is reduced to 50.1 per 1,000, as against 46.3 in the previous year. Of those who died, 31.99 per cent. were admitted in indifferent health, and 30.11 in bad health. The death-rate is enhanced by the heavy mortality in the following jails, in some of which cholera accounts for the increase :—

		Death-rates from all causes per mille.	
		1885.	1884.
Jalpáiguri	...	202.0	162.6
Hazáribágh	...	180.8	45.1
Dinagepur	...	170.3	79.7
Rájsháhí, district and central	...	169.5	110.8
Purneah	...	133.1	115.3
Rungpur	...	119.0	283.4
Monghyr	...	111.0	66.3
Bardwán	...	92.7	80.7
Singbhúm	...	90.6	102.2
Bogra	...	83.3	134.5
Champáran	...	81.1	18.9
Chittagong	...	80.3	43.8
Maimansingh...	...	70.8	153.0
Khoolna	...	66.8	16.6
Mámbhúm	...	64.6	11.8
Bhagalpur, district	...	61.5	71.5
Maldah	...	63.6	29.8
Alipur, district and central	...	61.9	51.1
Birbhúm	...	61.2	23.3

Jalpáiguri, Dinagepur, Purneah, Rungpur, Bardwán, Singbhúm, and Bogra are extremely unhealthy districts, and the high rate must be attributed to the unhealthy conditions of the people admitted to the jails, and the prevalence of malarious diseases in the stations in which those jails are situated. As regards Rájsháhí, the jail is, as the Lieutenant-Governor is aware from a personal visit, situated on the banks of the Ganges. It has ample, well-ventilated accommodation, a spacious open compound, and its sanitary arrangements are, so far as can be judged, as good as they can be. But it has the misfortune to receive most of its prisoners from such unhealthy districts as Rungpur, Dinagepur, Jalpáiguri and Bogra. 46.3 per cent. of the prisoners admitted were in indifferent health, and 11.8 in bad health, while there were 17 deaths from cholera during the year. The Khulna jail has been at times overcrowded, and receives its prisoners from some very unhealthy thanas

* Including two cases of suicide.

in the Sunderbuns. Champáran and Maimansingh, in both of which special enquiries have been instituted, are notoriously unhealthy districts, and the high mortality at Hazáribágh was due to a very severe outbreak of cholera. At Monghyr one under-trial prisoner died before he could attend court; one died four days, and another eight days, after conviction; while one man died from injuries due to falling into a well. As regards Jalpáiguri, out of 513 prisoners the medical officer declared 80 to be in bad and 321 in indifferent health. The Inspector-General remarks—"Only those who know the standard of health which is considered good in a malarious district will understand the meaning of such terms as bad and indifferent as applied to Jalpáiguri prisoners. Of the 513 prisoners referred to, 20 died. Of those who died, 8 were admitted in bad health, 11 in indifferent health, and only one in good health."

The remarks of the Inspector-General, referred to above, are borne out by the figures of mortality according to the length of time passed in jail. Out of 836 convicts who died, 364 had been less than six months in jail, 210 more than six months and less than a year, 144 more than a year and less than two years, 45 more than two and less than three years, and 73 above three years. Moreover, the following table shows that prisoners discharged during 1885 had improved in health during their residence in jail:—

	1				2			
	State of health on admission of those who were discharged from the jail as per column 2				State of health on discharge of those who were discharged from the jail.			
	Good.	Indifferent.	Bad.	Total.	Good.	Indifferent.	Bad.	Total.
In 1885	21,651	6,720	2,261	33,632	27,047	4,943	1,642	33,632
Ratio per cent. to total number discharged from the jail ..	73.30	19.97	6.73	100.00	80.13	14.69	4.89	100.00

The year 1885 was an unhealthy one as regards fevers of malarious origin, and the Inspector General ascribes it to the unusual rainfall during the unhealthy months of the year. There was a considerable increase in the admissions from dysentery and diarrhoea—7,764 against 7,061 in 1884—the number of deaths at the same time rising from 271 to 318. There were 21 cases of small-pox with 4 deaths, and 249 cases of cholera with no less than 147 deaths. As these epidemics have been the subject of special reports, it is not necessary to notice them further here. The cases returned under the head "Remittent and continued fevers" showed a decided decrease; but the ratio per mille of deaths to admissions indicates that these cases have been of a severe type, no less than 92.7 per mille dying, as against 39.7 in 1884. A disease has been returned under this head which has been the subject of a special enquiry in the Alipur Jail by a Committee composed of Drs. Cleghorn, Joubert, and Clarke. The report of the Committee, recently received, fully justified its appointment. It has been shown that cerebro-spinal meningitis has prevailed in many parts of India in jails and in emigrant ships without being recognised as a disease distinct from remittent fever, with which it has been confounded. The Committee are of opinion that defective ventilation and the crowding together of large bodies of human beings are the most important hygienic defects which can, in the present state of our knowledge, be said to favour the development of such a disease.

At the Alipur Reformatory School the number of boys on the 1st January 1885 was 105. During the year 27 boys were admitted—19 from the Presidency and Suburban Police Courts and from Howrah, and 8 from mofussil districts, giving a total of 132, or the same number as in 1884. Of these, 17 were released on expiry of sentence, one was released on bail, four were transferred to the school at Hazáribágh, one was retransferred to the Alipore Jail, and one died, leaving 108 boys at the close of the year, of whom 53 were Hindus, 54 Mahomedans, and one native Christian.

The discipline and general behaviour of the boys was satisfactory. The punishments increased from 3.3 in 1884 to 4.7 in 1885, and this is due to the larger average number of boys in the school during the year. The number

of cases in which penal diet was given fell from 131 to 117, and this number might be further reduced without impairing discipline. The fact that 106 boys were locked up in cells as against only 14 in 1884 has attracted the attention of Government, and enquiries are being made as to why it was found necessary to resort so often to this somewhat severe form of punishment. The mark system, under which the boys can each earn an anna per week for good behaviour, attention and industry, continued to work well, and has proved a great stimulant to emulation amongst the boys.

The increase in the number of admissions into hospital from 1.93 in 1884 to 2.91 in 1885 is due to the greater number of boys in the school. The year was exceptionally healthy, and the only boy who died was suffering from chronic dysentery when received from the Presidency Jail.

The cost of maintenance per head fell from Rs. 110-9 in 1884 to Rs. 128-12-4, the decrease being chiefly due to the larger average number of boys during the year 1885. While there was a decrease in expenditure under the heads of construction and repairs and contingencies, there was an increase under the heads of diet, hospital, clothing, and fixed establishment. Diet charges rose from Rs. 2 873 7-9 in 1884 to Rs. 3,567-4-9 in 1885, showing an increase per head of Rs. 2-12-4, and this was due to the higher prices of rations which prevailed during the year. The cost per head for diet in the school (Rs. 33-5-5) as compared with that in the Alipur Jail (Rs. 25-2-3) was excessive; and though the cost of diet per head must of course increase in an inverse ratio to the number of persons to be fed, still enquiries are being made for any special reasons for such a difference. The manufactory operations were well carried out, and the system of education and industrial training continued to be the same as in the previous year.

Reports were received during the year regarding 48 released boys. Of these, 36 are said to be doing well and to bear a good character amongst their neighbours; four boys could not be traced; two were sent to jail for theft, and regarding six the reports were unfavourable. These reports show on the whole that the discipline and training undergone in the institution are productive of satisfactory results.

A want, which had been much felt, was supplied during the year by the purchase of a $3\frac{1}{2}$ horse-power gas engine, and the erection of a gas-holder for storing the gas required to work the engine. The undertaking has been a success, and it will now be possible to undertake work which was hitherto beyond the strength of the boys to perform, and to give instruction to a larger number in "turner's work."

The general result of the school management during the year is satisfactory, and the care and energy with which the Superintendent has, as in preceding years, performed his duties are deserving of commendation.

There were 139 boys in the Hazáribágh Reformatory School on the 1st January 1885. During the year there were 74 new admissions and 12 releases on expiration of sentence, and two under Government orders; four boys died and one escaped, leaving 194 at the close of the year, made up as follows:—

Hindus	158
Mahomedans	32
Santáls	2
Uriyas	2

Seventy-two cells were built during the year, and 42 are under construction; the total number, when completed, will provide accommodation for 232 boys.

The water supply is excellent; a bathing platform has been constructed during the year, and new latrines are being provided. The daily average number of sick rose from 0.88 in 1884 to 4.04 in 1885, the increase being due to the fact that the daily average population increased from 81.5 to 172, and that there was an epidemic of cholera during the year, two out of four deaths being due to that disease.

The number of punishments inflicted increased from 205 to 252—a small increase compared with the increase in the number of boys.

In the Resolution on the Report for 1884, the Lieutenant-Governor remarked that the system of five hours' school work and five hours' industrial

labour each day at Nazáribágh would admit of more relaxation. The Superintendent appears to have reduced the school hours to three and to have increased to seven the number of hours for industrial work, the total number of hours remaining the same. The Lieutenant-Governor is certain that ten hours' application each day to books and labour is too much for growing lads. Only one hour appears to be allowed for play from 2 to 3 p.m.; the two hours deducted from industrial work might with advantage be added to the time for rest and recreation. The Inspector General of Jails has been requested to take steps to assimilate the systems of education in the two schools as far as possible, and the subject will be specially noticed in the Report for the current year.

The cost of diet per head was Rs. 33-4-6, against Rs. 36-8-10 in 1884, thus being almost exactly the same as the cost in the Alípur school. The expenditure on building showed a large increase owing to the construction of the 72 new cells already referred to. The total expenditure under all heads was Rs. 21,798-1-3, as against Rs. 11,930-2-3 in 1884.

The Deputy Superintendent received 76 letters from released boys during the year, and it is stated that, of the boys released since the school was opened, only two have reverted to evil habits.

Civil Justice.

INCLUDING 487 cases instituted during the year, there were 1,331 suits High Court Original Jurisdiction. for disposal on the Original Side of the High Court during 1885, against 1,349 in 1884 and 1,257 in 1883. The number disposed of during 1885 was 878, against 505 in 1884 and 464 in 1883, the proportion of suits disposed of to the total number before the Court being 65·96, against 37·43 in 1884 and 36·91 in 1883. There were 453 suits pending at the close of the year, against 841 in 1884 and 793 in 1883.

The High Court sat on the Appellate Side for 242 days in 1885, against 231 days in 1884 and 228 days in 1883, and disposed of High Court—Appellate Jurisdiction. 7,457 appeals and applications, as compared with 5,048 and 4,391 in 1884 and 1883 respectively, the number pending at the end of the year being 3,267, against 4,983 and 4,858 at the end of 1884 and 1883 respectively. The proportion of work undisposed of in 1885 was 30 per cent. of the whole work on the Appellate Side of the High Court, against 49 per cent in 1884 and 52 per cent. in 1883.

The number of first appeals from original decrees disposed of during the year was 406, of second appeals 1,557, of miscellaneous orders in court 195, and of criminal cases 1,709. The number of first and second appeals and criminal cases amounted to 6,672, against 4,093 in 1884, or an increase of 2,579 cases; and the number of first and second appeals pending at the end of 1885 was 2,840, against 1,561 in 1884, or a decrease of 1,721 cases.

The total numbers of the various descriptions of original civil suits instituted in the courts in the interior during the year are shown in the subjoined statement:—

INSTITUTED IN—		Suits for money	Under the rent law.	Other suits.	Total.
Small Cause Courts	...	56,765	142	258	56,465
Munsifs' ditto	...	179,327	167,836	32,237	379,400
Subordinate Judges' ditto	...	5,314	639	1,129	7,083
District Judges' ditto	...	61	40	563	464
Revenue Courts	5,679	...	5,679
Courts in the Scheduled districts	...	5,799	3,510	3,381	12,690
Total		238,066	177,847	37,368	453,281

The total number of cases under trial and the number disposed of by the various classes of courts are shown below:—

CLASS OF COURTS.		Total of suits for disposal	Total disposed of, counting transfers.
Small Cause Courts	...	63,137	58,214
Munsifs' do.	...	476,781	377,178

Suits for dissolution of partnership ...	98	69	94	.027	.018	.024
Suits under section 261, Act X of 1865 ...	184	188	208	.051	.050	.054
Other suits not falling under any of the previous heads ...	457	350	338	.127	.094	.089
Total ...	357,455	369,661	378,698

The following statement shows the suits instituted in Civil Courts (including the courts in the Scheduled districts) classified according to value:—

	Rs.		No.
Not exceeding 10	91,756
Ditto 50	219,178
Ditto 100	73,390
Ditto 500	52,813
Ditto 1,000	4,978
Ditto 5,000	3,757
Ditto 10,000	385
Ditto 1,00,000	285
Exceeding 1,00,000	20

There were in addition 512 suits the value of which cannot be estimated in money.

The following statement shows the results of decrees put in execution by the regular Civil Courts during the past two years:—

YEAR.	Decrees executed.		Amount realised.
	Completely.	Partially.	
1884 ...	78,040	49,647	Rs. 1,48,08,324
1885 ...	77,618	52,414	1,42,75,792

The number of suits instituted in the Calcutta Court of Small Causes during the past three years is shown below:—

	Number of suits instituted.	
1883	26,027
1884	31,074
1885	30,644

Details of the value of the suits instituted in 1884 and 1885 are given below:—

	Rs.				1884.	1885.
Up to	10	10,411	10,033
"	50	13,159	13,275
"	100	3,177	3,142
"	500	3,402	3,360
"	1,000	546	501
Above	1,000	379	333
Total					31,074	30,644

The figures show a decrease of 430 as compared with the institutions in 1884. This number should, however, be reduced by 151, being the number of applications under Chapter VII of the Presidency Small Cause Courts' Act, 1882, which were in 1884 registered as regular suits, but are now, in accordance with the orders of the High Court, entered under the head "Miscellaneous cases." The decrease, which occurred under all the heads of value with one exception, calls for no particular remark. The following table gives the number and description of suits instituted during the years 1884 and 1885:—

				1884.	1885.
Contract in writing	5,406	6,024
Contract not in writing	3,217	2,638
On account stated	1,520	1,723
Money had and received	642	813
Goods sold	11,893	10,890
Wages, work and materials	4,011	4,228
Rent not falling under the Rent Law	3,100	3,427
Moveable property or value thereof	361	368
Damages	465	336
Other suits for money or moveables not already mentioned	549	197
Total				31,074	30,644

The amount in litigation during the year was Rs. 21,41,108, as compared with Rs. 22,47,816 in 1884.

The total number of cases for disposal in 1885 amounted to 33,666, of which 2,664 were cases pending from the previous year. Of these, 30,373 were disposed of and two were transferred to the High Court, leaving 3,291 cases pending at the close of the year. There were 1,513 cases disposed of in 1885 under the Dstraint Act of 1875, against 806 cases in 1884 and 461 cases in 1883.

The following statement shows the results of the suits of the past three years:—

How DISPOSED OF.	1883.	1884.	1885.
For plaintiff after trial or reference to arbitration	3,859	4,076	4,003
Ditto <i>ex parte</i> or on confession	7,178	9,459	10,273
Compromised	9,599	11,492	10,796
Non-suited	*920	*816	*743
Dismissed after trial or uncontested	1,413	1,382	1,275
Ditto on default of plaintiff	2,514	4,817	3,283
Total	25,783	30,211	30,373

* These cases were all withdrawn with leave.

The percentage of the cases in which the result was in favour of the plaintiff during the three years referred to are given below:—

1883	81.2
1884	82.8
1885	82.5

The gross receipts during the year amounted to Rs. 3,08,321 and the expenditure to Rs. 2,08,892, against Rs. 3,24,516 and Rs. 2,11,940 respectively

in the preceding year. The net amount credited to the general revenues was Rs. 99,429, against Rs. 1,12,576 in 1884.

The following statement shows the number of suits instituted and disposed of in the mofussil Courts of Small Causes during the last three years, omitting cases not tried under the summary procedure of the courts:—

CASES.				1883.	1884.	1885.	Increase since 1884.
Instituted	50,202	53,887	56,214	2,327
Disposed of	51,109	53,961	57,423	3,462

The increase in the number of cases instituted was most marked in the following groups of courts:—

				Increase.
Magoorah, Jenidah, and Narail	1,091
Hugli, Serampur, and Howrah	910

There has also been a steady increase in the work before the courts at Sealdah Jessor, and Kooshtea. Except where the Munsifs have been vested with special powers to try the suits of small values and have thus withdrawn cases which would otherwise have come before the Courts of Small Causes, the returns of such courts show no material variation.

Appellate Courts.

The following statement shows the work done by the appellate courts during 1885:—

COURTS IN THE INTERIOR.				Total number of appeals for decision.	Total number of appeals disposed of omitting transfers.
Appeals from decrees—					
Sub-Judges' courts	18,976	13,913

Rent " ...	2,805	2,451	2,357	2,863	2,185	2,345	457	703	715
Title " ...	508	791	665	418	738	727	106	139	97
Total ...	20,252	19,813	17,683	19,942	18,835	18,169	2,771	3,748	3,262

During the year 1885 there was a decrease in institutions under every head except title suits. The decrease was most marked in civil suits, the number of which fell from 6,665 in 1884 to 5,258 in 1885. The total number of cases disposed of during 1885 was 18,169, as compared with 18,835 in 1884, while at the end of the year there were 3,262 cases pending, as against 3,748 at the end of the preceding year.

There were 11 appeals to the High Court during the year. The number of appeals against the orders of subordinate courts in the district fell from 836 to 729, of which 395 were to sub-divisional officers and 334 to the Deputy Commissioner. The receipts of the courts increased from Rs. 72,901 to Rs. 73,906 in 1885.

There were two appeals pending in the Privy Council at the close of the year 1884-85, to both of which Government was a party. Four more appeals were preferred during the year 1885-86. Out of these appeals one was disposed of, and the remaining five were still pending at the close of the year.

The following statement shows the result of Government litigation in all the civil courts of Bengal during the year 1885-86 as compared with the two previous years:—

		1883-84.	1884-85.	1885-86.
CASES.				
<i>Before the High Court.</i>				
Appeals	Decided in favour of Government	17	24	28
	Ditto against Government	1	1	1
	Compromised, remanded, or withdrawn	4	4	305
	Total	22	29	337
<i>Before the Lower Courts.</i>				
Appeals	Decided in favour of Government	96	111	29
	Ditto against Government	3	8	17
	Compromised, remanded, or withdrawn	5	8
	Total	104	127	46
Original cases	Decided in favour of Government	271	313	519
	Ditto against Government	33	139	71
	Compromised, remanded, or withdrawn	23	90	35
	Total	330	542	625
Total	Decided in favour of Government	387	448	576
	Ditto against Government	37	148	92
	Compromised, remanded, or withdrawn	32	102	340
	Total	456	698	1,008

The percentage of cases decided in favour of Government increased from 75 to 86 $\frac{1}{4}$.

Taking the litigation in the High Court only, the percentage of cases decided in favour of Government decreased from 96 to 87 $\frac{1}{2}$. Of the 305 appeals shown as compromised, remanded or withdrawn, 169 from Tirhút and 133 from Midnapur were suits by ryots of Government estates objecting to the enhanced

assessment of rent fixed by Government. All these suits were decided in favour of Government by the lower courts. The Midnapur cases were sent back for retrial, and the Tírhút cases were withdrawn at the suggestion of the Advocate General.

The result of Government litigation in the lower appellate courts was more unfavourable, the percentage of cases decided in favour of Government being 63 per cent. only, as against 93 in the previous year. In the courts of first instance, the percentage of cases decided in favour of Government was 88, against 69 in the preceding year. Out of the 71 cases decided adversely to Government, no less than 43 were cases under the Land Acquisition Act, in which the courts gave the claimants a little more than the amounts tendered by the Collectors as compensation.

The total value of the cases in which decisions were given adverse to Government fell from Rs. 6,19,974 to Rs. 4,78,645. Of this amount, Rs. 13,305 composed the value of the suits in the High Court, Rs. 3,106 the value of suits in zillah appeals, and the balance that of original suits. In original suits decided adversely to Government the value of suits to obtain possession of land, estates or other property, or for the recovery of rents or debt bonds, was Rs. 1,00,386; of land acquisition suits, Rs. 2,15,001; and of suits for the reversal of revenue sales on the plea of informality, non-liability, &c., Rs. 1,41,250.

The result of the litigation in which the Court of Wards was interested during the year 1885-86, as compared with that of the two preceding years, was as follows:—

	1883-84.	1884-85.	1885-86.
Decided in favour of Court of Wards ...	763	700	1,113
Ditto against Court of Wards ...	99	121	158
Compromised, remanded or withdrawn ...	70	56	44
Percentage in favour of Court of Wards ...	88½	85½	87½

The increase in the number of cases was due to the fact that the Bardwán Raj, the Dighaputy estates, and the Tikari estate in Gya have come under the Court of Wards.

The amount of decrees in favour of Government under realisation during the year was Rs. 6,26,182, against Rs. 6,42,647 in 1884-85. The amount realised again fell from Rs. 20,407 to Rs. 12,338, and the percentage of recovery from 3½ to 2 per cent. Omitting the Canning decrees, amounting to Rs. 5,81,279, which were remitted during the year, the amount under realisation was Rs. 44,903, so that the percentage of recovery would amount to 27½. The largest outstanding balances were in Bānkura, Rs. 4,585; in Farídpur, Rs. 3,515; in Maldah, Rs. 9,607; and in Midnapur, Rs. 2,404.

In wards' decrees the amount under realisation increased from Rs. 5,72,757 to Rs. 9,37,524, and the amount realised from Rs. 1,02,253 to Rs. 1,69,179. The percentage of recovery, however, fell from 19½ to 18 per cent. With the exception of the Tikari estate, not a pice was recovered out of the outstanding decrees of wards' estates in any of the districts of the Patna Division. The heaviest balances were—in Húglí, Rs. 26,035; in Bardwán, Rs. 2,65,145; in Midnapur, Rs. 25,935; in Jessor, Rs. 25,215; in Murshedábád, Rs. 14,626; in Rájsháhí, Rs. 72,423; in Durbhunga, Rs. 52,716; in Purneah, Rs. 61,848; and in Lohárdagá, Rs. 47,578.

Registration.

THE following table shows the number of registration offices open in each year since 1870-71, with the number of registrations effected, and the receipts and expenditure of the department:—

YEARS.	NUMBER OF REGISTRATIONS.				Total receipts.	Total expenditure.	Surplus.	Number of registration offices.	
	Affecting immoveable property.		Other registrations.	Total.					
	Compulsory.	Optional.

Increase	...	11,302	17,573	6,646	35,521	13,676	11,255	...	2
Decrease	579

In the year 1885-86 there was an increase in the number of registrations under all heads over the number shown in 1884-85, while the excess of receipts over expenditure is only Rs. 579 less than in the previous year. Compulsory registrations affecting immoveable property increased by 3.01 per cent., optional registrations of the same kind by 9.06 per cent., and “other registrations” by 5.54 per cent.

Registrations of all classes.

The following table shows the registrations of different classes during the year as compared with 1884-85:—

	(A).—Compulsory.		1884-85.	1885-86.
Registrations affecting immoveable property.	Instruments of sale, &c., of immoveable property of value of Rs. 100 and upwards		47,027	47,165
	Instruments of mortgage of immoveable property of value of Rs. 100 and upwards		55,253	58,824
	Perpetual leases		85,519	87,236
	Term leases under section 17		175,045	180,939
	Other compulsory registrations		11,886	11,868
	Total compulsory registrations affecting immoveable property		374,730	386,032
	(B).—Optional.			
	Instruments of sale, &c., of immoveable property of value less than Rs. 100		115,540	120,381
	Instruments of mortgage of immoveable property of value less than Rs. 100		66,416	77,638
	Leases for one year and less		5,363	6,100
	Miscellaneous documents		6,492	7,265
	Total optional registrations affecting immoveable property		193,811	211,381
	Total registrations affecting immoveable property		568,541	597,416

		(D.)				
		Number of wills registered	1,783	1,749	
		Ditto of written authorities	41	37	
Total registrations				<u>688,380</u>	<u>723,901</u>

There has been, almost without exception, a general and steady increase. The operation of section 54 of the Transfer of Property Act, 1882, and the Full Bench decision of the Calcutta High Court reported in I. L. R., 8 Cal., 597, have virtually abolished the distinction created by sections 17 and 18 of the Registration Act between compulsory and optional registration of documents affecting transfers of immoveable property even when the value is under Rs. 100; for, if delivery is not given, section 54 makes registration compulsory, and if delivery is given, a registered instrument of transfer is not required. Moreover, the provisions of the Bengal Tenancy Act (VIII of 1885) will have the same effect as regards deeds relating to the transfers of permanent tenures. The Government of India have accordingly been asked to modify the existing forms of Statistical Statements II and IV. The increase in the number of deeds of mortgage of value less than Rs. 100 was very large, being 16·89 per cent more than the previous year. The number of leases for terms of one year and less exceeded the number registered in the preceding year by 13·74 per cent. Of the total registrations, amounting to 723,901, the number relating to immoveable property was, as shown above, 597,416, or 82·52 per cent. of the whole. A marked feature of the year's operations was the number of optional registrations, amounting to 337,869, or 46·67 of the whole number. Compared with the figures for the preceding year, optional registrations increased by 7·72 per cent., while compulsory registrations increased by only 3·01 per cent.

Leases.

The total number of leases registered during the past four years has been as follows:—

CLASS OF LEASE.	1882-83.	1883-84.	1884-85.	1885-86.
Perpetual leases (compulsory) ...	70,764	75,552	85,519	87,236
Leases for terms of years (compulsory) ...	141,156	154,571	175,045	180,939
Leases for one year or less (optional) ...	4,531	4,952	5,363	6,100

Of the perpetual leases registered in 1885-86, 84,389 were registered in Bengal, only 1,343 in Behar, 1,399 in Chutiá Nágpur, and 105 in Orissa. As many as 69,775 were registered in the seven districts of Chittagoug (23,472), Bákarganj (10,969) Jessor, Noakholly, Farídpur, 24-Pergunnahs, and Khulna (4,701). These districts in respect of this particular item of registration occupy precisely the same relative position as they did in 1884-85.

Perpetual leases.

Term leases.

The number of term leases registered in Bengal Proper was 136,258, against 127,607 in 1884-85, the figures for the whole province being 180,939, against 175,045. In five districts the number of such leases exceeded 10,000, namely, Jessor with 17,248 registrations, Bákarganj with 13,516, Farídpur with 12,819, Tipperah with 10,956, and the 24-Pergunnahs with 10,636. There was an increase of over 1,000 registrations in each of the four districts of Bákarganj, Khulna, Noakholly, and Jessor, while the numbers in Muzafferpur fell from 6,212 to 4,819, and in Maldah from 2,026 to 970. The increase in Bákarganj is partly due to the resettlement of some large estates; in Khulna to the new settlement of jungle lands bordering on the Sunderbuns; in Jessor to the Tenancy Act, under which tenants can now only sublet for a term of years. In Muzafferpur bad crops in 1884-85 and disputes between indigo factories caused many term-leases to be registered

whereas the same causes did not exist in the year under report. In Maldah the decrease is attributed to the settlement of several pergunnahs having been temporarily stopped by their zemindars. 6,100 leases for one year or less were registered, as against 5,363 in 1884-85. The total value of leases of all kinds registered during the year was Rs. 92,99,354, against Rs. 1,00,86,412 in the preceding year. But the number of leases increased from 154,275 to 161,932. Of this number, 75.43 per cent. were for amounts not exceeding Rs. 25. As in 1884-85, Behar took the first place as regards registration of deeds of large values, the average value for each lease being Rs. 119.55, against Rs. 39.86 in Bengal.

The total number of leases, excluding perpetual leases, amounted to 46,612, and of counterparts to 140,274, the percentage of leases being only 24.92, as compared with 26.83 in 1884-85. Thus, only two leases are registered for every five counterparts. The highest percentage was in Champáran, where the leases registered amounted to 91.87 per cent., and in eleven other districts the ratio exceeded 50 per cent., namely, in Lohárdága, Muzafferpur, Gya, Patna, Sarun, Santál Pergunnahs, Calcutta, Singbhúm, Dárjiling, Sháhábád, and Mánbhúm. In five districts, Cuttack, Purneah, Rájsháhí, Maimansingh, and Bogra, the ratio was less than 10 per cent. Various reasons are assigned for the smaller percentage of leases, such as the fact that the ryot has to pay the cost of both documents, the unwillingness of the zemindars to bind themselves in writing, their unwillingness to attend at registration offices, and their wish to prevent the ryot from using the lease as a valuable security for the purpose of raising money.

Registrations of deeds of sale of immoveable property of the value of Rs. 100 and upwards showed a small increase of 0.29 per cent., while deeds of mortgage of the same kind showed an increase of 6.16 per cent.

It is noticeable that in those districts in which a large number of sales of immoveable property of Rs. 100 and upwards in value was registered, a large number of mortgages of property of a similar class and value was also registered.

Registrations of deeds of sale of immoveable property of less than Rs. 100 in value increased from 115,540 to 120,381. The most marked increases were in Tipperah, Chittagong, Pabná, and the 24-Pergunnahs. The

increase is probably due to a greater appreciation of the benefits of registration rather than to pressing necessity or agricultural depression. Registrations of instruments of mortgage of the same class increased by 16.89 per cent. The highest increase was in Chittagong, which is attributed to the people having become aware that the Transfer of Property Act requires the registration of all such deeds, even though the property be less than Rs. 100 in value.

The following statement shows the number of estates and tenures transferred by registered deeds, and the classes of persons by whom they were purchased :—

	Extra revenue-paying estates.		Share in entire revenue-paying estates.		Revenue-free properties.		Intermediate tenures.		Others.	
	1881-85.	1885-86.	1881-85.	1885-86.	1881-85.	1885-86.	1881-85.	1885-86.	1881-85.	1885-86.
Number of transactions	1,344	1,313	11,701	11,254	27,569	27,177	29,415	29,885	9,903	13,320
<i>Purchasers.</i>										
1. Mahajans, traders, or money-lenders	238	216	1,317	1,404	4,976	4,229	2,593	2,255	1,370	1,615
2. Zemindars	357	354	7,307	6,229	2,127	2,076	1,959	1,550	993	1,239
3. Intermediate tenure-holders	984	511	2,675	2,779	3,298	3,693	15,800	16,032	1,873	1,900
4. Ryots	122	240	1,573	1,567	10,130	10,089	9,227	8,629	2,692	3,749
5. Others	603	792	1,321	1,397	8,843	8,810	5,168	5,770	3,691	4,195
Purchase-money Rs.	39,10,314	48,88,713	1,01,44,187	93,56,010	34,28,819	39,04,919	53,77,646	51,30,658	94,57, 25	59,16,733

From this statement it appears that of the classes specified, the most numerous purchasers in the case of entire revenue-paying estates were those classified as "others," excluding mahajans, traders, money-lenders, zemindars,

intermediate tenureholders, and ryots. Zemindars were the largest buyers of shares in such estates ; ryots in the case of revenue-free properties ; and small talukdars and tenureholders in the case of intermediate tenures. Revenue-free properties are evidently keenly sought after ; the ryot purchasers numbered 10,089, while the zemindars, talukdars, and mahajans put together amounted to only 9,008. The figures show clearly that the agricultural classes are not parting with their interests in the soil, and that mahajan and money-lending purchasers are not so numerous as is sometimes alleged. The total number of purchasers of the latter class amounted to 9,739, while the zemindar, tenureholder, and ryot purchasers amounted to 60,677.

The following statement shows the number and classes of purchasers of ryotti holdings at fixed rates during the past two years :—

YEAR.			Transactions.	PURCHASERS.					
				Mahajans, traders, or money-lenders.	Landlords of holdings transferred.	Other landlords.	Ryots.	Others.	Total purchasers.
1884-85	24,327	4,156	781	2,134	13,012	5,931	26,014
1885-86	26,479	4,386	843	2,124	11,085	6,910	28,678

The ryots are about one-half of the total number of purchasers. The total purchase-money increased from Rs 22,83,331 to Rs. 23,35,666, giving an average of 10 years' purchase, against 11·2 in the previous year. The purchasers of ryotti holdings with rights of occupancy were as follows:—

	1884-85.	1885-86.
1. Mahajans, traders or money-lenders	6,846	6,725
2. Landlords of the holdings transferred	1,060	1,186
3. Other landlords	2,685	3,153
4. Ryots	39,436	38,919
5. Others, including those unspecified	7,515	8,802
Total	57,542	58,787

The average number of years' purchase shows an advance from 9·9 to 10·2. The ryots amounted to a little less than two-thirds of the total number of purchasers. Transfers were most numerous in Tipperah (8,267), Midnapur (5,337), Rungpur (5,002), and Bardwán (3,143); and in the following districts they exceeded 2,000, namely, Dinagepur, Dacca, Bírblhúm, Maimansingh, Húglí, and Farídpur. Having regard to the discussions on the subject during the passing of the Tenancy Act, the fact seems clear from the above statements that in most districts of Bengal Proper the transferability of rights of occupancy is customary and common.

Out of 124,699 instruments relating to moveable property, which were registered during 1885-86, 89,501, or 71·77 per cent., were money bonds; the ratio in the previous year was 72·41 per cent. As many as 30,533, or more than one-third of the whole, were registered in Jessor alone. Nothing new is said regarding this enormous registration of bonds in Jessor, which, though less by 125 than the number registered in the previous year, is nearly four times as large as that of the 24-Pergunnahs, the district in which the next largest number of bonds were registered. In former years it has been attributed to the high price of food-grains and to the fact that the completion of the railway works, which used to provide employment for the poor class of people, has compelled many to borrow money. These causes are not peculiar to Jessor, and are not by themselves sufficient to account for the extraordinarily large number. Indebtedness may be a cause for increase of bonds in some districts ; but the increase is equally evident in districts that are undoubtedly prosperous. It is said that in Midnapur the traders frequently mortgage their homesteads in order to have more money to invest in business. The more frequent registration of bonds is doubtless to a great extent due to the increasing facilities for

registration afforded by the establishment of new rural sub-registry offices. Of the total number of bonds, 21,139 were for amounts not exceeding Rs. 25, 28,907 for sums between Rs. 26 and Rs. 50, and 21,825 for sums between Rs. 51 and Rs. 100.

The number of commissions issued fell from 2,902 to 2,668, and of visits paid from 3,261 to 3,120. Registration was refused in 3,639 cases, against 3,391 in 1884-85. Out of 445 appeals under sections 72 and 73, registration was ordered in 228 cases. The number of prosecutions under the Registration Act was 78, as compared with 54 in the preceding year. Of 136 persons against whom criminal proceedings were taken, 63 were prosecuted for false statements, 46 for false personation, and 6 for forgery. Forty-seven persons were acquitted, 75 were convicted, and 14 were awaiting trial at the close of the year. The largest number of prosecutions in any one district was 9 in Faridpur, 4 being the highest number in any other district.

The number of applications for search or copy amounted to 59,987, as against 56,976 in 1884-85 and 52,218 in 1883-84. Searches. The number of ordinary searches was 23,787, and the fees realised Rs. 28,189-4. Searches made under the High Court Rules amounted to 36,200, and the fees realised Rs. 67,118-12.

The number of documents impounded was 2,192, against 2,225 in the preceding year. The Collector upheld the action of the registering officers in 1,680 cases, in 317 cases the documents were held to be correctly stamped, and prosecutions were instituted in 104 cases. The number of deeds discredited by civil courts was 62, as against 70 in the preceding year.

There was an increase in the number of operations under the Act in 27 districts, and a decrease in 18 districts. The highest actual increase was 6,116 in Chittagong, and the largest decrease 2,788 in Muzafferpur. The following table shows the number of registrations and the fees realised in each of the different divisions of the province :—

DIVISION.				Registrations.	Total fees realised.	Percentage of registrations on the whole.
					Rs.	
Presidency	178,009	2,65,339	21.6
Dacca	125,438	1,81,121	17.33
Chittagong	115,818	1,25,382	16
Pardwán	112,195	1,55,438	15.49
Patna	74,626	1,71,063	10.31
Rájsháhí	44,579	66,309	6.16
Bhugulpur	43,297	69,281	5.98
Orissa	15,704	24,638	2.16
Chutiá Nágpur	14,325	22,594	1.97
Total				723,901	10,81,168*	100.00

* Exclusive of receipts of the Registrar of Joint-Stock Companies and the office of the Inspector-General of Registration. The total expenditure was Rs. 5,00,979.

The total increase in the number of operations was 5.16 per cent. on the operations of the preceding year. In every district there was a profit to Government after all the expenses in connection with the working of the Act had been defrayed. The total net surplus was Rs. 5,80,488-15-11, against Rs. 5,20,391 in 1884-85; or, after deducting all charges on account of stationery, printing, printed forms and registers, iron record-racks and buildings, Rs. 4,50,651-2-2.

The number of registration offices open at the close of the year was 292, against 290 at the close of 1884-85. Three new rural sub-registry offices were opened during the year—at Pipli in Purí, at Poopri in Muzafferpur, and at Daudkandi in Tipperah. Twenty-six sub-registry offices at

sub-divisional head-quarters were converted into rural offices during the year, and 12 more since the close of the year. This relief of sub-divisional officers from registration work was very much required: 905 inspections of registration offices were made, as compared with 809 in 1884-85. The small number of inspections (21) made by the Inspector-General was the unavoidable result of his illness; but the total number of inspections made by the first and second Inspectors increased from 257 to 284. The increase from 64 to 102 in the number of inspections of Sudder Sub-Registrars is also satisfactory. The number of stamp inspections was 255, against 428 in 1884-85.

Operations under the Mahomedan Marriage Registration Act.—Statistics from the year 1877-78 are given in the following table:—

YEAR	Number of districts in which the Act was in force.	Number of offices open on the 31st March.	Number of marriages registered.	Number of divorces other than <i>khulas</i> registered.	Number of <i>khulas</i> registered.	Total number of ceremonies registered.
1877-78	14	103	7,391	1,404	595	9,390
1878-79	14	103	8,161	1,705	771	10,637
1879-80	14	107	7,137	2,097	623	9,857
1880-81	14	106	5,777	1,874	779	8,430
1881-82	14	107	4,951	2,239	667	7,857
1882-83	14	112	5,068	2,247	766	8,081
1883-84	14	112	4,273	2,315	895	7,483
1884-85	14	112	3,913	2,540	957	7,410
1885-86	14	112	3,993	2,422	1,109	7,524

The total number of ceremonies registered was slightly more than in the previous year. Chittagong, as usual, shows the largest number (2,895), while Dacca comes next with 819 and Rungpur with 803, as against only 535 in the previous year. Maimansingh has 621, while Rájsháhí shows a decrease from 844 to 505. Rungpur and Rájsháhí have thus changed places, but no reason is assigned for the variation. In no other district did the number of registrations amount to 400, while in Pabná and Nadiyá the numbers were only 22 and 8 respectively. The Officiating Inspector-General remarked that "no practical advance has been made so far as registration under the Act is concerned, and people do not appear to have come to appreciate the Act any more than they did in former years. It was thought that the appointment of Qazis under the Qazis' Act, XII of 1880, would have the effect of increasing the number of registrations; but so far this would not appear to be the case." It is not stated whether any particular effect has been produced by the alterations in the rules and procedure under Act I (B.C.) of 1876, to which reference was made in the Resolution on the Report of the working of the Act for 1883-84.

Fourteen new companies with an aggregate nominal capital of Rs. 41,26,600 were registered during the year, against 16 companies with an aggregate nominal capital of Rs. 51,46,000 registered in 1884-85. Of these, ten are Tea Companies with an aggregate capital of Rs. 18,46,600, two Trading Companies with capital of Rs. 12,20,000, one Insurance Company with capital of Rs. 10,00,000, and one Indigo Company with capital of Rs. 60,000.

Four companies increased their capital. Their original aggregate capital was Rs. 60,80,000, and the increase amounted to Rs. 27,60,000, of which Rs. 25,00,000 is accounted for by the Indian General Steam Navigation Company, Limited, which increased its capital from Rs. 55,00,000 to Rs. 80,00,000.

Out of 23 companies under liquidation, 15 with an aggregate nominal capital of Rs. 1,01,11,000 commenced winding up during the year. Of these, 7 were Tea Companies, 7 Trading Companies, and one Pressing Company. The Great Eastern Hotel Wine and General Purveying Company, Limited, liquidated on the 28th January last, and re-appeared under the same name and with the same capital on the 4th February following, *i.e.* within a week after its liquidation. The remaining eight companies that went under liquidation in previous years were finally wound up last year.

The total number of companies working in Bengal at the close of last year was 231.

The Manager of the Indian Pressing Company, Limited, was prosecuted under section 64 for not filing notice of the situation of the Company's office. The case was tried by the Presidency Magistrate, Calcutta, who discharged the Manager with a warning.

The total receipts from all sources aggregated Rs. 6,995, against Rs. 7,089-6 in the previous year, showing a decrease of Rs. 94-6, while the total expenditure amounted to Rs. 588, which is chiefly made up of the salary of the establishment of the Registrar of Joint-Stock Companies, consisting of a clerk on Rs. 40 rising to Rs. 50, and a peon on Rs. 7 a month.

Municipal Administration.

THE fourth general election of Commissioners, held under the Calcutta Municipal Act IV (B.C.) of 1876, took place on the 15th December 1885, the term of office of the previous body of Commissioners having expired in October 1885. 14,979 persons applied for enlistment as voters, against 15,386 in 1882; 9,548 persons were eventually registered, against 10,587 in 1882; and 8,975 persons actually exercised their right of voting, against 9,180 in 1882. The applicants for registration showed a falling off of 407 as compared with the number of applicants in 1882, and the number of persons who actually voted was 205 less than in 1882. The number registered as qualified showed a falling off of 1,039, or over 10 per cent. This decrease is said to be due to the more rigid scrutiny exercised in examining claims.

Twenty-nine general meetings were held by the Commissioners during the year, of which 12 were special general meetings, three were quarterly, and six were special meetings. Of standing Committees there were 103 meetings, and of special Committees 36 meetings. The Town Council met 46 times, the Water-supply Extension Committee 10 times, the Bustee and Tank Committee 19 times, the Market Committee 11 times, and the Town Improvement Committee only once.

The Town Council dealt, as usual, with a large number of matters of various degrees of importance. Among others were the codification and remodelling of the rules and regulations for house drainage, the drainage works for Hastings and Baug Bazar, the opening of the municipal latrines to the public free of charge, the provision of roads in the Kurbulla Tank locality, the appointment of a whole-time Health Officer, the erection of slaughter-houses for the supply of meat for Hindus, the examination of candidates for appointment in the Municipal office, and the leasing of the Kotrung brickfields.

At the end of 1884-85 the total debt of the Corporation amounted to—

Municipal loans.

	Rs.
Debenture loans	71,65,800
Consolidated loan from Government ..	69,43,213
Temporary ditto ditto ...	5,00,000
Total ...	1,46,09,013

Against the debenture loans the Commissioners had a reserve fund of the nominal value of Rs. 4,38,845. During the year they borrowed Rs. 25,00,000 by debentures bearing interest at 5 per cent., viz. Rs. 12,00,000 for the extension of water-supply, Rs. 5,00,000 for the repayment of the temporary loan from Government, and Rs. 8,00,000 for the extension of drainage works and repayment of the loan of 1865. The year closed with a loan liability of Rs. 1,56,41,972.

The following statement compares the income of the municipality under the three ordinary revenue funds during 1884-85 and 1885-86:—

Income.				1884-85.	1885-86.
				Rs.	Rs.
<i>General Fund—</i>					
House-rate	9,99,552	10,30,387
Taxes	4,09,170	3,93,410
Fees	4,923	6,038
Fines and penalties	25,022	30,375
Road department receipts	43,134	43,544
Street watering d.	40
Conservancy do.	40,163	37,580
Municipal railway do.	296	1,543
New drainage do.	9,277	6,257
Night-soil department	2,18,318	2,15,327
Slaughter-house do.	40,395	39,835
Municipal Market do.	1,27,920	1,40,841
Hospital and vaccination fees	1,097	598
Rent	22,534	31,074
Miscellaneous	13,066	22,952
Total				19,54,907	19,99,761
<i>Water-rate Fund—</i>					
Water-rate	4,15,440	4,27,515
Sale of water	95,755	87,121
Water-supply miscellaneous receipts	2,132	2,511
Total				5,13,627	5,17,147
<i>Lighting-rate Fund</i>				2,55,438	2,60,955
Grand Total				27,23,972	27,77,883

The receipts of the general fund were Rs. 44,854 in excess of those of the previous year. This is principally due to a general increase in the valuation of the town. In the Water-rate Fund the receipts exceeded those of the previous year by Rs. 3,520. The receipts of the Lighting-rate Fund exceeded those of the previous year by Rs. 5,517. The total income of the municipality under these heads was better by Rs. 53,891 than in the preceding year.

The following table shows the expenditure of the municipality from the three ordinary revenue funds during the period under review as compared with the actuals of the previous year:—

Expenditure.				1884-85.	1885-86.
				Rs.	Rs.
<i>General Fund—</i>					
Interest on loans	5,60,121	4,36,576
Contribution to sinking fund and repayment of loans	2,39,380	1,65,532
Establishment	2,67,225	1,96,750
Cost of collection	31,370	32,320
General expenditure	60,430	64,823
Road Department expenditure	2,66,995	3,03,154
Street watering	52,725	53,392
Gowkhannah charges	1,15,703	1,12,492
Conservancy charges of the town	99,948	1,04,789
Municipal railway	49,195	91,383
Drainage pumping station	29,560	29,985
Salt-water Lakes	22,764	17,984
House drainage	7,237	8,529
Burning ghât charges	1,837	349
Night-soil department	1,93,258	2,06,262
Slaughter-house	10,334	10,449
Municipal markets	21,849	23,928
Hospital and vaccination	35,417	38,773
Town Hall	21,280	5,525
Bustee improvements	1,18,863	1,17,673
Miscellaneous	44,533	33,393
Total				21,93,023	20,54,061

	1884-85.	1885-86.
	Rs.	Rs.
<i>Water-rate Fund—</i>		
Interest on loans	2,06,319	2,95,619
Contribution to sinking fund and repayment of loans	1,04,995	1,15,588
Establishment	86,413	88,472
Cost of collection	6,414	6,783
General expenditure	12,516	14,671
Working expenses	96,923	1,09,519
Charges for supply of water to shipping, &c.	16,123	13,402
Total	<u>5,29,703</u>	<u>6,44,054</u>
<i>Lighting-rate Fund—</i>		
Lighting lamps	2,58,237	2,44,892
Supervision and contingencies... ..	5,198	13,316
Cost of collection	3,626	3,790
Cost of new lamps	7,334	5,171
Total	<u>2,74,395</u>	<u>2,67,199</u>
Grand Total	<u>29,97,121</u>	<u>29,65,314</u>

The expenditure of the General Fund exceeded the receipts of the year by Rs. 54,300, thereby reducing the opening balance from Rs. 3,40,478 to Rs. 2,86,178. The expenditure of the Water-rate Fund exceeded the receipts by Rs. 1,26,907. This is due to the charges on account of the extension works, and will be permanent. The rate has therefore been raised from $3\frac{1}{4}$ per cent. to 5 per cent. from the beginning of the current year. The expenditure from the Lighting-rate Fund showed a small excess of Rs. 6,244 over the receipts of the year.

There are certain special funds not included in the above statements. The receipts of the *Police-rate Fund* during the year amounted to Rs. 2,93,551, and the disbursements made to the Commissioner of Police amounted to Rs. 2,95,077. Including the opening balance of Rs. 26,790, there remained a sum of Rs. 25,264 in hand at the close of the year. This rate has been reduced to 2 per cent. from the current year. The receipts of the *Jute Warehouse Fund* amounted to Rs. 22,501, 80 per cent. of which, Rs. 18,001, together with an unpaid balance of Rs. 120 on account of the previous year, was paid to the Commissioner of Police for maintenance of the fire-brigade. After meeting inspection charges, there was a surplus of Rs. 1,933, which was credited to the General Fund. The *Hackney Carriage Registration Fund* had an opening balance of Rs. 12,618: the receipts during the year were Rs. 17,913, and the expenditure on account of establishment and contingent charges amounted to Rs. 5,508. The *Cart Registration Fund* had a balance of Rs. 8,662 at the beginning of the year: the receipts during the year amounted to Rs. 70,428, and expenditure to Rs. 4,848. The *Marcus Legacy Fund* had at the commencement of the year a cash balance of Rs. 4,275 and Government securities of Rs. 70,000. The securities were sold and re-invested in 5 per cent. municipal debentures.

The gross demand made by the Bill Department amounted to Rs. 23,37,310, against Rs. 22,59,683 in 1884-85. The outstanding balance on 31st March 1886 was Rs. 62,313, as compared with Rs. 63,545 in the previous year. It is stated that this outstanding balance would have been reduced to Rs. 21,901 had not bills to the amount of Rs. 40,412 been returned by the Collector and the Warrant Officer a few days before the end of the last quarter of 1885-86. In the Warrant Department the outstandings amounted to Rs. 44,897, against Rs. 46,105 at the end of 1884-85. The receipts under the head of license-fees aggregated Rs. 4,84,597, against Rs. 4,88,104 in the previous year. Trade and profession licenses are shown to have yielded Rs. 2,65,229; carriage and horse licenses Rs. 98,786; trade refuse fees Rs. 34,947; hackney carriage registration fees Rs. 15,008; and cart registration fees Rs. 70,464.

Working of the various Departments of the Municipality.

The following statement shows the stage that has been reached in each case in the proceedings for the reclamation and improvement of bustees under the provisions of sections 280-283 of the Calcutta Municipal Act:—

Improvements completed—

1. Soortee Bagan Bustee.
2. Patwar Bagan do.
3. Joorapuker and Goalpara Bustee.
4. Bamun Bagan Bustee.
5. Kolabagan do.
6. Nather Bagan do.
7. Colvin's do.
8. Pathuringhatta do.
9. Fool Bagan do.
10. Kalaker do.
11. Parseebagan do.
12. Kaloo Ghose's do.
13. Jorubagan do., Sec. 283A

Improvements commenced—

14. Soorhatta Bustee.
15. Keranco Bagan do.

Projects finally approved, but work not commenced—

16. Durponarain Tagore's Bustee, No. 1.
17. Durmahatta do.
18. Ooriupara do.
19. Fukeer Chand Mitter's do.

Projects laid before the Commissioners in meeting for orders under Section 283A—

20. Shaikpara Bustee.

Draft projects of the improvements approved by the Bustee Committee—

21. Lallbagan Bustee.
22. Kristobagan do.
23. Sickdarpara do.

Orders issued to draw up the draft reports—

24. Hanspuker Bustee.
25. Moydaputty do.

Inspected by medical officers and their reports received—

26. Pachagully Bustee.
27. Goabagan do.
28. Moonsheetalao do.
29. Sovabazar do.
30. Moydatoleo do.
31. Bustee north of Manick Bose's Ghât Street.
32. Do. south of ditto.
33. Machoon Bazar Bustee.

Improvements ordered to be postponed—

34. Ganguly's Lane Bustee.

Improvements not necessary—

35. Durponarain Tagore's Bustee, No. 2
36. Kobirupara Bustee.

Orders passed to inspect the Bustee under Section 280—

37. Rajbullubpara or Goalpara Bustee.
38. Bustee north of Baug Bazar.

Though much remains to be done, it may be said that most of the more urgent cases have now been disposed of, and the chief duty of the Commissioners will consist in maintaining the ground they have gained. In the Suburbs nothing of this kind has yet been attempted. On the 20th March last the new main in connection with the extended water-supply of Calcutta was opened at Pultah. The proceedings were attended by a large body of the Commissioners, who had invited the Lieutenant-Governor to preside at the ceremony.

During the year fifteen tanks were filled up by the Corporation, and one by the owner. Besides these, two were being filled up by the Corporation and six by the owners at the close of the year. Twelve tanks have been emptied by the owners, and will be filled up during the current year. The sites of two filled-up tanks in Jorapuker and Goalapara bustee in Ward No. 6 have been acquired by the Commissioners, who propose to convert the space into a place of public recreation.

Forty-one bathing platforms have been completed, and are in actual working order. Six more have been completed, but have not been connected with the piping. Nine sites have been obtained and platforms are under construction, and proceedings have been undertaken for the acquisition of sites for 28 additional platforms, making a total of 84. A census was taken on the 11th and 18th April last of the number of persons who resorted to these bathing platforms. The total numbers amounted to 62,003, of whom 40,194 were males and 21,809 females. These figures are interesting, and show how popular the new bathing platforms have speedily become.

The grant for street improvements was as usual Rs. 30,000, of which a sum of Rs. 24,035-4-1 has been expended. This grant is intended for petty improvements only, all important works being undertaken from the drainage budget.

The civil litigation of the Commissioners during the year was insignificant. There was only one small suit for the

Law suits.

recovery of rates, which was decreed in favour of the Commissioners. One appeal was made to the Small Cause Court against the assessment of a house; but the valuation made by the municipal assessor was upheld by the Judge. The Commissioners had to defend in the Small Cause Court a suit which had been brought against them by a contractor for the recovery of the value of certain stores supplied; but the suit was dismissed. This diminution in the amount of litigation is said to be due to the establishment by the Commissioners of a "Conciliation tribunal," consisting of three Commissioners selected by the Town Council, to which any dispute between the Corporation and a member of the public may, with the consent of the latter, be referred. This mode of arbitration, which has everything to commend it, is said to be very frequently resorted to.

In the Police Court 18,998 prosecutions were instituted for infringement of the provisions of the Municipal Act. In the License Department the fines imposed amounted to Rs. 11,298, in the Conservancy Department to Rs. 4,725, and in the Health Officer's Department to Rs. 482. The total of the fines imposed amounted to Rs. 16,506, against Rs. 10,151 in the previous year. Under the Vaccination Act, 1,565 persons were proceeded against; of these, 892 were vaccinated and 180 inspected, 225 absconded, and only 54 were eventually fined for contumacy. Proceedings were taken by the Commissioners against the Tramway Company in the Police Court for their negligence in keeping in proper repair some of the roadway used by them. There were three such charges, resulting in the Company being fined Rs 50 in each case.

The report of the Health Officer (Dr. McLeod) has been drawn up for the calendar year 1885 instead of the official year.

Vital statistics.

This change is in accordance with the recommendation made by the Army Sanitary Commission. The number of births registered was 8,358, as compared with 8,290 in 1884. The Health Officer is of opinion that birth registration during the year was more satisfactory than formerly, a birth-rate of 29·3 per mille was obtained, as compared with the English rate of 34·4. Among the various races, the recorded birth-rates per mille were—

				1885.	1884.
Non-Asiaties	16·4	13·2
Mixed races	49·5	49·6
Hindus	20·3	20·2
Mahomedans	16·0	15·9
Other classes	4·1	4·2

The number of deaths recorded during 1885 (exclusive of still-births) was 12,707, as compared with 12,694 in 1884, giving a death-rate of 29·3 per mille, against 29·2.

At a special general meeting held on the 11th February 1886, a whole-time Health Officer was appointed by the Commissioners, and the appointment, regarding which during the past few years there had been much correspondence, received the sanction of the Lieutenant-Governor. Dr. Simpson assumed charge of his duties, after the year closed, on the 15th May 1886.

MUNICIPAL ADMINISTRATION AND LOCAL SELF-GOVERNMENT.

DURING the last five years, and even from an earlier period, complaints were

Bill to consolidate and amend the law relating to the Municipal affairs of the Town and Suburbs of Calcutta. Its object and principal provisions.

frequently made as to the insanitary condition of the suburbs immediately surrounding the town of Calcutta, and it was strongly urged that, to effect any improvement in the former, they should be united with the town under one system of municipal government. Indeed, the necessity of the measure was recognised so long ago as 1864, both by the late Justices of the Peace for the Town of Calcutta and the then Lieutenant-Governor of Bengal. Accordingly Sir R. Thompson, in a Resolution dated the 20th June 1885, appointed a Committee, under the presidency of the Hon'ble H. J. Reynolds, c.s., c.s.i., to prepare a scheme for the amalgamation of the urban portions of the suburbs with the town.

The Committee submitted their report on the 10th December 1885. They

	Population.
1. Entally ...	25,000
2. Baniapooker ...	18,000
3. Ballyganj and Tal- lyganj ...	20,000
4. Bhowanipur ...	38,000
5. Alipur ...	13,500
6. Ekbalpur ...	16,000
7. Watganj and Garden Reach...	28,000
Total ...	158,500

recommended the inclusion of the seven suburban wards named in the margin within the limits of the Metropolitan municipality, and stated that, to give effect to their scheme, the existing municipal law [Act IV (B.C.) of 1876] under which the affairs of the town were regulated should be amended. Accordingly a Bill to consolidate and amend the law relating to the Municipal affairs of the Town and Suburbs of Calcutta was introduced in the Bengal Legislative Council on the 10th April last. Briefly,

its provisions are as follows:—

The new Corporation will consist of 75 members, of whom 25 will be appointed by the local Government and 50 elected by male persons resident within the limits of the Corporation, who shall have attained the age of 21 years, who were owners or occupiers of property valued at not less than Rs. 300 per annum, or who paid a license-tax on professions, trades or callings of not less than Rs. 25 per annum, or who paid a tax of Rs. 24 a year on account of carriages and horses, or who were Fellows or graduates of the University of Calcutta. The Bill contains certain new provisions regarding the manner in which the members of a joint family, or a partnership or firm, shall exercise their right of voting. It gives a maximum of six votes to joint owners of a property valued at Rs. 1,500 or upwards per annum. A person qualified to vote is held to be qualified to be elected a Commissioner. For purposes of the election of Commissioners, the town shall be divided into 25 wards, and each ward to elect two Commissioners. Votes at all elections shall be given personally at the polling stations. It is proposed to recognise by law the existence of the Town Council. It shall consist of 15 members, of whom 10 shall be elected by the elected Commissioners of the 25 wards, united into five groups according to the contiguity of their situation. The remaining five members shall be appointed by the Lieutenant-Governor from among the appointed Commissioners. The Bill also proposes to give a fee of Rs. 20 to each member of the Town Council for each attendance at a meeting of the Council. These are the principal provisions of the Bill. There are other minor amendments made in the existing law, but they are too many to be enumerated here. The only new taxes which it is proposed to be levied are a conservancy rate not exceeding three per centum on the annual value of holdings, and a storage fee of four annas upon every case of petroleum brought within the limits of Calcutta for storage or consumption within those limits. The Bill abolishes the police rate.

The Bengal Municipal Act, III (B.C.) of 1881, which came into operation on the 1st August 1881, was in force in 133 municipalities in these Provinces during the year 1885-86. In the Bardwán and Patna Divisions it was in force in 24 towns in each Division; in the Presidency Division in 35 towns; in the Rájsháhí Division in 11 towns; in the Dacca Division in 15 towns; in the Bhagalpur Division in 9 towns; and in the Chittagong, Orissa, and Chutiá Nágpur Divisions in 5 towns in each.

The following table shows the number of Commissioners who were in office during the year:—

NAMES OF DIVISIONS.	Elected	Nom- inated	Official.	Non- officials.	Europeans.	Natives.	Total
1. Bardwán ...	215	127	44	208	36	306	342
2. Presidency ...	331	221	44	508	22	530	552
3. Rájsháhí ..	87	98	43	112	31	151	185
4. Dacca ..	115	92	37	170	19	188	207
5. Chittagong ..	39	32	13	58	5	66	71
6. Patna ..	166	182	71	274	41	307	348
7. Bhagalpur ..	82	58	21	119	27	113	140
8. Orissa ..	36	43	30	49	8	71	79
9. Chutiá Nágpur	17	54	17	51	10	61	71
Total	1,088	907	323	1,672	202	1,793	1,995

Out of a total population of 66,691,456 of the province, only 2,627,886 lived within municipal limits and received the benefits of a civil administration

The elective system has proved a success, and the new bodies of Municipal Commissioners acquitted themselves creditably in the performance of their honourary duties.

During the year the conservancy provisions of the Municipal Act, as contained in Part VI of it, were extended to the municipalities named below:—

1. Bansbariah.	11. The Suburbs of Calcutta.
2. Assensole.	12. The South Suburban Municipality.
3. Cutwa.	13. Kotechandpur.
4. Krishnagar.	14. Perozepur.
5. Barisal.	15. Goálándo.
6. South Barrackpur.	16. Patna.
7. North Barrackpur.	17. Bettia.
8. Khulna.	18. Madhubani
9. Baduriah.	19. Baxár.
10. South Dum-Dum.	20. Sahebganj.
21. Kendrapára.	

Part VII of the Act, which relates to water-supply, was extended to the Dárjiling Municipality during the year.

Part IX, which regulates the construction and cleansing of latrines, was extended to the following towns:—

1. Midnapur.	9. Nattoro.
2. Soory.	10. Madaripur.
3. Assensole.	11. Goálándo.
4. Calna	12. Faridpur.
5. Baidyabati.	13. Barisal.
6. Howrah.	14. Arrah.
7. Baranagore.	15. Jamalpur.
8. Dárjiling.	16. Sahebganj.

Part X, which contains provisions for the regulation of markets, was extended to the municipalities named below:—

1. Midnapur.	7. Chuprah.
2. Húgli and Chinsurah.	8. Revilganj.
3. Assensole.	9. Chittagong.
4. Cutwa.	10. Jamalpur.
5. Goálándo.	11. Sahebganj.
6. Faridpur.	12. Chuttra.

Part XI of the Act, which prescribes rules for registration of births and deaths, was extended to the town of Assensole during the year.

Bye-laws were framed by the Commissioners of the following municipalities, and approved by Government:—

1. Dárjiling.	3. Chittagong.
2. Rampore Beaulah.	4. Durbhunga.
5. Colgong.	

The total income of all the municipalities during the year amounted to Rs. 26,32,864, and the expenditure to Rs. 27,35,670, as shown in the table below. The deficit in the revenue was met from the balance of the previous year:—

DIVISION.	INCOME.			Expenditure.	Incidence of taxation per head of population.	Incidence of income per head of population.
	From taxation.	From miscellaneous sources.	Total.			
	Rs.	Rs.	Rs.	Rs.	Rs. A. P.	Rs. A. P.
Bardwán	4,60,735	1,04,732	5,65,467	5,74,272	1 3 4	1 6 6
Presidency	6,76,608	1,65,227	8,41,835	9,08,967	0 15 0	1 2 8
Rájsháhí	1,41,423	79,899	2,21,321	2,09,110	1 2 7	1 13 1
Dacca	1,81,902	54,710	2,36,612	2,65,297	0 13 8	1 1 0
Chittagong	45,930	19,553	65,483	61,774	0 11 11	1 1 0

Total	19,93,161	6,39,403	26,32,864	27,35,679	0 11 9	1 0 6

The Commissioner of the Bardwán Division in his annual report on the working of the municipalities in his Division during the year 1885-86, reported that the elective system had on the whole worked well. Many members of the Municipal Committees took a lively interest in their work, and the Committees as a body fully appreciated the responsibilities they had taken upon themselves. The working of the Act in the district of Nadiyá was not so successful as in the other districts of the Presidency Division. There was too much of party spirit manifested by the Commissioners in their deliberations. This was notably the case in the Santipur Municipality. In the 24-Pergunnahs the Magistrate remarks as follows:—"On the whole the new Commissioners appear to me to have done their work well. Too much time no doubt is often spent in oratorical exhibitions, and petty jealousies and impatience of control by an Honorary Chairman, who is no longer a Government official, give rise to occasional dissensions and interfere with a Committee's usefulness. In the end, however, the election scheme will, I think, prove a success. Meetings are well attended and are held more regularly than formerly, and the items of business are freely and often very warmly discussed." The Commissioner of the Division generally agrees with the Magistrate in his remarks, and adds that the new Commissioners have on the whole taken a decided interest in their work, and that if their deliberations have not always been marked by that courtesy to each other and deference to the decision of the majority that ought to prevail, these were defects to be anticipated, and it may be trusted that time and experience will do much to remedy them. Local associations watch the proceedings of the Corporations and criticise them not always in a very friendly tone, and the authority of the Commissioner is frequently invoked to set aside or amend these decisions.

The Commissioner of the Rájsháhí Division records the following remarks on the working of the new Municipal Act:—

"Dárajling and Jalpáiguri are not elective municipalities. Kurseong declined to be elective, and the Commissioners had to be appointed. The Municipal Commissioners of Dinagepur and Rungpur wisely elected the district officers as Chairmen. In these four municipalities municipal administration was consequently as good as ever, and there were no disputes. In Rampur Beaulah a Government official with some training was elected Chairman, and has on the whole done very well. Among the elective municipalities, the Municipal Commissioners of Bogra and Sirájganj, and then those of Pabná, have as a body done best. In Rampur Beaulah there were differences of opinion, and troublesome references in consequence. In Sherepur the Municipal Commissioners as a body misbehaved grossly towards their Chairman owing to jealousy and party spirit, the matter being reported to Government at the time. In Nattore jealousy of the official Vice-Chairman was shown by some Commissioners, who on one occasion recorded objectionable remarks, which, however, were repudiated by others.

"In all the elective municipalities, except Dinagepur and Rungpur, there was, as was only to be expected, at first an insufficient regard for the requirements of the law, and jealousy of the Chairman was evinced as also a desire to prevent his exercising his powers independently of the Commissioners in meeting as much as possible. There was no appointment of any consequence made in these municipalities, and so there was no rivalry of party candidates. In one municipality an attempt was made to deprive the rate-payers of a good Assistant Surgeon, and to appoint an inferior one to a dispensary hospital, the general impression being that this was advanced in the interest of two Municipal Commissioners, who are medical practitioners. This was opposed by the elected native Chairman to his credit. Fortunately this required an alteration in the budget, and a memorial signed by numerous rate payers, official and non-official, was sent to me protesting against the proposal, which was disposed of by my refusing to sanction the alteration in the budget."

The Commissioner of the Dacca Division states as follows:—"The working of so many municipalities under elected Chairmen, and generally the management of the towns by the representatives of the rate-payers, is the most interesting feature of the year's municipal history. It would not be safe yet to venture on an opinion as to how the new system will work; but I am

inclined to think that it will be more successful in the small towns than in those of large size and with a large population. Dacca, for instance, has an admirable Chairman, and the constitution of the Municipality is as good as could be expected; but I am not quite satisfied with the state of affairs. There are conflicting interests, and Commissioners (elected ones specially) are in considerable awe of their constituents. However, there is no reason yet for despair, and time may remove the obstacles to improvement which now exist."

A question was raised as to the interpretation of the term "resident" within the limits of a municipality, which occurs in clause 2 of section 15 of the Municipal Act. It arose in connection with the election proceedings in the Serampur Municipality. A gentleman, who was a rate-payer of both the Serampur and Bali Municipalities, appeared as a candidate for election as a Commissioner for the Serampur Municipality. An objection was raised against his candidature on the ground that he was not a permanent resident of Serampur. The gentleman had two residences—one at Bali, where his family resides, and the other at Serampur, where he carried on his profession as a medical practitioner. It was stated that under clause 2, section 15 of the Act, a continuous residence, without a break during twelve months preceding the election, was necessary; and that if a man left his place of abode at all during the year, he forfeited his right to be considered a resident. The question was referred to the Legal Remembrancer for his opinion; and with his concurrence it was decided that a person who paid the municipal taxes in two places and resided from time to time in both was entitled to the rights of a voter, and was competent to stand for election in both the municipalities.

Act III (B.C.) of 1885, entitled an Act to extend the system of Local Self-Government in Bengal, was passed by the Bengal Legislative Council on the 6th April 1885, and it received the assent of the Governor-General on the

11th July following. The object of this enactment is to give the people of Bengal a substantial interest and responsibility in the management of their own local affairs. The District Road and School Committees had very limited powers, and these powers were generally exercised under close official control. The Committees hardly offered any attraction to men of education and ability who desired to participate in the management of public business, and they afforded no relief to the Government staff in the administration of the departments of work with which they were supposed to deal. The Local Self-Government Act will supply the people with that field of usefulness they wanted, and will relieve Government officers of much responsibility. The Act has force and effect in every district in these Provinces, except in the districts of Singbhum, the Santál Pergunnahs, and the Chittagong Hill Tracts, and in the town of Calcutta, and in all those towns which are incorporated into municipalities under the provisions of the Municipal Act. It provides for the establishment of a District Board in every district, and of Local Boards in sub-divisions

1. 24 Pergunnahs.	9. Midnapur.	of districts, where the Lieutenant Governor may think there is available material for the formation of such Committees. It directs, however, that in every sub-division of the sixteen districts, named in the margin, a Local Board shall be established. It also provides for the formation
2. Nadiyá.	10. Bánkura.	
3. Murshédábád.	11. Bírhmú.	
4. Jessor.	12. Dacca.	
5. Khulna.	13. Faridpur.	
6. Húgli.	14. Rajsháhí.	
7. Howrah.	15. Pabná.	
8. Bardwán.	16. Patna.	

of Union Committees in a village or group of villages in any sub-division of a district. The members of Union Committees shall be elected from among the residents of the Unions, and shall in no case be less than five or more than nine. The Act has, however, given the Lieutenant Governor power to direct, by an order in writing, for reasons to be stated in such order, that any Union Committee shall consist, either wholly or in part, of members appointed by the Commissioner of the Division. The constitution of Local Boards in the districts mentioned above shall consist of members, of whom two-thirds are to be elected and one-third nominated by Government. In all the other districts the members of Local Boards are to be appointed by Government; but the Lieutenant-Governor has been vested with the power to enter the name of any district in the third schedule of the Act. The number of members of a Local Board shall be fixed in each case by Government, but shall not be less than six. A

District Board shall consist of such number of members as the Lieutenant Governor may fix by notification, but shall not be less than nine. In districts where Local Boards shall have been established, the District Boards shall consist of members one-half of whom shall be elected by the Local Boards, and the other half appointed by the Government.

The Act has entrusted these Boards with extensive powers and duties in regard to roads and communications, hospitals and dispensaries, sanitation, vaccination, famine relief, taking of census, maintenance of staging bungalows, holding of fairs and exhibitions, and other matters of public interest and utility. They have also been entrusted with the maintenance and management of a primary and middle schools under public management within their respective jurisdictions, and the distribution of grants-in-aid among private institutions for the promotion of primary education. Powers have also been given to them to construct and maintain tramways, railways, and water-works, and to take charge of or construct public buildings on behalf of Government.

Considerable time was occupied in framing rules under the various clauses of section 138 of the Act. Rules in eight parts have been passed. They embrace subjects noted in the margin. Preliminary rules have also been prepared prescribing the qualifications of candidates for employment as District Engineers, Overseers and Accountants, &c. These rules have not yet been finally passed by Government. A set of model rules, under section 32 of the Act, for the conduct of business at the meetings of the Boards, have been prepared and circulated among the various District Boards for their guidance in framing rules under the section.

- Part I.—Rules for the election of Members of Union Committees.
- Part II.—Ditto ditto of Local Boards.
- Part III.—Ditto ditto of District Boards and term of office of Members of Boards.
- Part IV.—Rules for the conduct of proceedings of Boards.
- Part V.—Rules regulating the power of District Boards to transfer property, and to enter into contracts.
- Part VI.—Rules for the maintenance and management of schools and other educational institutions.
- Part VII.—Rules for the control and administration of dispensaries and hospitals.
- Part VIII.—Rules for keeping the accounts of the Boards and for their periodical audit.

On the 1st July last a circular was issued to the Commissioners of the Presidency, Bardwán, Rájsháhí, Dacca, and Patna Divisions, giving them instructions for the introduction of the Act in the sixteen districts specially named in Schedule 3 of it. On receipt of their replies, District and Local Boards have been constituted. They came into existence on the 1st October last, from which date also the Act came into force in these sixteen districts. By a notification dated the 1st October last, the various District Boards were placed in funds by the transfer of the balances of the District Road Committees under the Cess Act, they ceasing to exercise their functions from that date. The District Boards have also been vested with the powers of the Magistrate under chapters I to IV of the Cattle Trespass Act of 1871. It is the intention of the Lieutenant-Governor to extend the provisions of the Local Self-Government Act to all the districts not mentioned in the third schedule of the Act, with effect from the 1st April 1887. Circulars have accordingly been issued to the Commissioners of the Rájsháhí, Dacca, Chittagong, Patna, Bhagalpur, Orissa and Chutia Nágpur Divisions, requesting them to arrange the necessary preliminaries for the introduction of the Act in all those districts in which it is not in force at present.

Marine.

At the close of the year the Pilot Service was 85 strong, including 40 Government pilots, 21 licensed pilots, and 24 not fully qualified leadsmen and mates. The number of qualified pilots, both service and licensed, was 61. This brings the number to within one of accepted constitution of the Pilot Service. Four leadsmen apprentices arrived from England during the year to recruit the service. Out of the total number of leadsmen apprentices, seven, on passing the necessary examinations, were admitted to the mate's grade. One of these appointments was reserved for a locally selected candidate; but as no candidate appeared at the examination, which was duly advertised to take place in April 1886, it was decided to include the vacancy among those to be filled by cadets from the training-ships in England. The leadsmen's quarters at Garden Reach, under the superintendence of Mr. Mignon, are now well established and are reported to be comfortable and attractive.

The number of steamers which arrived at Calcutta during the year was 587 with a gross tonnage of 1,363,932 tons, as against 532 with a gross tonnage of 1,243,500 tons in the previous year. The number of sailing vessels rose from 371 to 444, and the gross tonnage from 486,374 to 610,457. The increase of tonnage indicates a revival in the trade of the port.

				<i>Steamers.</i>			
Year.				No.		Gross tonnage.	
1884-85	528		1,230,284	
1885-86	582		1,351,059	
				<i>Sailing vessels.</i>			
1884-85	395		514,987	
1885-86	387		520,877	

These figures do not include 10 light-vessels, 10 pilot and other Government vessels, 4 sea-going vessels, 8 tugs, and the steamers plying to the Orissa ports, of which there were 335 arrivals and 336 departures, and native craft. There was during the year a decrease of six in the number of arrivals of vessels of heavy draught, and an increase of nine in the number of departures, as shown below :—

	ABOVE 21 TO 22 FEET.		ABOVE 22 TO 23 FEET.		ABOVE 23 TO 24 FEET.		ABOVE 24 TO 25 FEET.		ABOVE 25 TO 26 FEET.		TOTAL.			
											1885-86.		1884-85.	
	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.
Steamers	38	42	38	70	22	81	4	42	8	102	246	111	213
Sailing vessels	79	110	37	68	4	18	1	7	121	203	118	197
Total	117	152	75	138	26	102	5	49	8	223	449	229	410

The gross tonnage of the port was 3,846,325 tons, against 3,475,145 in 1884-85. There was, however, still a falling off compared with 1882-83 and 1883-84, when the tonnage amounted to 3,961,294 and 3,937,195 tons respectively.

The receipts under the head of pilotage during the year were Rs. 7,59,771, or Rs. 20,021 in excess of 1884-85. The mercantile community have benefited to the extent of Rs. 1,34,077 during the year from the reduction of pilotage by 15 per cent. carried out on the 1st August 1881. During the year the Branch Pilots piloted

on an average 5·36 vessels a month, against 4·99 of 1884-85, the Senior Master Pilots 3·41 against 3·02, the Junior Masters 2·38 against 1·92, and the Mates 2·58 against 3·41. Six vessels were placed in charge of leadsmen apprentices in the temporary absence of qualified pilots.

There was a marked decrease (from 51 to 37) in the number of groundings, and only in two cases was any damage done, while the pilot in charge was considered to blame in only four cases. Of the 16 collisions which occurred during the year, six were either unimportant or accidental, and five were the result of mismanagement. In three cases only was serious damage done. Taking groundings and collisions together, the percentage of accidents to the number of vessels was 2·65, against 3·72 in the preceding year.

Fifteen departmental enquiries were held during the year to investigate the conduct of pilots in connection with casualties which had occurred to vessels in their charge. In two cases only was any substantial punishment inflicted upon the pilots, while in one case—that of the fouling of the Apex buoy by the *S. S. Medina*—owing to the gravity of the offence, and the inability of the Departmental Committee to deal with the case adequately, the matter had to be referred to a Court appointed under Act XII of 1859, and eventually the license of the pilot was suspended for two months. There were twelve cases in which Special Courts of Enquiry under Act V of 1883 were held during the year. These were the stranding of the ships *Glenlui*, *Knight of the Garter*, *Star of Albion*, *Karamania*, and *General Picton*; the grounding of the *Kalmia* and *Cannanore*; the foundering of the *British Statesman* and the *Merchantman*; the wreck of the *Tewkesbury*, the collision between the British barque *Wolseley* and the schooner *Strathendrick*, and the outbreak of fire on board the British ship *J. W. Parker*.

The Eastern Gut Channel was very favourable during the year, with the exception of the Nynan bar, which was so low for five months as to be an obstruction to navigation. The depth of water over the Moyapore bar was also somewhat low, but at no time of the year excessively low.

The *S. S. Undanuted*, which underwent thorough repairs during the year, made 19 trips, viz. 12 to the Sandheads, 5 to Orissa and False Point, and 2 to Chittagong. The pilot brigs *Coleroon* and *Sarasuti* are both in good order. The *Cassandra*, according to the report of the officers who conducted her survey in April 1884, will not be fit for further service as a pilot-vessel after March 1889, and arrangements are now being considered for replacing her by a steam-vessel to be specially constructed for pilot work.

The examination for Colonial Certificates to Masters, Mates, and Engineers resulted in the passing of 8 Masters, 32 Mates, and 9 Engineers, out of 11, 44, and 30 candidates respectively. For Local Certificates, only 1 candidate appeared for the Master's examination, and 2 for examination as First Mate, all of whom passed; while out of 3 candidates for the Second Mate's examination, and 33 for Engine-drivers, 1 and 24 respectively passed. Five candidates appeared for certificates of competency as first-class Engineers of inland steamers, of whom none passed; while all the 4 candidates for certificates of competency as second-class Engineers of inland vessels were successful. Out of 11 candidates for certificates as Commanders of inland vessels, and 2 as Ship-surveyors, 10 and 1 respectively passed. Four candidates obtained licenses as steam-tug pilots of the Húghli. Of the 4 licenses to native pilots, 3 were renewed during the year. Eighteen new permits were granted to native coasters between 100 and 200 tons, and 11 were renewed. Three vessels were registered under the Merchant Shipping Act of 1854, and the registry of 6 was cancelled. One vessel was registered under Act X of 1841. Sixty-five A and 436 B certificates under the Native Passengers Act VIII of 1876 were issued by the Port Officer during the year, showing a decrease of 8 and an increase of 64 certificates respectively compared with the figures of 1884-85.

During the year the Health Officer inspected 780 in-coming vessels, of which 646 were engaged in the foreign trade and 134 were coasters. The total number included 387 steamers and 393 sailing vessels, which, classified according to nationality,

were 665 British, 39 French, 12 German, 6 Norwegian, 4 Swedish, 17 American, 9 Austro-Hungarian, 5 Italian, 1 Danish, 15 Arab and Turk, 4 Zanzibar, 2 Maldiva, and 1 Siamese. The crews amounted to a total of 35,879, of whom 18,989 were Europeans and 16,890 natives. The out-going vessels inspected were 626 in number, of which 551 were in the foreign and 75 in the coasting trade. They carried a total number of 15,332 European and 10,134 native seamen. Compared with the previous year, the number of vessels inspected shows an increase; 715 in-coming and 482 out-going, or a total of 1,197 vessels, having been inspected in 1884. The increase is reported to be partly due to the new system introduced in September last of granting bills-of-health on board after inspection of vessels.

The health of the European seamen was exceptionally good during the year. The average number admitted into the hospital was 1,167, against an average of 1,254 for the five previous years. The death-rate, 23·6, fell also to nearly one-half of what it was in 1884. The mortality from cholera during the past year appears to have been the lowest ever recorded in the port, the ratio per mille being 4·13, against 21·37 in the previous year, and 19·91, the mean of the quinquennium 1880-84. The distribution of this disease on the river seems to very nearly coincide with its distribution on shore, and the decline in mortality from this cause among the seamen corresponds very closely with the figures for the whole town. There were no deaths from diarrhoea during the year, but there was an increased prevalence of dysentery as compared with the two preceding years, the death-rate being 3·54, against an average of 2·34 for the five previous years. Fevers were more numerous than in the previous years. There were three cases of small-pox, but none terminated fatally. The number of cases of sunstroke admitted into the hospital fell from 13 in 1884 to 5 in 1885, which shows that endeavours are made to prevent unnecessary exposure of sailors on board ships. There was no increase of venereal disease among the European seamen, notwithstanding the withdrawal of the Contagious Diseases Act from Calcutta.

The total mortality afloat and in hospital among the native population of the port, numbered at 25,000 in the census of 1881, gave a rate of 4 per 1,000, as compared with 7 in 1884, the decrease being due to a falling off in the number of deaths from cholera. In 1884, 138 deaths from cholera occurred, while in 1885 the number fell to 59—a lower mortality than has been recorded in any year since 1880. Bowel-complaints were more numerous than in 1884. Fevers and small-pox, however, caused fewer deaths.

Thirteen cases of scurvy among European seamen, against 24 in 1884, were treated in the past year. The disease was in no case due to improper food or neglect of rules. Seven cases of scurvy were found on board a vessel from New York carrying a lascar crew. It appeared from enquiries made that the vegetables supplied to them were not in accordance with the terms of their agreement. They were, moreover, supplied with two indifferent and suspicious kinds of lime-juice—one containing an insufficient quantity of citric acid, and the other an excess over the authorized standard.

The sanitary condition of both banks of the river was to some extent unsatisfactory; but measures were taken for the removal of the more serious nuisances. A great number of floating bodies are still met with in the river. Last year 50 human bodies and 4,136 carcasses of animals were removed by the conservancy establishment of the River Police, against 86 bodies and 3,975 carcasses in the previous year.

There were no complaints during the year regarding the quality of the filtered water supplied to the shipping by the Municipality; but the Health Officer objects to the manner in which the water is conveyed to the shipping. The attention of the Municipality has been called to the remarks made by him on the subject.

The usual enquiries were made as to the health and treatment of lascar crews. Only one case of ill-treatment was brought to notice, in which no lime-juice was supplied at sea to the crew of a sailing vessel, and compensation was subsequently made to the crew. The Compulsory Vaccination Act was, owing to the absence of small-pox in the port, and pending the passing of the new Act, not put in force.

The present system of accounts in the Calcutta Shipping Office worked

Calcutta Shipping Office.

well and to the satisfaction of all parties concerned.

A representation having been made by certain boarding-house keepers that they found a difficulty in cashing, after bank hours, cheques of seamen who had to join their vessels at once, the Shipping Office, it is said, undertook to cash its own cheques in urgent cases after bank hours.

An important step was taken during the year in the introduction at the port of Calcutta of the system of "continuous discharges." Under this system native seamen (for whom alone it is intended) are rendered practically independent of the licensed broker and ghât serang, as they can always be sure of obtaining employment by the mere production of their certificates, if the remarks recorded on the certificates, on the men being discharged after a voyage, are of a favourable character. The system has, however, been introduced only on a voluntary footing, and its success will depend on the extent to which advantage is taken of it by Shipping Companies in making the possession of a "continuous discharge" an indispensable condition of employment. By means of the descriptive roll which is provided for under this system, it is expected that the practice of giving substitutes, so common among native seamen, will to some extent be checked, as false personation will be rendered less impossible of detection. The form of agreement between masters and seamen was revised during the year, and a scale of provisions for lascars and native seamen on board foreign-going and home-trade ships, under section 28 (1), Act V of 1883, was sanctioned.

The receipts of the Calcutta Shipping Office during the year amounted

Financial results.

to Rs. 24,635-1-9, and the disbursements to

Rs. 19,903-4-3, leaving a balance in favour of the office of Rs. 4,731-13-6. These figures, though differing somewhat from those of the previous year, do not compare unfavourably with them; for while, on the one hand, the receipts were diminished owing to the steamers of the Peninsular and Oriental Steam Navigation Company shipping and discharging their crews at Bombay instead of at Calcutta, as they did in the preceding year, on the other hand there was a saving in expenditure in consequence of the death of Mr. Ellis, the late Deputy Shipping Master. The net profits of the year exceeded those of the previous year by Rs. 288-3-3.

The following statement shows the result of the transactions during the year compared with that of the preceding year in funds held in trust by the Calcutta Shipping Office on account of both European and Native seamen:—

			1884-85			1885-86.		
			Rs.	A.	P.	Rs.	A.	P.
Opening balance	6,399	10	8	3,759	4	10
Receipts	56,152	8	11	57,295	10	0
	Total	...	62,552	3	7	61,054	14	10
Repaid and lapsed to Government	58,992	14	9	53,170	14	4
Closing balance	3,759	4	10	7,884	0	6

The increase in receipts was chiefly under the head "Deposit money of British seamen." It is said that, owing to the depression in trade, the demand for European seamen fell so low that it was deemed expedient, in the case of every seaman discharged by mutual consent, to require him to deposit a portion of his wages as security against his falling into distress. The amount realised on this account during the year exceeded that realised in the previous year by Rs. 10,112-10-11. The whole of it, however, was not repaid before the close of the year, as many of the seamen from whom deposits had been taken during the latter part of the year had not up to its close obtained employment either on boardship or on shore, and there remained, therefore, a balance in hand of Rs. 5 323-9-1. The amount realised as "deposit money of native seamen" fell from Rs. 8,717-8 4 in the year 1884-85 to Rs. 1,094-1-4 in the year under review, the decrease being attributed to the diminution in the number of seamen discharged.

The total amount received during the year on account of the estates of deceased British seamen was Rs. 6,888-9-4, the whole of which was remitted to the Board of Trade

Deceased seamen.

as usual. Including the balance brought forward from the previous year, the receipts on account of the estates of deceased native seamen amounted to Rs. 4,681-10; the disbursements amounted to Rs. 2,926-15-9, and Rs. 295-3-2 lapsed to Government, thus leaving a balance at the end of the year of Rs. 1,459-7-1, which might have been reduced but for the fact that the effects of some estates were deposited only a few days before the close of the year, and there was not sufficient time for their disposal.

The total amount remitted by seamen to their families at home was Rs. 16,990-11. This is considerably less than the amount remitted in any of the three preceding years, and the decrease is said to be probably due to the unprecedently high rate of exchange ruling for the money-orders by means of which these remittances are made.

The numbers of seamen of all nationalities shipped and discharged through the Calcutta Shipping Office during the year were 14,829 and 13,946, respectively, against 15,649 and 14,438, the corresponding numbers of the previous year. There were 207 desertions reported, against 202 in the previous year.

The number of distressed British seamen sent home during the year was 74, of whom 19 were sent away for want of employment, 3 for injury sustained while serving on board-ship, 1 for insanity, and the remainder for sickness. The 19 sent away for want of employment were of the class of seamen usually employed as stokers, coal-trimmers, stewards, &c., regarding whom it is observed "there is little or no demand here."

The number of ships visited by the Deputy and Assistant Shipping Masters for the purpose of enquiring into the health of the crews, inspecting provisions, shipping, discharging, or paying off crews, was 363, against 384 in the previous year, the decrease being due to the fact that fewer ships arrived during the first quarter of the year under report. The health of the seamen, both European and native, is reported to have been good. The number of casualties at sea among the former was 41, against 27 in the previous year, the chief cause of death being drowning. Fifteen cases of scurvy were reported during the year, 5 of which were among European and 10 among native seamen. In every instance due enquiry was instituted and proper steps were taken to remedy any defects brought to light. Three complaints regarding shortness of provisions and lime-juice, and one of extortion, were made by native seamen during the year. In all except the last, which proved on enquiry to be groundless, compensation was after due enquiry awarded.

The receipts of the Chittagong Shipping Office during the year under report amounted to Rs. 252-6, against Rs. 343-13-9, Rs. 396-8, and Rs. 436-8, the total receipts of the three preceding years. The decrease is again ascribed to the falling off in the number of native lascars both shipped and discharged. The total amount of the funds held in trust by the Shipping Office on account of the wages and effects of British and native seamen was Rs. 8,616-10-2, the whole of which was disbursed before the close of the year. The number of seamen, both European and native, shipped and discharged during the year was 275 against 298, the number shipped and discharged in the previous year. There was a large increase in the number of British seamen shipped and discharged, which is said to have been due to the fact that several vessels arrived at Chittagong with time-expired men, who were shipped either in the colonies or ports abroad, and paid off on their arrival at Chittagong, where some of them re-engaged. During the year 119 ships were visited by the Shipping Master, and the results are said to have been generally satisfactory. The health of the seamen in port is reported to have been fairly satisfactory. Two cases of suspected scurvy were brought to notice, and it was ascertained on enquiry that, if they were really cases of scurvy, they were not induced by the want of precautionary measures. Three deaths occurred at sea and two among the seamen in port. Ten cases of desertion (five Europeans and five natives) were reported. In none of them, however, did the deserter fall upon the hands of Government as a distressed seaman. The number of seamen convicted by the Magistrate

during the year was 69, against 64 in the previous year. Most of the offences were, however, cognizable under Act I of 1859.

The transactions at the Orissa ports were few and unimportant. At False Point only one British seaman was discharged, against 99 in the preceding year, the amount realised for his discharge being one rupee. One death by drowning occurred in the port. The provisions on board the British barque *Victorine* having been reported and found on investigation to be deficient, the Shipping Master directed the supply of the necessary provisions. Six of the crew of the British barque *Tewkesbury* having refused duty were, on conviction before the Deputy Magistrate, sentenced by him to a term of rigorous imprisonment, and transferred to the Presidency Jail at Calcutta. At Chandbally only one British seaman was discharged, for which a fee of one rupee was realised. No transactions are reported to have taken place at Pooree.

Orissa Shipping Offices.

During the year under review a reduction of Rs. 1,08,412 was made by the Port Commissioners in the consolidated debt owing to Government, and a sum of Rs. 56,400 was invested on account of the sinking fund for the debenture loans of 1881 and 1883. A loan of Rs. 22,17,000 was raised, and an advance of Rs. 29,06,498 was received from Government to enable the Commissioners to proceed with the dock-works. The total debt of the Port Trust at the close of the year was as follows:—

				Rs.
Consolidated repayable debt due to Government	...			47,56,681
Port book debt not repayable	17,65,000
Due on debenture loan of 1881	10,00,000
Ditto ditto of 1883	20,00,000
Ditto ditto of 1886	22,17,000
				<hr/>
				1,17,38,681
Advance from Government	29,06,198
				<hr/>
			Total	1,46,45,179

The assets of the Trust, on the other hand, exclusive of the value of Strand Bank lands, which the Commissioners received free of cost from Government in 1870, are shown as amounting to Rs. 2,01,34,011, thus:—

				Rs.
Expenditure on jetties and appliances for sea-going vessels to the end of March 1886				71,29,559
Ditto on inland vessels' wharves, landing-stages, tramway, &c., on the Calcutta bank of the river	62,11,572
Ditto on inland vessels' wharves, landing-stages, tramway, &c., on the Howrah bank of the river	14,92,432
Ditto on dock for docking and repairing vessels, &c.	5,25,000
Ditto on moorings, anchor-vessels, Harbour-Masters' boats, light-ships, survey vessels, &c.	38,64,559
				<hr/>
				99,244
				50,900
				3,64,250
				1,99,995
				2,06,100
				<hr/>
Ditto on Reserve Funds
			Total	2,01,34,011

In addition to this expenditure, a sum of Rs. 29,06,498 was expended up to the close of the past year on the Kidderpore Dock-works. The total nominal value of the property held by the Trust against their debt of Rs. 1,46,45,179 is therefore Rs. 2,30,40,509. No allowance is here made for depreciation in the value of the block.

The income under revenue account amounted to Rs. 25,86,136 against Rs. 26,28,319 in the previous year, or, including the opening balance of the year, to Rs. 31,26,232, against Rs. 31,06,720 in 1884-85. The total expenditure, inclusive of contributions on account of sinking funds and the Port Approaches, amounted to Rs. 27,31,612, and the net credit balance on the 31st March 1886 was therefore Rs. 3,94,620. The capital account shows an income of Rs. 22,49,479, after deducting the deficit balance of Rs. 13,84,452 at the close of the past year, and an expenditure of Rs. 21,22,977.

Out of the expenditure of Rs. 21,22,977 on new works, Rs. 23,364 were spent on jetty works, Rs. 11,517 on the Inland vessels' wharves, Rs. 2,05,287 on the Howrah Fore-

New works.

shore Road, Rs. 29,692 on the Harbour Masters' Department, Rs. 1,65,336 on vessels for the Port Approaches, Rs. 1,55,072 on the tea warehouse at Armenian Ghât, Rs. 1,19,816 on the petroleum wharf at Baj-Baj, Rs. 13,46,854 on the new dock-works at Kidderpur, and Rs. 66,039 on miscellaneous works. Of the outlay on the jetties, about three-fourths were expended on a new cargo-boat for the 30-ton crane, and the balance on the repairs of No. 7 jetty shed, where the floor had subsided. The expenditure on the Inland vessels' wharves was mainly incurred for the payment of claims for the Howrah Fore-shore Road land; for the construction of two new jetties for the Gangos and Howrah Mills, and a landing-stage for the Watson's Patent Press Company at Baug Bazar; for metalling the Shalimar road, and for the laying of sidings from the Shalimar Tramway to the Howrah Mills, and to the Seebpore juto-works and rice golahs. The principal item of expenditure in the Harbour Masters' Department was a new anchor-vessel, and that in the Port Approaches Department a new light-vessel. Of miscellaneous works, the chief item was a new dredger, which absorbed nearly seven-eighths of the total expenditure.

Notwithstanding the falling off in the receipts from hoisting charges from the abnormally high figure of Rs. 82,423 in 1884-85 to Rs. 44,183 in the past year, provision of accommodation for Government vessels at Nos. 1, 5, 6 and 8 jetties for 17 days in October and November 1885 for the embarkation of troops and munitions of war for the Burmah expedition, and a further decrease in the receipts from overtime fees, the gross income from the jetties was Rs. 13,718 in excess of that of the previous year. This was due to an increase in the receipts on account of goods landed and shipped, and in warehouse rent. Overtime fees decreased owing to the discontinuance of night-work at the jetties, except in urgent cases. The increase of expenditure during the year is said to be due to the landing, shipping, and warehousing of an increased quantity of goods. The net revenue of the jetties was Rs. 4,373 in advance of that of the previous year.

The earnings of the 30-ton crane amounted to Rs. 29,569 against Rs. 61,394 in the previous year, and the cost of its maintenance to Rs. 13,834 against Rs. 11,889. The receipts had, as already stated, been abnormally high in 1884-85, in consequence of the landing of a number of heavy marine boilers, and subsequent outside work in putting them on board inland steamers then under construction. The increase in the charges was caused by the completion of the new 100-ton barge, the cost of the crew and the working expenses of which are met from the earnings of the crane.

The receipts from the Inland vessels' wharves amounted to Rs. 3,93,587 as compared with Rs. 3,55,081 in 1884-85. This increase was due to increased traffic at nearly all the wharves, both on the Calcutta and the Howrah banks of the river. As regards expenditure, there was an increase of Rs. 31,420, which was mainly due to increased charge for interest on account of the loans raised for the Howrah foreshore wharves, to the transfer from Part III to the Inland Wharf Department of the rent and municipal taxes payable on the Seebpore chur land, and to increase in working expenses and salaries. The net revenue of the year amounted to Rs. 1,47,176 against Rs. 1,40,090 in the previous year.

The receipts from Strand Bank lands amounted to Rs. 1,73,342 and the charges to Rs. 1,06,371, against Rs. 1,84,124 and Rs. 1,28,136 respectively in the past year. The decrease in both receipts and charges was caused by the elimination of the income and expenditure on account of the Seebpore chur land. The net revenue amounted to Rs. 66,971 as compared with Rs. 55,988 in 1884-85.

The receipts credited to the Harbour Masters' Department amounted to Rs. 5,21,061, or Rs. 36,845 less than in the previous year. The decrease was mainly due to a falling off in the receipts from mooring hire and Harbour Masters' fees, and is explained by the fact that the port charges due from 61 vessels that entered the port during the year remained unrealised at the close of the year. It is explained that these charges are seldom paid till a vessel is clearing; and though there is always a considerable amount outstanding, it is seldom so large as in the year under review.

An important amendment was made during the year in the payment of overtime fees to Assistant Harbour Masters. Under the old rule Assistant Harbour Masters were allowed extra fees at the rate of Rs. 16 for all work performed on Sundays and recognised holidays, and for all work performed between the hours of 8 P.M. and 5 A.M.: thus if an Assistant Harbour Master attended a vessel on a Sunday or holiday before 5 A.M. and remained on board till after 7 or 8 A.M., he was entitled to two extra fees of Rs. 16 each. The rule, as revised, entitles him to only one extra fee for night and holiday work, unless he has been on duty for more than eight hours.

The following statement shows the number and tonnage of vessels that visited the port during the past three years. Dhondies, tugs, steamers employed in the Chandbally trade, and inland steamers and flats, are not included:—

YEARS.	ARRIVALS.									DEPARTURES.								
	Number.			Gross tonnage.			Net tonnage.			Number.			Gross tonnage.			Net tonnage.		
	Steamers.	Sailing vessels.	Total.	Steamers.	Sailing vessels.	Total.	Steamers.	Sailing vessels.	Total.	Steamers.	Sailing vessels.	Total.	Steamers.	Sailing vessels.	Total.	Steamers.	Sailing vessels.	Total.
1883-84	608	489	1,085	1,371,809	605,567	1,977,369	904,611	586,749	1,491,360	601	469	1,072	1,379,291	580,751	1,959,826	905,980	561,311	1,471,300
	532	371	907	1,243,500	486,371	1,729,871	811,217	470,131	1,281,350	524	365	889	1,200,000	511,981	1,711,971	807,880	497,010	1,304,758
	587	411	1,031	1,363,932	610,157	1,974,389	890,681	590,919	1,482,670	582	387	969	1,261,279	590,877	1,871,936	883,152	565,515	1,386,697

It will be observed that there was an increase in the number and tonnage of both steamers and sailing vessels entering the port as compared with those of the previous year, although they were slightly below the figures for 1883-84. Of the steamers arriving in the port in the past year, 191, with an average tonnage of 3,103, came from European ports *via* the Suez Canal. The average tonnage of sailing vessels and steamers employed in the trade of the port was 1,361 and 2,323 respectively.

Twelve casualties happened to vessels whilst in charge of the Assistant Harbour Masters during the year. In four of these the Assistant Harbour Masters are stated to have been in fault. In the other cases the accidents were caused by circumstances over which the officers of the Port Trust had no control. The percentage of accidents was lower than in the preceding two years, being 1.16 against 1.21 in 1881-85 and 1.19 in 1883-84. The percentage is still considerably higher than in the eight years ending 1882-83.

The moorings were all examined during the year, those found defective being replaced with new materials. Eight moorings were abolished—six to increase the length of Nos. 3 and 4, Hastings' moorings, one at Matiabruz to give free approach to the landing-stage, and one at Oolooberiah. An equal number of new moorings was laid, so that the total number of moorings remains the same (228) as at the close of the previous year. Of these, 178 are fixed and 50 swinging. Two fixed moorings are obstructed by wrecks, ten fixed and two swinging are reserved for Government, and nine fixed and five swinging for vessels belonging to the Port Trust: 157 fixed and 43 swinging moorings are therefore available for vessels trading to the port. Of these, 21 fixed and 23 swinging moorings are leased out to private firms, leaving 136 fixed and 20 swinging moorings available for the use of the public. The dredger was employed on 139 days during the year, at a cost of Rs. 31,701, the average cost of 1,000 cubic feet dredged being Rs. 22.82.

The number of vessels surveyed by the Engineer-Surveyor was 287 under Act V of 1862 and 90 under Acts VIII of 1876 and VII of 1871. The total number of visits paid to them was 734. Only one vessel was measured for registry under the Merchant Shipping Act. Pending the issue of rules under the Inland Steam Vessels Act VI of 1884, and the Indian Steam-Ships Act VII of 1884, which came into force on the 1st December 1885, no certificates were granted under these Acts.

Surveys have therefore been made and certificates issued under Act V (B.C.) of 1862.

The number of cargo and passenger boats surveyed, registered, and licensed, and of manjees licensed, compares as follows with that of the previous year:—

			1885-86.	1884-85.
Cargo boats	5,913	5,989
Passenger boats	1,808	1,876
Manjees licensed	9,009	8,336

The working of the Commissioners' tramway appears to have been very satisfactory during the year. The receipts, which amounted to Rs. 1,60,443, were higher than those of any previous year except 1882-83, when they came to Rs. 1,60,549. In the past year, however, there was not the heavy jute crop of 1882-83, which brought a large traffic to the line; while, on the contrary, the rival competition between certain inland steamer companies caused such a reduction in freights as to induce importers to avail themselves of the river route. The breach in the Eastern Bengal State Railway line at Buggoolah caused by the extensive floods of September 1885, put a stop to all traffic by rail from and to the upper stations for some time, and the diversion of business thus caused lasted for some time after the breach had been repaired. The results of the working of the line were, on the whole, better than those of any preceding year. The expenditure was Rs. 2,956 less than in the past year, and Rs. 4,903 less than in 1882-83.

The income on account of port approaches, which amounted to Rs. 4,27,943 against Rs. 4,81,486 in the previous year, consisted mostly of contributions from the other parts of the Commissioners' account, the direct income being only a small sum derived from the earnings of the anchor-vessel, the sale of condemned stores, and a few other miscellaneous items. The expenditure amounted to Rs. 4,94,133 as compared with Rs. 3,99,853 in the previous year. The excess of expenditure was due to the provision of Rs. 80,000 on account of depreciation, and to the payment of a dockyard charge of Rs. 15,409 incurred in 1883-84. An expenditure of Rs. 13,620 was incurred for converting the survey vessel *Clyde* into a light-vessel to take the place of the *Mermaid*, which was destroyed by fire in February 1885. Exclusive of these items, the expenditure amounted to Rs. 3,85,104.

With the exception of the Nynan tracks, which have been very low since September 1885, there was no serious obstruction to navigation during the year. The formation of new bars and the shifting of old ones have, however, caused considerable anxiety.

Besides the survey of the channels in use from Kulpi to Saugor, together with the Saugor Roads and the Gaspar channel to the Bell buoy, a survey of the river from Calcutta to Chandarnagar was made during the year. The services of the Deputy Conservator and his staff were placed at the disposal of the Government for a re-survey of False Point Harbour, which was considerably altered by the cyclone of the 22nd September 1885.

The damage caused to the light-house at False Point by the cyclone has been completely repaired. The light was extinguished for a time on the night of the 4th December 1885 owing to the breakage of the pin of the lamp-valve; but instructions have been issued for the immediate lighting of another lamp in case of future accidents. The light-house at Saugor was inspected and found to be in good order. The light-house at Cowcolly is in need of repairs. These will be executed during the current year.

The new flashing lights were exhibited from the Eastern Channel, Pilots' Ridge and Mutlah light-vessels on the night of the 15th April 1885, and it was proposed to discontinue the burning of blue-lights, except at the Eastern Channel, during the south-west monsoon. In consequence, however, of the strong objections urged to this proposal by pilots and masters, it has been decided to continue to exhibit them every half-hour during the south-west monsoon, and every hour during the north-east monsoon at the Eastern Channel, and every hour at

the Pilots' Ridge. Certain modifications have also been made in the flashes of the Eastern Channel and Ridge lights.

In order to facilitate the export trade of the port, it has been resolved to continue the use of the Shalimar wharf and sheds for railway traffic, particularly for the storage of export cargo, at fixed rates, and to provide coolies for handling goods, and to run a steam-launch between Howrah and Shalimar during those months when the wharf and sheds at the latter place are occupied.

The petroleum wharf and depôt at Baj-Baj, the construction of which had been postponed for want of funds, were put in hand during the latter portion of the year, and have now been completed. They were opened for traffic on the 10th July 1886.

The following is a statement of the number and tonnage of vessels which visited the port during the year, compared with the corresponding figures of the previous year:—

DESCRIPTION OF VESSELS.	1884-85.		1885-86.		Increase.		Decrease.	
	Number.	Tonnage.	Number.	Tonnage.	Number.	Tonnage.	Number.	Tonnage.
European vessels trading with the United Kingdom	34	48,071	20	29,991	14	18,080
European vessels in foreign trade ...	29	22,413	33	26,690	4	4,277
Ditto in coasting trade	6	4,960	10	10,022	4	5,062
Chittagong vessels	48	8,595	63	8,850	15	261
Other native vessels	44	5,032	13	1,763	31	3,269
Narainganj inland trade	614	72,397	462	58,391	152	13,906
Mail steamers	104	56,597	103	60,641	3,044
Trading steamers	17	12,146	27	28,275	10	15,829
Ballam boats	1,947	28,097	2,125	32,631	178	3,934
Total	2,843	259,108	2,856	256,299	211	32,107	108	35,255

There was a considerable decrease in the number of vessels trading with the United Kingdom and those employed in the Narainganj trade; the causes of the decrease being a decline in the importation of salt from, and the exportation of jute to, the United Kingdom during the year. On the other hand, owing to a sudden rise in the exportation of rice, there was an increase in the number of other vessels visiting the port. Taking the year's statistics as a whole, there was a net increase of 13 vessels and a net decrease of 2,848 tons in the total tonnage, compared with the figures of the previous year.

The following abstract shows the quantity and value of the principal articles imported and exported during the past two years:—

			1884-85.		1885-86.	
			Quantity.	Value.	Quantity.	Value.
<i>Exports.</i>			Tons.	Rs.	Tons.	Rs.
Jute	53 164	61,88,602	48,951	54,70,413
Rice and paddy	Home ports	20,372	15,08,891	31,493	25,87,430
	Foreign ports	17,480	8,32,645	32,017	16,18,586
Total	37,852	23,41,536	63,510	42,06,016
<i>Imports.</i>						
Salt	22,527 Gallons.	3,62,802	9,878 Gallons.	1,57,342
Oil	903,358	4,01,312	259,253	1,38,867

Owing to the fall in the value of jute, a smaller quantity of it was exported than in the previous year. The shipments would have been fewer still were it not for the fact that, according to the prevailing practice which had been born of necessity, the vessels in which the jute was exported were specially chartered for Chittagong, and engagements had been entered into with them some time before hand. This is a drawback which must necessarily detract from the popularity of the port; but there is every hope of its disappearing as the port increases, and the advantages of its situation for the jute trade becomes more widely known. There is already an indication of this in the fact that during the past year several high class vessels put in at Chittagong

for charter. The rise in the exportation of rice during the year was due to an unusually large demand for this commodity from the West Indies, Mauritius, Ceylon, Madras, and Cochin. Salt and oil were not largely imported, as the supply already in hand, owing to excessive importation in the previous year, was more than the demand.

The total income of the port during the year amounted to Rs. 66,165-12-11, against Rs. 75,337-15-6, the total receipts of the previous year. The decrease was chiefly under "Pilotage collections," the decline in which was due to the stoppage of the levy of special pilotage. From the beginning of the current year the pilotage receipts and disbursements will be separated from the Port Fund accounts, and will form a distinct account. The question of making pilotage compulsory at Chittagong is still unsettled, and one of the grounds which have been urged in favour of the measure is that the receipts of the Pilotage Fund should be so far secured as to cover all possible charges against it. A sum of Rs. 1,226 was realised during the year on account of the water-supply. The scheme, the total cost of which has been put down as Rs. 12,806-14-9, has been in operation since January 1886, and in the three months of the past year, during which it was worked, the receipts amounted to nearly 10 per cent. of the total outlay.

The total expenditure of the port during the year amounted to Rs. 47,893-10-4, against Rs. 51,714-9-5, the total expenditure of the previous year, showing a decrease of Rs. 3,820-15-1, which was chiefly due to less work having been done for the port by the Dockyard during the year, to the absence of Military Department charges, and to the fact that no percentage was drawn by special pilots as in previous years.

Two new vessels, with a gross tonnage of 400 tons, were built during the year, against six vessels, with a tonnage of 1,022 tons, in the previous year. It is believed that the fall in the freight for the carriage of jute from Narainganj was the cause of fewer vessels being built. The jetty and moorings in the port were kept in good order, and the buoyage arrangements are satisfactorily reported on. The whistling buoy on the South Patch, which broke adrift in July last, was not recovered, and orders were given to replace it. The port boats were all well looked after.

The lights at Norman's Point and Kutubdea were repaired by the Public Works Department during the year. The defective character of these lights has more than once been commented upon, but the question of renewing them, and of supplying generally the wants of the port, must be deferred till the larger question of the formation of the Port Trust at Chittagong is finally decided. A Bill in connection with this measure is likely to be introduced at the next session of the Legislative Council.

Two accidents occurred to vessels in the port during the year, against eight in the previous year; neither of these were of a serious nature. In one case the pilot was found to be in fault and reprimanded. Two vessels were lost outside the port.

The health of the port was very much better than it was in 1884-85. There was only one death from cholera, and the admissions to hospital were fewer.

The following statement shows the shipping trade and income from port dues of the Orissa ports during the past three years:—

Orissa Ports.

NAME OF PORT.	Year.	ENTERED.		CLEARED.		Value of imports.	Value of exports.	Port dues.
		Vessels.	Tonnage.	Vessels.	Tonnage.			
						Rs.	Rs.	Rs.
False Point ..	1883-84	142	199,533	116	199,197	6,93,469	33,68,315	13,996
	1884-85	109	127,079	100	121,798	3,29,097	25,19,195	11,206
	1885-86	107	88,227	100	90,403	2,56,739	29,39,681	5,731
Puri ...	1883-84	38	56,786	38	56,786	2,12,529	6,72,599	1,972
	1884-85	32	18,572	32	48,572	17,871	7,92,361	2,731
	1885-86	22	25,397	22	25,397	21,310	3,54,320	1,147
Balasor ...	1883-84	310	78,855	351	80,190	65,89,110	45,46,801	2,581
	1884-85	416	102,612	480	105,788	89,86,192	65,50,661	3,329
	1885-86	461	111,036	487	125,791	85,36,125	55,86,266	4,013

During the year under review the ports of Orissa were visited by a most violent hurricane. A storm-wave swept the whole coast line from the mouth of the Devi river to the north of Balasor, wrecking a few ships and causing lamentable loss of life both at sea and on land. The trade suffered materially from this cause.

The receipts of the port during the year amounted to Rs. 6,422, and the charges to Rs. 6,644, against Rs. 11,900 and Rs. 8,936 in the previous year.

False Point.

In the arrivals there was a decrease of 20 steamers with 40,701 tons, and an increase of 18 sailing vessels with 1,949 tons as compared with the year before. There was a net decrease of two vessels with 38,852 tons. The decrease in the number of steamers was due to the cessation of the steamers of the British India Steam Navigation Company-calling at the port on their inward-bound voyages, and the increase in the number of sailing vessels was owing to the brisk export of rice to foreign ports.

The quantity and value of grain exported to foreign and home ports during the year amounted to 689,340 cwt. and Rs. 29,09,231 respectively, against 803,740 cwt. and Rs. 26,30,930 in the preceding year. There was thus an increase of Rs. 2,78,301 in the value of grain exported, notwithstanding a falling off in the quantity by 114,400 cwt. This result was due to the exportation during the year of a larger quantity of fine rice to foreign ports on account of high prices offered for it there. All items of import, except spices, considerably decreased owing to the diversion of the trade from the False Point route to that of Chandbally in Balasor. The falling off in the value of imports was, however, nominal, as opium imported to the value of Rs. 2,41,920 for the districts of Cuttack and Puri was omitted from the returns owing to the non-receipt of the requisite papers by the Collector.

The construction of new buildings to take the place of the Government offices and the officers' quarters, which were washed away by the storm-wave, was commenced, and a sum of Rs. 1,939 is reported by the Public Works Department to have been spent up to the close of the year. The harbour was resurveyed after the cyclone at a cost of Rs. 2,148-12-0, and a new chart, showing the results of the changes in the harbour, has been published. The buoys were overhauled and painted after the cyclone, and the mooring shackles, swivels, forelocks, and chains cleaned. Nine buoys were laid during the year in place of those washed away by the storm-waves. The flagstaff, which was blown down by the cyclone, will be erected again when the new buildings at the port are finished.

Five casualties happened to vessels during the year.

The receipts and expenditure of the port amounted to Rs. 1,147 and Rs. 1,190, against Rs. 2,731 and Rs. 2,149 in the previous year.

Puri.

The falling off in the receipts was due to the payment of port dues by four only out of the 16 steamers of the British India Steam Navigation Company which called at the port, the remaining 12 having paid the dues at False Point, through which they came.

There was a decrease of six steamers with 21,800 tons and four sailing vessels with 1,375 tons as compared with 1884-85. This was owing to the unfavourable state of the export trade, in consequence of the failure of crops in some parts of the district, and high prices prevailing on that account.

The quantity of grain exported to foreign and home ports declined from 244,870 cwt., valued at Rs. 7,91,528, to 1,04,080 cwt., valued at Rs. 3,54,270. The value of import rose by Rs. 3,436, the chief item being kerosine-oil. It is reported that people generally prefer it to the locally manufactured oil, on account of its cheapness.

The flagstaff was refitted, and new metalled laterite roads and foot-paths on the Puri sand above the beach leading to the port were made during the year.

Three casualties happened to vessels during the year.

The receipts, leaving out of account the Government contributions, amounted to Rs. 4,144 against Rs. 3,968, and the charges to Rs. 7,073 against Rs. 6,619 in the previous year.

Balasor.

There was an increase of 42 steamers with 17,787 tons and a decrease of 27 sailing vessels with 9,363 tons in the arrivals, and an increase of 36 steamers

with 26,868 tons and a decrease of 29 sailing vessels with 6,865 tons in the departures as compared with the previous year. The rise in the number of steamers and fall in that of sailing vessels were due to increased passenger traffic and decreased exports of rice.

The exports to foreign ports rose by Rs. 40,145, while those to home ports fell by Rs. 3,48,601, the net decrease being Rs. 3,08,456 as compared with the preceding year. This decrease was owing to the want of that commercial prosperity which was prevalent in 1883-84, when there was a full bumper harvest, and the partial failure of the crops in Bengal created a strong demand at high prices. The imports, which decreased by Rs. 4,50,067 as compared with the year before, were higher than in any preceding year.

The number of passengers that arrived and departed during the year was 73,084 and 64,691 respectively, against 69,462 and 62,982 in 1884-85.

The weekly, bi-weekly, and tri-weekly steam service between Calcutta and Chandbally continued as before, and a regular communication between Cuttack and Chandbally, *via* the Kendrapara canal, was maintained by small canal steamers running bi-weekly between those places. The steamers *Bassien* and *Pilot* continued running on the Balasor line during the year.

The only improvement was the construction of a floating jetty at the customs ghât in addition to the existing one, which is slightly damaged, but yet serviceable for steamer purposes. All the buoys were overhauled, cleaned, and painted, and the beacons, marks, and tide-gauges were all cleaned and painted. A strong wooden spar, 47 feet in height painted black and surmounted by a basket, was put on Shortt's Island in lieu of a bamboo beacon; and in addition to the old beacon at Balasor, a stout one three feet in height, surmounted by a basket, was also placed on Palm Tree Point.

The Jhota bar and the Chandipal and Celerity bars were in the same state as the year before, and there was the same depth of water over them.

There were no wrecks or casualties during the year.

IV.—PRODUCTION AND DISTRIBUTION.

Meteorology.

THE meteorological conditions of the year may, for the purposes of a general review, be best considered by dividing the year into four periods: first, the cold-weather season, or the months of January and February; second, the hot-weather period, consisting of March, April, and May; third, the south-west monsoon period, lasting from the end of May up till about the end of October or commencement of November; and finally the two north-east monsoon or cold-weather months of November and December, which close the year.

The chief features of the meteorology of January 1885 were that atmospheric pressure was in excess in all districts, and particularly in Behar and East Bengal. Usually an increased pressure is accompanied by decreased temperature; and in Behar and East Bengal, where the excess pressure was most clearly marked, temperature was distinctly below the normal for the period; but over the remainder of the province, temperature was decidedly above the normal. A decidedly deficient rainfall was reported in Orissa, South-west and East Bengal and Chutiá Nágpur; but in Behar and North Bengal the fall was practically normal. There was also a marked tendency for the southerly, or moist winds blowing from the Bay of Bengal, to set in at the southern stations much earlier than usual; and these winds during the last week of the month brought up considerable amounts of moisture. During January several considerable atmospheric disturbances occurred over Northern India, but only two of them were of sufficient intensity and area to affect the weather in Bengal, and these both gave rain to Behar, and the second also to the greater part of North Bengal.

The conditions in February changed somewhat, and a slightly deficient pressure was registered in Orissa, Chutiá Nágpur, and South-west Bengal, with slight excess pressure in other districts. Following, apparently, to a certain extent on the early setting in of moist winds at the southern stations at the end of January, there was in February a considerable increase in the frequency of slight disturbances in Orissa, South-west Bengal, East Bengal, and Chutiá Nagpur, which gave excess rainfall to Orissa, South-west and East Bengal, and slight excess to Chutiá Nágpur, while in North Bengal and in Behar rainfall was in defect. The increased precipitation of rain was accompanied with largely increased cloud proportion in all districts, though the dryness of the air was still considerable, and at the same time the heavier rainfall was accompanied by diminished temperature in all districts.

The usual rapid increase in the temperature of the province took place in March, the average rate of increase being nearly three degrees a week. This is shown by the fact that the average of all the records of maximum temperature in the province for the first week showed that the mean maximum temperature was 84·4°. In the second week the mean maximum temperature had risen to 87·0°, and for the third it was 90·3°, while for the fourth week in March the mean maximum temperature was

General summary for 1885.

Cold-weather period—January and February.

Hot-weather period—March to May.

93·1°. This is of course a very rapid increase indeed. The decrease of pressure which accompanies the increasing temperature was clearly noted in March; but the fall was scarcely so rapid as usual, and thus the average pressure for March was in slight excess in all districts. Temperature was decidedly below the normal in Orissa, though over the remainder of the province the variations from the normal were small. There was a comparative absence of the usual hot-weather storms, and those which occurred were only of slight intensity, and gave very little rain; and hence, though there was a slight excess rainfall in South Behar and Chutiá Nágpur, there was a slightly defective fall in North Bengal, and a decidedly defective rainfall in North Behar, Orissa, East Bengal, and South-west Bengal. The diminished rainfall was also accompanied by comparative dryness of the air in all districts.

The meteorology of April was of considerable interest; and while one set of conditions obtained up to the 22nd or 23rd, these conditions became completely reversed for the remainder of the month. For the first period winds were very strongly westerly over the whole province except in North and East Bengal, and rainfall was practically absent except for a few showers which were reported from North Bengal, and which were induced by a small area of low pressure, which developed in Behar and passed into North Bengal. With the continuance of the dry westerly wind current, fine dry very hot weather with high maximum temperature in all instances, ranging up to 109·7° at Bardwán on the 23rd, and almost complete absence of rain, were reported in almost all districts up till the 23rd. On this date the movements of the barometer became irregular, showing that conditions were becoming unsettled, and on the 24th a strong easterly current set in over North Bengal and North Behar and at some stations in South Behar. A considerable amount of inter-action then necessarily took place between the two wind systems, which was followed by an almost daily succession of the local hot-weather storms called nor'-westers for the remainder of the month, and which storms brought moderate amounts of rain to East Bengal, North Bengal, and South-west Bengal, smaller amounts to Orissa, while the rainfall over the remainder of the province was scanty.

In May during the first half of the month, easterly, south-easterly and southerly moist wind currents prevailed to a great extent over the province, and therefore conditions were similar to those of the last week of April, and the first ten days of May were characterised by the frequency of local storms or nor'-westers, which brought comparatively heavy rain. The moist winds were then slowly driven back by an advance of dry westerly winds, and with their advance the formation of storms and the probability of rainfall ceased. Towards the end of May, however, the moist southerly winds again began to advance, and showers became more frequent, particularly in East Bengal.

For the first five months of the year, or for what may be called the pre-monsoon period, the rainfall over the province generally was decidedly smaller than usual, not amounting to more than about three-fourths of the normal. In Orissa the fall was above the normal considerably, but in Behar and North Bengal the rainfall had been very deficient. The distribution of the rainfall for each month and for the five months is most clearly shown in the following table as a percentage of the normal fall for the period:—

Average rainfall in each meteorological division for the pre-monsoon months of 1885, expressed as a percentage of the normal fall for the period.

METEOROLOGICAL DISTRICT.	January.	February.	March.	April.	May.	Average rainfall of pre-monsoon months of 1885 compared with normal=100.
Orissa	0	410	62	44	118	122
South-west Bengal	0	186	41	62	66	72
East Bengal	63	177	63	95	87	89
North Bengal	214	34	92	59	62	63
North Behar	165	2	76	22	78	62
South Behar	87	36	123	16	51	57
Chutiá Nágpur	6	132	105	31	50	70
Average of Province	80	140	80	47	74	76

The general influence of the highly heated land surface of India in May began to draw the south-east winds across the equator, and from about the 18th to the 21st, strong monsoon winds began to blow at the Ceylon stations. This first northerly movement of the monsoon winds apparently advanced as far as the Nicobars, and it was followed by a short lull, and no further advance took place until the first week of June. At this time strong winds again began to blow in the centre and south of the Bay, and under the influence of the high temperature which then obtained in Bengal, and by a steady fall of the barometer over this area, which continued from the 5th up till the 8th of June, the monsoon winds advanced over East and North Bengal on the 7th and 8th of June, and gave in many cases excessively heavy rain. They then spread out in a westerly direction, giving the first general heavy rain to South-West Bengal and Chutiá Nagpur on the 11th and 12th, to North Behar on the 15th, and to South Behar and Orissa on the 16th and 17th of the month. The monsoon was therefore about a week later in establishing itself than in 1884.

The south-west monsoon set in over the province with about normal strength, and gave good general rain in all districts. In the latter half of June, two small and rather feeble barometric depressions were formed near the head of the Bay, the first of which passed through South-West Bengal into Chutiá Nagpur and thence into the North-West Provinces, and the second crossed the coast near Balasor, and then passed into Chutiá Nagpur, where it broke up. Rainfall in June was therefore very considerably in excess of the normal in Chutiá Nagpur. It was also slightly in excess in East, South-West and North Bengal, while Behar and Orissa only received about half their normal amounts.

In July the Bay of Bengal monsoon current continued fairly strong, and the Bombay branch of the current was apparently stronger than usual, and a very considerable amount of inter-action took place between the two currents, which produced very heavy rain in Behar and North Bengal. In July four feeble barometric depressions were formed—two over the Sunderbuns and two at the head of the Bay, one of which crossed the coast near Balasor, and the other to the south of False Point.

The rainfall in July was very considerably in excess in North Bengal, in decided excess in Behar, in about normal quantity in Chutiá Nagpur and South-West and East Bengal; but a decidedly defective fall was reported from Orissa.

A great increase in the strength of the monsoon seems to have taken place in August and September, and over the greater part of the province excessive rainfall was received during this period. In August in particular the heavy rainfall was to a great extent caused by a constant succession of feeble barometric depressions, which followed one another so rapidly that there was scarcely any marked interval of even diminished rainfall between them. No less than nine feeble depressions passed over the province in August—three were formed in Central Bengal and moved towards Chutiá Nagpur and South Behar; two were formed in South and South-East Bengal and passed through South-West and Central Bengal into Chutiá Nagpur; two were formed at the head of the Bay and passed through West Bengal into Chutiá Nagpur; one was formed off the Orissa coast, and also passed through Orissa into Chutiá Nagpur; and the ninth was a feeble depression formed over South Behar. As all these depressions brought heavy rain, South-West Bengal, South Behar, and Chutiá Nagpur received an excessive rainfall; North Behar and East Bengal also received falls in excess of the normal; Orissa received a normal fall; and North Bengal was slightly in defect. It will give some idea of the extraordinarily heavy rainfall in August, when it is stated that the fall in the Midnapur Division was from 22 to 23 inches in excess of the normal; in the Chittagong district it was 21 inches in excess; and in the 24-Pergunnahs, Bánkura, and Saugor Island districts the excess fall received was from 15 to 20 inches.

The rainfall in September was brought up by a fairly strong monsoon, which was also much helped by the indraught towards three depressions which passed over the province, and one of which remained persistently over parts of Central and Northern Bengal for several days. In addition, too, on the 22nd a small but extremely violent cyclonic storm passed through Orissa and

thence through Chutiá Nagpur into Behar; and this also brought up very heavy rain to the districts through which it passed, and indeed gave exceptionally heavy rain to Behar. In this month the rainfall was extremely largely in excess in Behar; it was also rather largely in excess in North, East and South-West Bengal, while it was about normal in Chutiá Nagpur and Orissa. Speaking generally, over the whole province the rainfall was about 33 per cent. in excess of the normal. As the rainfall of the two months August and September caused exceptionally heavy floods over large districts of the province, the time distribution of the rainfall in the various districts is of importance, and in the table below the rainfall for each of the weeks in these two months, in each meteorological division, is given as a percentage of normal fall for the period.

The actual rainfall in the meteorological districts expressed as a percentage of the normal fall of the period.

South Behar	143	105	202	235	220	237	53	209
Chutiá Nagpur	169	48	210	194	143	75	38	224

At the commencement of October the south westerly winds very rapidly fell off in strength, and though they gave fairly general rain to the province for the first two or three days, yet they practically ceased to give general rainfall to the province from about the 3rd, and the main part of the rainfall of October was brought up to Bengal by two barometric depressions, the first of which formed off Madras about the 10th of the month, and travelling parallel to the coast line just reached the Sunderbuns on the 14th and 15th, while the second was a diffused depression which passed across the west coast of the Bay in the neighbourhood of Vizagapatam, giving very heavy rain on that coast. Both of these depressions caused the conditions in Bengal to become very disturbed, and gave light general rain to the southern districts for some days. The rainfall in October was therefore below the normal in all districts, the fall in Behar and North Bengal being particularly scanty.

On the whole the south-west monsoon of 1885 was a strong one, though it was perhaps a little late in establishing itself, and though it fell off in strength very early and rapidly, and thus the close of the general rainfall brought up by it was also early. It was particularly strong in August and September, and also strong in July; but on account of its comparatively early close and commencement, the actual amount of rain received during the five monsoon months did not differ so largely from the normal as was generally thought, and thus for the whole of the five months—June to October inclusive—South-West Bengal received a fall which was 24 per cent. in excess of the normal, Chutiá Nagpur received a fall 22 per cent. in excess, South Behar a fall 19 per cent. in excess, while East Bengal, North Bengal and North Behar received falls rather less than 10 per cent. in excess of the normal. Only one district—Orissa—received a rainfall smaller than the normal during the monsoon months, and here the fall was only 79 per cent. of the usual quantity. The statistics of the south-west monsoon of 1885 may be best summarised in the form of a small tabular statement, where the rainfall for each of the months—June to October—for each meteorological division is given, the fall being expressed as a percentage of the normal fall for the period, and a sixth column of figures being added giving the total fall of the five months also expressed as a percentage of the normal fall for the period.

The average fall in each meteorological division expressed as a percentage of the normal fall for the monsoon period 1885.

METEOROLOGICAL DISTRICT.	June.	July.	August.	September.	October.	Average rainfall of the monsoon months of 1885 compared with normal=100.
Orissa ...	63	72	100	92	62	79
South-West Bengal ...	103	98	185	121	72	121
East Bengal ...	103	94	116	125	90	107
North Bengal ...	108	136	71	135	41	106
North Behar ...	56	112	106	172	12	104

Average of Province ...	93	102	127	133	62	109

At the close of October, north-east monsoon conditions obtained over the whole of the province, and these conditions were rather more strongly developed than usual, for they were being intensified by the occurrence of heavy rain on the Madras coast from Masulipatam down to Galle. At the commencement of November, however, the heavy rainfall along the Madras coast suddenly ceased, and a cyclonic storm was formed in the southern part of the Bay, which moved in a westerly direction and crossed the coast, about midway between Madras and Masulipatam, on the evening of the 2nd November. It would appear that the storm crossed the entire Peninsula without breaking up, though it was a large and by no means an intense storm. It affected the weather even in Bengal, and rain was received at most of the southern and at some of the western stations, and the rainfall was of course most marked in Orissa. A break therefore took place in the north-east monsoon conditions early in November up till about the 7th, when again northerly winds appeared; but on the 14th of the month again conditions became disturbed in the Bay, and shortly after a cyclonic storm of considerable size, and moderate or even very considerable intensity, was formed in the extreme south-west of the Bay. This storm, after its formation on the 15th, travelled in a most unusual course towards the north-east, until on the morning of the 23rd it struck the coast to the south of Chittagong and passed inland. During the advance of the storm, weather conditions in Bengal became disturbed over the whole province, but the rainfall brought up by the storm was to a great extent confined to East Bengal. After the storm had broken up again north-east monsoon conditions set in over the province. In November pressure was generally above the normal, and temperature below it, while rainfall was confined to that brought up by the two cyclonic storms, and thus, though rainfall was in slight excess of the normal in East Bengal and Orissa, it was almost entirely absent over the remainder of the province.

The meteorological conditions in December very closely resembled the normal conditions for the month, except that rainfall was decidedly more abundant than usual over the greater part of the province. The mean pressure was nearly equal to the average, the variations of the mean temperature from the normal were slight, while cloud proportion and humidity were generally in excess. The considerable rainfall was brought about by the fact that the province was visited by two disturbances, which had generated in Northern and Central India, and which extended in an easterly and southerly direction, so that the disturbed conditions reached Bengal and gave fairly general rain over a large part of the province, though the rainfall was heaviest in Chutiá Nagpur, Orissa, and South Behar. During December, therefore, rainfall was in considerable excess in Orissa, Chutiá Nagpur and Behar, in moderate excess in South-West Bengal, and in slight excess in North Bengal; while the only district which reported a slightly defective fall was East Bengal. With the exception of the two periods of disturbance from the 11th to the 14th and from the 18th to the 21st, when skies were heavily clouded, humidity high, and winds to a certain extent easterly, ordinary north-east monsoon conditions obtained for the whole of the month, and the sky was cloudless, temperature and humidity were low, and there was a steady northerly wind current blowing over the Province.

The above being a very general summary of the meteorological conditions of the year, it is still desirable to give a brief record of the changes and variations of the meteorological elements under the headings of pressure, temperature, humidity, cloud proportion, wind, storms and rainfall.

The mean pressure of the whole province for January was decidedly above the normal, the average excess being 0.055"; in February conditions were altered, and the excess was followed by a defect of only four-thousandths of an inch. In March again pressure became in excess by 0.04", and this was followed in April by a further oscillation, and in this month pressure was in defect by 0.012". In May a very considerable excess pressure was established, the mean excess being no less than 0.077", and it was probable that this excess pressure had the effect of retarding somewhat the commencement of the south-west monsoon. For the pre-monsoon months, therefore, pressure had generally been in excess of the normal by 0.031," which rendered it probable that the monsoon would have been lighter than usual—a supposition, however, which was not borne out by the facts. For the first two months of the monsoon period the variations of pressure from the normal were exceedingly small, being only a defect of 0.003" for June and one of 0.008" for July. In August, owing to a constant succession of barometric depressions, which were formed or passed over the province, pressure became in defect by 0.04"; but for the following three months pressure was in excess by about 0.03", while finally in December pressure was almost absolutely normal. It may thus be said that pressure was 0.026" in excess for the cold-weather period—January and February; 0.035" in excess for the three hot-weather months; only 0.001" in excess, or almost absolutely normal, for the south-west monsoon period, and 0.017" in excess for the north-east monsoon season—November and December. For the whole year, therefore, the mean pressure of the province has been in excess of normal pressure by 0.016".

The variations of temperature from the normal have been rather considerable throughout the year. January commenced by being decidedly warmer than usual, and the mean temperature for the month was 0.7° in excess of the normal. In February temperature was abnormally low, and in some cases temperatures of 5° lower than the normal were registered, though the mean temperature of the month for the whole province was only 2.8° below the normal. In March this defect had to a great extent disappeared, and the mean temperature was only 0.6° below the normal. For the following four months, temperature was in each case above the normal; but it was only in May that the excess was large, when it amounted to 1.2°. In August temperature fell 1.0° below the normal, and in September the defect was 0.6°; but in October and November temperature had risen above the normal, and in the former month the excess was 1.2°, while in the latter it had fallen to 0.5°. Finally in December the temperature was almost absolutely normal. It will be seen that these variations to a great extent compensate for each other, and for the whole year the mean temperature has therefore been almost absolutely normal, the variation being less than a tenth of a degree, though the variation is towards the side of defective temperature.

The humidity of the air has been, so far as the records can be trusted almost uniformly slightly smaller than usual until the close of the year. For the first six months of the year, certainly, the air was slightly drier than usual. During the two months—July and August—the condition of the air was almost normal; but the next three months there was again a slight deficiency in the humidity; while in December, owing to a rainfall much heavier than usual, the moisture in the air had perceptibly increased.

An almost opposite variation has taken place in the cloud proportion, and, out of the first nine months of the year, it was only in April and May that the sky was rather less clouded than usual. At the end of the year, again, out of the last three months, only October recorded cloud proportion smaller than the average, while the remaining two months showed a very distinct excess. It would therefore appear that cloud proportion has generally been decidedly larger than usual for the whole year.

The principal point of interest in the wind systems of Bengal during January was though the north-easterly monsoon current was on the whole a fairly steady one, yet at the close of the month there was a distinct tendency of the southerly moist winds to set in at the southern stations earlier than usual. In February the north-east monsoon winds were decidedly less steady than usual, and slight atmospheric disturbances were more frequent, and these caused the wind system also to be disturbed, and during the periods of disturbance winds became more or less easterly. In March, with the commencement of the hot-weather conditions, winds became more southerly and south-westerly, though there was in this month a rather distinct prominence of the westerly element in the wind directions, which caused comparative dryness of the air and absence of hot-weather storms. This prominence of westerly winds over the province continued up till about the 23rd of April, and from this period a complete change in the wind systems took place, and wind became easterly and south-easterly over a large part of the province. This strong easterly current continued to blow, giving disturbed weather and many local storms, up till nearly the middle of May, when it was gradually driven back by a dry westerly wind current, which remained a prominent feature in the meteorology of the month until quite its close, when southerly and south-easterly winds again set in, which shortly afterwards ushered in the rainy season. During the rainy season the wind directions were almost of normal character, and the velocities were fully up to or rather above the normal till quite the end of September. At this time and the beginning of October, the monsoon current blowing over Bengal commenced to slacken rapidly, and the ordinary transition conditions between the retreat of the south-west monsoon and the advance of the north east monsoon, during which winds are light and variable, obtained over the province until about the 25th of October, when northerly and north-westerly winds set in over the whole province, and cold-weather conditions obtained. This is decidedly early for the setting in of these conditions; but during November the steady northerly winds were disturbed by the existence of two cyclonic storms in the Bay, and the north-easterly monsoon current in November was not so steady as usual. In December also the steadiness of the northerly current was interfered with by the existence of two periods of disturbance, and on the whole for the two months—November and December—the northerly current was wanting in steadiness and in force.

The most noticeable storm of the year was a small but extremely violent cyclone, which was generated to the north-west of the Andamans on September 18th and 19th, and which travelled rapidly in a north-westerly direction crossing the Orissa coast on the morning of the 22nd September, and then passed through Orissa, and thence through Chutiá Nágpur into Behar, when it apparently broke up on reaching the hills to the north of Behar. It gave very little warning of its formation, and no certain warning of the direction of its movement, or of what precise part of the coast it was approaching. The centre of this storm passed over False Point at about 6-30 A.M. on the 22nd, and by its violence, and by the severe storm-wave by which it was accompanied, did much damage and caused much loss of life at that station and in other parts of Orissa. The storm was decidedly small, the whole diameter of the storm where the wind force amounted to a strong gale being only about 100 miles, while the central calm was only about 6 to 9 miles across. It was accompanied by excessively low pressure, and 27.2 inches was recorded at the False Point observatory at the time of the central calm—a pressure which has rarely been recorded in such cases.

A number of smaller cyclonic storms occurred during the prevalence of the south-west monsoon over the Bay, the majority of them being generated over the sea area, but a few of them were formed over the land. These storms were about 23 in number, viz. 2 in June, 4 in July, 9 in August, 4 in September, 2 in October, and 2 in November. The majority of them were more or less feeble, and in most instances only gave heavy rain; but a few gave rise to strong winds and bad weather. The following is a list of all those which are known to have occasioned rather high wind and rough sea in the Bay:—

Storm of June 15th, to 19th.—This was a comparatively feeble storm, but it remained almost stationary for some time, the centre moving slowly

from the north-east corner of the Bay over the Sunderbuns to the north or and north-west of Midnapur, until it reached the Chutiá Nágpur hills, where it broke up. During its passage onward, heavy rain fell over South Bengal and Orissa, and the influence of this depression was felt so far as Gopalpur. The sea along the west coast of the Bay up to this station was very rough.

Storm of June 25th to 27th.—This depression was formed at the head of the Bay, or over the Sunderbuns, a little to the east or south-east of Saugor Island. It moved slowly towards the Balasor coast and then passed inland. Heavy rain accompanied the advance of this small storm. Fairly strong winds were also reported, the wind velocity at Saugor Island being 32 miles per hour on the 27th.

The False Point cyclone before alluded to.

Storm of October 12th to 15th.—It formed off the Madras coast about the 10th, and, travelling parallel to the coast line, just reached the Sunderbuns on the 14th and 15th, and then broke up.

Storm of November 1st to 3rd.—The weather became unsettled in the south of the Bay off Negapatam on the 1st. These conditions developed into a cyclonic storm of moderate intensity, which reached the coast between Madras and Masulipatam on the 3rd, and passed inland in a northerly or north-westerly direction. The disturbance was rather large and diffused, and the whole of the western stations of the coast area were affected by it.

Cyclone or cyclonic storm of November 14th to 23rd.—The first intimation of the cyclone was received from the unsettled condition of the weather at Diamond Island on the 14th. The cyclone appears to have gradually formed off the Ceylon coast between Trincomalee and Negapatam on the 17th. The storm then travelled slowly northwards, and its centre was off the coast between Madras and Negapatam at 10 A.M. of the 18th. It progressed slowly in a north-easterly direction on the 19th, and moved towards the Arracan coast, and the storm was opposite Akyab at 10 A.M. of the 22nd, and on the morning of the 23rd it passed inland to the south of Chittagong, where it broke up.

In January rainfall was entirely brought about by the depressions which drifted from Northern India. A few showers were reported about the 10th, a few more on the 16th.

Rainfall.

but the next general rain occurred on the 28th and 29th, when almost every station in Behar and almost all in North Bengal received rain. The districts of Orissa, South-West Bengal, and East Bengal averaged only a twentieth of an inch of rain in this month, while the other districts received about three or four-tenths of an inch of rain.

In February rainfall was decidedly more frequent than usual, and Orissa, South-West Bengal, and East Bengal received about two and three inches of rain, Chutiá Nágpur about an inch, North Bengal and South Behar about a quarter of an inch, while in North Behar rainfall was practically absent.

In March rainfall was confined to a few broken periods only. There were a few showers on the first four days of the month in South-West, East and North Bengal, Behar and Chutiá Nágpur. A few showers fell in Orissa on the 10th and 11th, and rainfall again occurred on the 15th to the 17th; but from the 26th to the end of the month moderate amounts of rain fell in South-West, East and North Bengal, and Chutiá Nágpur. North and East Bengal received from about one to one and-a-half inches of rain, while the remainder of the province received an average of about half an inch.

In April rainfall was to a great extent absent up till the 25th, when a succession of hot weather storms set in over Orissa, South-West Bengal, East Bengal, North Bengal, and to a certain extent in Chutiá Nágpur; so that in this month East Bengal received nearly four inches of rain, South-West Bengal and North Bengal about an inch and a half, and Orissa two-thirds of an inch, while very small amounts fell in the other divisions.

In May rainfall was largely deficient in all districts except Orissa, which received an excess fall. The largest defects in May were reported from the eastern stations of East and North Bengal. A very large and important area in which there was a defective rainfall of from two to four inches included almost the whole of the Rungpur, Dinagepur, Rájsháhí, Bogra, Pabná, Maldah, Murshidábád, Santál Pergunnahs, Bírbrhúm, Nadiyá, and Bardwán districts, and parts of the Húglí, Midnapur and 24-Pergunnahs districts.

Also Gopalganj in Sarun, Singbhúm, Khulna, and Nattore showed defects varying up to four inches. In May East Bengal reported between eight and nine inches of rain, North Bengal and Orissa about five inches, South-West Bengal three and a half, North Behar two inches, and South Behar and Chutiá Nágpur about an inch.

In June the rains set in a little later than usual, and thus rainfall was below the average in parts of the province. On the other hand, there was a considerable excess rainfall in Chutiá Nágpur, and a slight excess over South-West, East and North Bengal. Compared with the normal fall, the eastern and northern districts in many cases showed a large excess, and at certain stations in North Bengal there was an excess of from ten to fifteen inches. The southern parts of South West Bengal, including parts of Bánkura, also showed distinct excess rainfall, varying in some cases up to as much as ten inches at Satkhira, while the whole of Chutiá Nágpur was decidedly in excess, the average excess being from 4 to 5 inches.

Assuming that when the difference between the actual and the normal rainfall is less than 10 per cent. either in excess or defect of the average, the rainfall may be considered normal, then the rainfall for June was normal in the following districts:—Midnapur, 24-Pergunnahs, Howrah, Bardwán, Bánkura, Nadiyá, Jessor, Chittagong, Noakhaly, Maimansingh, Bogra, Jalpáiguri and Mámbhúm. In the districts of Khulna and Pabná the rainfall was between 10 and 20 per cent. in excess, and in the following districts the fall was more than 20 per cent. in excess:—Farádpur, Dacca, Commillah, Rungpur, Cooch Behar, Hazáribágh, Lohárdagá and Singbhúm.

In the following districts the rainfall was more than 10 and less than 20 per cent. in defect:—Húglí, Bírbbhúm, Bákarganj, Rájsháhí and North Bhagalpur; and the defect was from 20 to 40 per cent. of the normal in Balasor, Murshidábád, Maldah, Dinagepur, Sháhábád, Gayá, South Bhagalpur and Santál Pergunnahs. In the districts of Cuttack, Purneah, Durbhanga, Muzaffarpur, Champáran, Sarun and Monghyr the fall was from 40 to 60 per cent. in defect; and lastly in Purí and Patná districts the defect was more than 60 per cent. of the normal fall.

In July rainfall was in excess in North Bengal and in Behar, while it was in defect elsewhere, the defect being large only in Orissa; compared with the normal fall, and considered in the same way as in the rainfall for June, the following districts received a normal rainfall in July:—Cuttack, Bardwán, Bánkura, Bírbbhúm, Murshidábád, Nadiyá, Bákarganj, Noakhaly, Maimansingh, Pabná, Bogra, Purneah, Sarun, Gayá, Patná, Monghyr, South Bhagalpur, Lohárdagá and Mámbhúm. The following districts received falls between 10 and 20 per cent. in excess of the normal:—Húglí, Chittagong, Rájsháhí, and Hazáribágh, and the following an excess of between 20 and 50 per cent.—Midnapur, Jessor, Rungpur, Cooch Behar, Dárjiling, Durbhanga, Muzaffarpur, Champáran and Santál Pergunnahs; and in the following districts the excessfall exceeded 50 per cent of the normal fall:—Maldah, Dinagepur and Jalpáiguri.

On the other hand, defects of between 10 and 20 per cent. of the normal fall were registered at the districts of Balasor, Howrah, Khulna, Farádpur, Dacca and Sháhábád, and defects of from 20 to 50 per cent. in the following districts:—Purí, 24-Pergunnahs, Commillah, North Bhagalpur and Singbhúm.

In August there was a great increase in the strength of the monsoon current, and except in parts of Orissa and of the northern divisions of the province, every district received an extremely heavy rainfall. The exceptionally heavy nature of the rainfall may be indicated by saying that in the Midnapur district the average rainfall was 35·27 inches, against the normal 12·73 inches; in the 24-Pergunnahs the average fall was 28·04 inches, against the normal 12·28 inches; in the Bánkura district it was 27·11 inches, against 12·23 inches; in the Bardwán district 19·48 inches, against 11·93 inches; in the Hazáribágh district 23·34 inches, against 12·53 inches; and in the Singbhúm district 20·58 inches, against 13·92 inches. Finally, in the Chittagong district, the average rainfall was 42·58 inches, against the normal 21·62 inches.

Compared with the normal, in Orissa the Purí district showed a defect of 29 per cent., and the Cuttack district one of 10 per cent. The Balasor

district, on the other hand, was in excess by 23 per cent. In South-West Bengal every district showed a large excess fall, the smallest excess being 18 per cent. in the Bírblhúm district; while in the Húglí and Midnapur districts the excess was about 150 per cent. of the normal. In East Bengal, Commillah showed a slightly defective fall, while Maimansingh received only half its normal amount: the other districts received excess falls, varying from a third up to more than half the normal quantity. In North Bengal, Rájsháhí and Pabná showed slight excess falls, while all other districts showed considerable defects. In North Behar, Champáran and Sarun showed large excess falls, and other districts falls somewhat in defect. Finally, in South Behar and Chutiá Nágpur generally in all districts the fall was about half as large again as the normal.

In September, again, rainfall was generally largely in excess, and compared with the average fall, and considering that a variation of 10 per cent. in excess or defect is a normal fall, in this month the following districts received an average rainfall:—Cuttack, Balasor, Howrah, and Jalpáigurí; the following districts received falls in defect varying from 10 to 20 per cent. of the normal:—Midnapur, Noakhally, Cooch Behar, and Mánbhúm; while the following districts received falls between 20 and 50 per cent. in defect:—Púrí, 24-Pergunnahs, Húglí, and Singbhúm.

On the other hand, the following districts received falls between 10 and 20 per cent. in excess of the normal rainfall for September:—Bardwán, Jessor, Chittagong, Farídpur, Rungpur, and Sháhábád; and in the following districts the rainfall was from 20 to 50 per cent. in excess:—Bánkurá, Bírblhúm, Nadiyá, Khulna, Murshidábád, Bákarganj, Dacca, Bogra, Rájsháhí, Purneah, North Bhagalpur, Sarun, Hazáribágh, and Lohárdagá. In the following districts the fall was between 50 and 100 per cent. in excess of the normal:—Commillah, Maimansingh, Pabná, Maldah, Dinagepur, Champáran, Gayá, Patná, Monghyr, and Santál Pergunnahs; while rainfalls in excess by more than 100 per cent. were received in Durbhanga, Muzaffarpur, and South Bhagalpur.

In October, owing to the early close of the monsoon, rainfall was in considerable defect in all divisions of the province, the defect varying from very small amounts up to between three and four inches in North Bengal and North Behar. In a few small districts rainfall was above the normal, such as in Nadiyá, Noakhally, Farídpur, Maimansingh, Pabná, Jalpáigurí, Lohárdagá, and Singbhúm; but, on the other hand, defects of between 50 and 90 per cent. of the normal fall were very common.

In Orissa the defects varied from 29 per cent. in the Cuttack district to 64 per cent. in the Balasor district. In South-West Bengal the divisions were all in defect except Nadiyá, and the defects varied from 17 per cent. in the Jessor district to 54 per cent. in the Khulna district. In East Bengal there were, as stated before, three districts which received an excess fall, but the districts in defect varied from 7 per cent. in Bákarganj to 26 per cent. in Dacca. In North Bengal the divisions were all in defect except two, and the defects ranged from 50 per cent. in Bogra up to 92 per cent. in Dinagepur. In North Behar the smallest defect was 78 per cent. of the normal, and the largest 95 per cent. in North Bhagalpur. In South Behar the smallest defect was 59 per cent. in the Santál Pergunnahs, and the largest 93 per cent. in Gayá; while finally in Chutiá Nágpur the two districts Lohárdagá and Singbhúm received excess falls, Mánbhúm was in defect by 9 per cent., and Hazáribágh by 61 per cent.

In November rainfall was practically confined to Orissa, which received an average of 1·34 inches under the influence of one of the storms previously described, and to East Bengal, which received 1·58 inches under the influence of the last cyclonic storm described under the heading of storms. In these two districts rainfall was therefore in excess, but in all other districts there was a marked defect; while in North Bengal and Behar absolutely no rain was received.

In December rain was received in excess in all districts except East Bengal. In Chutiá Nágpur there was an average excess rainfall of 2·07 inches, in South Behar the excess rainfall was 1·57 inches, in Orissa the excess was 1·08 inches, in North Behar 0·90 inch, and in South-West Bengal 0·49 inch. The excess in North Bengal was very small, being only 0·16 inch, and similarly the defect in East Bengal was small, being only 0·18 inch.

The system of meteorological observation established in 1833-84 for the extension and development of provincial meteorological reports has been steadily followed. The only change of importance which has taken place in the administration of the Department during the year 1885-86 was the reduction of some of the observatories of the second class, viz., Sibsagar, Bankipur, Hazáribágh, Cuttack, and Chittagong, to the class of third-class observatories. The above stations have now furnished more than ten years' complete registers of hourly observations on four days of each month. A good knowledge having thus been obtained of the diurnal changes of the various meteorological elements, the Meteorological Reporter to the Government of India has thought it desirable to suspend the registration and reduce these observatories to third-class stations from 1st January 1886, in order that the money saved by the reduction may be more profitably employed in extending meteorological work in other directions. The records of the self-registering wind instruments will, however, be continued at Chittagong, Hazáribágh, and Cuttack, and at Sibsagar those of the Seismic instruments also. The imperial third-class observatory at Tezpur in Assam, and the two provincial third-class observatories at Maldah and Krishnagar in Bengal, the establishment of which was sanctioned last year, were started during the year under report. The voluntary observatory at Bnákurá, to which reference was made in last year's report, began to send in returns to the Bengal Meteorological Office from June 1885.

The original number of imperial and provincial observatories in Bengal and Assam at the commencement of the year 1885-86 was one first class, seven second class, sixteen third class, and twenty-two provincial third class; but by the change in the class of some of these stations from the 1st January 1886, as noticed above, and by the addition of the three provincial and one imperial observatories, they will in future be classed as follows:—

- 1 First class,
- 2 Second class,
- 21 Third class, and
- 25 Provincial third class.

First-class observatory.—*Alipur Observatory*.—This observatory is at Alipur, and is under the direct superintendence of the Meteorological Reporter to the Government of India.

Second class observatories.—These are at Dhubrí and Saugor Island. Both were inspected during the year. The Saugor Island observatory was generally in good condition, but the working of the Dhubrí observatory was far from satisfactory.

These are 14 in Bengal, 1 (Akyab) in Burmah, 4 (Sibsagar, Silchar, Tura, and Tezpur) in Assam, and 2 (Gopalpur and Coconada) in Madras. The two last are maintained in connection with the Bay of Bengal storm signal service. Only four observatories of this class are provided with anemographs, viz., Hazáribágh, Dárjiling, Cuttack, and Chittagong.

Eight observatories were inspected during the year, viz., Gayá, Bankipur, Hazáribágh, Dacca, Dárjiling, Durbhanga, Jessor, and Purneah, and in all, except Gayá, Jessor and Dacca, the instruments were found to be in perfectly good order. The rest of the observatories were not inspected, but the returns received from them were satisfactory.

These are 25 in number, of which 11 were inspected during the year. With the exception of Farídpur and Maimansingh, the stations are said to have done generally satisfactory work.

The earthquake in July 1885 caused considerable damage to instruments at some of the Northern Bengal stations. The anemometers and wind-vanes at Rungpur, Sirárganj, and Maimansingh were thrown down from the pillars on which they were erected and were badly injured. The barometer at Bogra was buried under a heap of ruins in the Circuit-house, but it was fortunately not much injured. The wind-vane and the anemometer at Bogra were rescued before the building came down. The instruments had therefore to be removed to the zilla school building.

The number of stations reporting rainfall in 1884-85 was 172, and during the year 1885-86 this number was increased to 214 stations. Satisfactory returns are now received from the great majority of the stations, and the rainfall registration of the province is being carried on with fair accuracy and with considerable punctuality. The rainfall station of Hookitolla was swept away by the storm of 23rd September, and the rain-gauge at Jajpur was blown over. The former station remains therefore suppressed, but the rainfall registration at the latter was resumed from the 27th October 1885.

The Bay of Bengal reports of the storm signal service were published every day without any break during the year. The arrangement under which the report forms were applied last year by the Survey of India Department, Lithographic Branch, was continued this year also. There has been no change in the number (20) of the reporting stations over the Bay area. The telegrams were received very regularly from almost all the stations. This report was supplied to 39 Government officers and 22 subscribers, paying at the rate of Rs. 2 a month. The receipts from subscribers during the year covered the cost of printing the reports and of distributing them.

The Bengal Daily Weather Reports were published last year during the period 20th April to 7th November. The number of stations which furnished observations for this report during the year was 37, against 32 of the preceding year. These reports were published and issued to 99 Government officials and 19 subscribers, as compared with 101 officers and 3 subscribers during the previous year. Most of the new subscribers were mercantile firms.

Weather, Crops, and Prices.

The following is a brief account of the results of the harvests, of the prices prevalent, and of the economic condition of the people in the several divisions during the year 1885-86.

The subjoined table shows the rainfall in each district of the Bardwán Division during the year, as compared with the previous two years :—

			1883-84.	1884-85.	1885-86.
			Inches.	Inches.	Inches.
Bardwán	57·28	42·91	62·22
Báńkurá	52·24	46·93	71·99
Bírbhúm	54·63	41·11	57·35
Midnapur	51·99	58·54	80·20
Húglí	50·07	49·87	72·90
Howrah	50·92	56·42	65·06

The rainfall was generally abundant, but unevenly distributed. In the earlier months sowings both of *aus* and *aman* rice were retarded for want of moisture, but full amends were made later on; and had it not been for the damage done by the August floods, bumper harvests would have been secured throughout the Division. In Bardwán both *aus* and *aman* yielded full average crops, except in the Cutwa subdivision; in Báńkurá the outturn is characterised as “splendid,” and in Bírbhúm the harvest is estimated at very slightly below the average. Three-fourths of the district of Midnapur derived benefit instead of harm from the heavy rain of August; in the Sudder subdivision the outturn was above the average, and everywhere else fair results were obtained, except in Ghatal, where the *aus* harvest suffered considerably, and is said to have been only five annas. This was, however, in great measure compensated by a bumper crop of *boro* rice. The Sudder and Serampore subdivisions of Húglí reaped a 12-anna rice crop, and in the unflooded tracts of Jahánábád it was a bumper. But in the parts exposed to the floods the whole crop was lost, the damage being but partly made up by very extensive cultivation of cold-weather crops. Howrah having lost a very large proportion of its winter rice, recouped itself to some extent by a good crop of *boro*.

The following table compares the average prices of rice and wheat in each district during the year with the figures of the preceding two years :—

DISTRICTS.				1884-85.		1885-86.	
				Rice per rupee.	Wheat per rupee.	Rice per rupee.	Wheat per rupee.
				S. c.	S. c.	S. c.	S. c.
Bardwán	19 8	17 2	15 2½	16 8
Báńkurá	21 11½	14 2	17 5½	15 13
Bírbhúm	19 13	16 6	16 5	16 14
Midnapur	22 8	11 8	18 1½	18 0
Húglí	18 3½	13 10	15 4	15 8
Howrah	17 5½	13 6	15 11½	14 14

In Bardwán, Báńkurá, and Bírbhúm the price of rice was high, owing to the prevalence of scarcity during the earlier part of the year, but this was compensated by a falling off in the latter part in consequence of the improved prospect of the crop. In Húglí, Howrah, and Midnapur the rise is attributable to the loss of the crop caused by the floods.

The wages of labour generally remained almost stationary except in the famine-stricken tracts, where the rate was rather below the average. In Húglí

and Howrah the demand for skilled labour greatly exceeds the supply ; but as large number of lads are being trained in the various factories, gradual progress in this respect is anticipated.

The people were badly off in the districts of Bardwán, Bánkura, and Bírghúm during the first half of the year, and the relief operations which had to be undertaken in some places were continued until the month of November ; but the good outturn of the rice crop placed them in better circumstances before the year closed. In Midnapur and Húglí there was considerable suffering in the flooded tracts, and the condition of the weaver caste, which has been very much depressed for some years past, is said to have still further deteriorated ; the rest of the population suffered no permanent change for the worse. In Howrah, owing to the ready market for produce of all kinds and the brisk demand for labour, even the floods—exceptionally disastrous as they were in this district—appear to have but a slight effect on the condition of any class of the population.

The following table gives the average rainfall in each of the districts of the Presidency Division during the year, as compared with the average fall of the preceding five years :—

Presidency Division.

				Average of five years (1880-81 to 1884-85).	1885-86.
				Inches.	Inches.
24-Pergunnahs	63·62	68·72
Nadiyá	53·58	64·41
Jessor	57·93	65·82
Khulna	71·64	74·97
Murshidábád	47·31	53·62

The rainfall was above the average of the preceding five years in all the districts of the Division ; but, except in Khulna, the fall was not well distributed, and the crops suffered alternately from drought and flood. In the 24-Pergunnahs the season began well, but transplantation of rice was retarded by an insufficient rainfall in July, while the August downpour was so heavy as to swamp large areas of the young crops. The total outturn, however (except in the tract affected by the September floods), is reported to have been nearly up to the average. In the small portion of Nadiyá that was unaffected by the floods, the outturn of *aus* paddy was good, and throughout the district the soil, enriched by alluvial deposit left by the inundation, yielded excellent cold-weather crops. The cultivation of wheat is rapidly expanding in this district, and received a special stimulus from the loss of the winter rice in the year under review. Of the subdivisions of Jessor, Magurah and Narail reaped good crops of winter rice, but lost most of the *aus* crop ; while in the Sudder subdivision and in Bongong the floods had the reverse effect, destroying most of the *amun*, but only slightly injuring the *aus*. In Jhenidah, in spite of the inundations, the year is characterised as exceptionally prosperous. In Murshidábád the distribution of the year's rain was very unfavourable to the crops, the whole of the *aus* paddy being destroyed by flood, while the yield of *amun* was up to the average only in the Kandi subdivision. Khulna enjoyed well-timed as well as plentiful rain ; the floods affected only a small portion of the Satkhira subdivision, and everywhere else the crops were excellent.

The following table shows the average prices per rupee of rice and wheat in the districts of the Division during the year, as compared with the previous year :—

DISTRICTS.				RICE.		WHEAT.	
				1884-85.	1885-86.	1884-85.	1885-86.
				S. c	S. c.	S. c.	S. c.
24-Pergunnahs	15 4	14 2	14 7½	14 10½
Nadiyá	14 0½	14 15	17 11½	16 13
Jessor	15 10	15 12	15 0½	15 0
Khulna	16 12	14 10½
Murshidábád	14 13½	15 12	18 1½	15 12

The prices of food-grains, which had been high during 1884-85, rose still higher in 1885-86; but in Nadiyá and Murshidábád the average price of rice is reported to have been somewhat lower than in the preceding year.

There was no change in the wages of labour except in the 24-Pergunnahs, where they are reported to have been on the increase. In this district, especially in the neighbourhood of the metropolis, the numerous mills, factories, presses, &c., pay high rates for labour.

The condition of the people during the year was not, on the whole, very favourable. It was affected by the floods to a more or less extent in every district, and in Murshidábád and Nadiyá depression had been caused by drought in previous years.

The following table shows the average rainfall registered at the different registering stations in the Rájsháhí Division during the year, as compared with the average fall of the preceding five years:—

		Average of five years (1880-81 to 1884-85).		1885-86.
		Inches.		Inches.
Dinagepur	55.58	60.86
Rájsháhí	52.62	60.19
Pabná	57.88	68.94
Bogra	55.79	58.27
Rungpur	74.45	77.31
Jalpáiguri	137.17	142.61
Dárljiling Hills	109.16	129.8
Ditto Terai	113.77	95.87

Though the fall of rain came a little late in some districts, it was sufficient and well distributed. The *aus* and *aman* rice crops, which are the staples of the Division, were generally good, except the former in the district of Rájsháhí, where it sustained a heavy loss from the floods. Jute, which is the next crop in importance, was somewhat deficient. The cold-weather crops and sugarcane were indifferent in Rájsháhí, but elsewhere they were fair. Tobacco was a good average crop in Rungpur. There was a marked decline in the cultivation of ganja on account of low prices in the previous two years.

The prices of food current in the several districts were—

DISTRICTS			COMMON RICE.		PUSES.		WHEAT.	
			Average quantity per acre in Rájsháhí.	Average quantity per acre in the other districts.	Average quantity per acre in Rájsháhí.	Average quantity per acre in the other districts.	Average quantity per acre in Rájsháhí.	Average quantity per acre in the other districts.
1	2	3	4	5	6	7	8	9
	S.	C.	S.	C.	S.	C.	S.	C.
Dinagepur	17 3	22 1	17 1	15 14	13 8	13 9
Rájsháhí	16 11	21 5	18 0	21 8	17 1	18 1
Pabná	16 4	22 1	19 8	20 1	17 8	19 10
Bogra	19 1	25 1	18 7	17 11	15 11	17 11
Rungpur	16 9	19 13	12 0	11 5	17 8	16 3
Jalpáiguri	17 9	18 4	10 12	10 4	12 11	9 14
Indian corn.								
Dárljiling	12 10	12 5	19 0	20 6
Terai	14 6	15 12	20 0

The prices, though still high, were lower than in the preceding year, and there was a slight rise in the wages of labour.

There is a general agreement among the district officers that the year was marked by exceptional prosperity. Debts and arrears of rent were paid, and there was an unusual number of marriages.

The subjoined table shows the rainfall in the several districts of the Dacca Division during the year, as compared with the preceding two years:—

Dacca Division.				1883-84.	1884-85.	1885-86.
				Inches.	Inches.	Inches.
Dacca	58.54	61.04	69.38
Farídpur	50.92	57.42	73.38
Bákarganj	68.64	97.52	90.38
Maimansingh	63.62	86.04	79.65

The rainfall was sufficient, and on the whole well distributed, though in some parts of the Division, notably in Farídpur and Maimansingh, floods were caused by excessively heavy rain in June, and the subdivision of Bhola in Bákarganj suffered to some extent from an unusually copious fall in September. In Dacca the *aman* crop was a bumper one in the Manickganj subdivision, but the outturn in the other three subdivisions varied from 10 to 12 annas. The crop was very full in Farídpur, and quite up to the average in Maimansingh and Bákarganj. The less important *aus* crop was not so good, as it suffered more or less from excessive rain, especially in Farídpur. Of other important crops, jute did well in Farídpur, but not so well in Dacca; sugarcane was below the average in Farídpur, while betel-nuts were plentiful and cocoanuts sufficient in Bákarganj.

The following statement shows the average price of common rice during the year, as compared with 1884-85:—

				1884-85.	1885-86.
				S. c.	S. c.
Dacca	15 7	15 8
Farídpur	15 13	16 1
Bákarganj	17 3	13 13
Maimansingh	14 10	15 4

There was thus very little change from the high prices of the previous year, and in Bákarganj the rate even increased.

The price of labour began to increase in this Division in 1883-84, and advanced very greatly in 1884-85. The wages of the latter year were maintained throughout 1885-86, owing to the prosperity of the lower classes and the brisk demand for labour of all kinds.

There was no diminution in the prosperity of the agricultural classes, who are exceptionally well off in this Division, especially in Bákarganj and Maimansingh; but there is a considerable population of young men who have received a certain amount of English education, living in idleness, supported by their not very wealthy relatives.

The table below compares the rainfall of the year at the head quarters of each district of the Chittagong Division with the figures of the preceding year and the average fall of previous years:—

						Inches.
Chittagong—						
1885-86	118.27
1884-85	105.64
Average 26-30 years	104.59
Noakholly—						
1885-86	117.43
1884-85	116.05
Average 26-28 years	112.01
Tipperah—						
1885-86	103.85
1884-85	99.03
Average 27-28 years	93.12
Hill Tracts—						
1885-86	76.56
1884-85	74.40
Average 16 years	97.89

The rainfall of the year was above the average in all the districts except the Hill Tracts, and was, on the whole, well distributed throughout the Division. The rice crop was generally fair, but the jute in Tipperah and the cold-

weather crops in Noakholly and the Hill Tracts were inferior. Betel-nut, which is a very important product of this Division, yielded almost an average outturn in Noakholly and Tipperah.

As shown below, the high prices of rice which ruled in 1884-85 remained almost unchanged during the year under report:—

				Quantity per rupee.	
				1885-86.	1884-85.
				Seers.	Seers.
Chittagong	17·3	16·75
Noakholly	17·3	18·50
Tipperah	17·1	17·8
Hill Tracts	12·8	12·8

The wages of labour are usually high in this Division. The lowest rate for unskilled labour is four annas a day, while as much as eight annas a day can sometimes be obtained.

The condition of the inhabitants of the Division is almost always good, and was rather above the average during the year 1885-86. Unfortunately for themselves, the possession of surplus funds tends to promote continual litigation. The inhabitants of Chittagong and Noakholly earn large sums as lascars and firemen, the Borooah Mughls are well-known as the best and most highly-paid cooks, while even ordinary workmen find very remunerative employment in Burma.

The annexed table shows the rainfall at the sudder station of each district of the Patná Division during the year, as compared with the previous year:—

				1885-86.	1884-85.
				Inches.	Inches.
Patná	41·36	31·31
Gayá	52·60	25·63
Sháhábád	45·57	26·10
Muzaffarpur	45·41	31·74
Durbhanga	59·09	31·89
Sarun	48·71	34·63
Champáran	46·28	44·02

The rainfall of the year was abundant, and though in some places it was not well distributed, and in others it caused loss by local floods, the crops were on the whole excellent. The *rubbi* harvest was everywhere good, and the outturn of opium was entirely satisfactory. The *bhadai* harvest was somewhat inferior, but the *aghani* crop was generally above the average.

The following table gives the average quantities of rice and wheat sold per rupee at the head-quarters of the different districts during the last two years:—

DISTRICTS.				COMMON RICE.		WHEAT.	
				1884-85.	1885-86.	1884-85.	1885-86.
				S. c.	S. c.	S. c.	S. c.
Patná	14 4	15 4	18 8	21 1
Gayá	13 6	13 14	16 14	17 10
Sháhábád	13 14	14 10	19 0	18 15
Muzaffarpur	13 6	14 6	17 6	17 14
Durbhanga	13 4	14 6	16 5	16 9
Sarun	14 2	17 1	19 2	19 2
Champáran	15 12	15 16	17 3	17 9

The tendency of food prices has been to fall slightly, but not to the extent which might have been expected from the excellence of the harvests. A large amount of grain was exported, and it is believed that stocks have been replenished. The wages of labour are stationary, being exactly the same as in the previous years.

The general condition of the people during the year under report was better than in the years immediately preceding. The good crops of the year have brought much relief after a succession of bad harvests. Plentiful stocks of food are believed to exist, and complaints of want are no longer heard. Labour was abundant, and there was no necessity of migrating to other parts of the country in search of food.

Bhagalpur Division.

The table below shows the rainfall of the year in the Bhagalpur Division, as compared with the figures of the preceding two years:—

DISTRICTS.					1883-84.	1884-85.	1885-86.
					Inches.	Inches.	Inches.
Monghyr	28·34	32·9	41·76
Bhagalpur	40·17	37·04	60·73
Purneah	36·39	50·01	57·32
Maldah	35·97	39·70	62·53
Santál Pergunnahs	47·09	33·75	62·37

The rainfall in all districts was heavier than in the preceding two years: it was also very unevenly distributed over the different months of the rainy season, and the excessive fall in August and September was followed by floods in some part of every district. In Monghyr, Bhagalpur, Purneah, and Maldah the *bhadai* crop suffered more or less; and in some parts of Bhagalpur and Purneah the *aghani* or winter rice crop was also affected. In Monghyr the rice on high lands sustained much injury owing to the early cessation of the rains. In the southern part of the district of Maldah the *bhadai* crop was almost entirely destroyed. This loss was compensated by a fair outturn (14 annas) of winter rice, and an unusually large crop of *kalai*. The estimated outturn in annas of the different harvests in the other districts of the Division was as follows:—

					<i>Bhadai.</i>	<i>Aghani.</i>	<i>Rubbi.</i>
Monghyr	12	10	14
Bhagalpur	10	10	12
Purneah	9	11	10
Santál Pergunnahs	12	16	20

The prices of the two principal food-grains for the past three years are shown in the following statement:—

DISTRICTS.					1883-84.		1884-85.		1885-86.	
					Rice per rupee.	Wheat per rupee.	Rice per rupee.	Wheat per rupee.	Rice per rupee.	Wheat per rupee.
					S. c.	S. c.	S. c.	S. c.	S. c.	S. c.
Monghyr	18 13	14 7	12 15	20 0	13 15	19 9
Bhagalpur	16 1	16 0	12 11	18 12	12 11	17 15
Purneah	16 7	16 8	14 13	16 12	16 5	17 13
Maldah	15 9	18 4	14 4	19 11	18 5	18 3
Santál Pergunnahs	19 11	14 9	15 3	15 3	17 11	16 1

The marked differences between Monghyr and Bhagalpur and the rest of the Division are no doubt to be accounted for by the superior means of disposing of agricultural produce in these two districts. Prices were, on the whole, much lower than in the previous year, owing to fair winter crops and prospects of a good *rubbi* harvest. Wages of labour remained steady throughout the year.

The condition of the people, never very satisfactory in the districts of this Division south of the Ganges, seems, on the whole, to have improved during the year under report, and they are slowly but surely recovering from the effects of previous bad seasons. In the district of Maldah there was some pressure on account of the floods, but it was confined to a very limited area.

The following table shows the rainfall at the sudder stations of the districts of the Orissa Division during the year, as compared with that of the previous year:—

Orissa Division.

				1884-85.	1885-86.
				Inches.	Inches.
Cuttack	61.24	48.25
Puri	66.99	33.80
Balasor	80.18	60.44

In all the three districts the rainfall was much less than in the preceding year. In Cuttack, however, a sufficient quantity of rain fell in July, August, and September, when it was most needed, and there would have been a bumper harvest had not a terrible cyclone on the 22nd September destroyed all hopes of good crops in the Jajpur and Kendrapará subdivisions. In the Kuldíp pergunnah of Kendrapará, the whole of the cultivation was lost, and in the pergunnah of Kerora the loss amounted to 75 per cent. In Puri the year was also an unfavourable one. The scanty rainfall from the middle of May to that of June retarded the puddling operations, and dried up the crops to some extent. Towards the end of June a sudden flood entirely destroyed the crops on the low lands, where replanting was impossible. There was also an unusual amount of rain in November and December, which, though advantageous to the spring crops, did considerable damage to the ripe crops in the ground. In Balasor the rainfall, though not up to the average, was well distributed, and the *sarail* rice crop (the only important crop in the district) was a full average one. The cyclone of the 22nd September, which caused so much destruction in Cuttack, did but little mischief in Balasor and Puri coast.

In Cuttack and Puri the average price of rice was considerably higher than in the previous year, the figures for the two sudder subdivisions being 15 seers 8 chittacks and 17 seers 9 chittacks respectively, against 18 seers 8 chittacks and 19 seers 9 chittacks in 1884-85. In Balasor, where prices are kept up, in spite of good harvests, by the export trade, there was very little change. The average for the Sudder subdivision was 21.4 seers, and that for the Bhuddruck subdivision 29.7 seers, against 22.66 seers and 29 seers in the previous year. There was no change in the wages of labour.

In Cuttack the cyclone left a considerable proportion of the population of two subdivisions almost destitute, and relief operations were carried on amongst them; while throughout the district the people were worse off than in the previous year. In Balasor a succession of good years has had a great effect in improving the material condition of the people. There is a considerable increase in wealth, and the mode of living has much improved. In Puri the general state of the people showed no marked change during the year.

The following table compares the rainfall in each district of the Chutiá Chutiá Nágpur Division. Nágpur Division during the past three years:—

			HAZÁRIBÁGH.		LOHÁRDAGÁ.		SING- BHÚM.	MÁNDRU'M.	
			Hazari- bágh town.	Chattra.	Giridih.	Ránela.	Palamow.	Chyebassa.	Purnia.
			Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
1883-84.	49.26	...	40.53	57.60	32.92	53.12	60.57
1884-85	48.40	...	31.98	51.11	30.95	48.98	42.47
1885-86	61.95	32.51	75.14	55.92	54.81	55.94	57.99

The rainfall varied greatly in different parts of the Division, from 32.51 at Chattra, on the west of Hazáribágh, to 75.14 at Giridhi, in the same district. The fall at Chattra was exceptionally light; generally speaking, more rain fell throughout the Division than in the previous year, and it was distributed more evenly. The result was a good winter rice crop everywhere, except in the western pergunnalis of Hazáribágh, in which, as the Deputy Commissioner reports, "a great deal of the higher lying lands had not been cultivated at all, and a great deal of what had been cultivated bore indications of the crops having been poor in a greater or less degree." The *bhadoi* crops were fair, except in Palamow, where they were injured by excessive rain in August. Singbhúm is reported to have been exceptionally fortunate, every important crop yielding a bumper outturn; and not less than a 14-anna crop of

winter rice was harvested in any other district, except the Chattra subdivision of Hazáribágh, where the outturn is estimated at eight annas. The yield of mahua, which is an important crop in Hazáribágh, is set down at 12 annas.

The following table compares the average prices of common rice and wheat in the several districts during the past three years:—

				HÁZARIBÁGH.		LOHÁRDAGÁ.		SINGBHÚM.		MÁNBHÚM.	
				Common rice per rupee.	Wheat per rupee.	Common rice per rupee.	Wheat per rupee.	Common rice per rupee.	Wheat per rupee.	Common rice per rupee.	Wheat per rupee.
				S. c.	S. c.	S. c.	S. c.	S. c.	S. c.	S. c.	S. c.
1883-84	15 9	15 3	20 9	15 8	23 13	13 8	31 8	18 4
1884-85	14 10	14 6	18 7	13 14	20 0	14 0	24 0	18 0½
1885-86	15 11	15 6	19 14	14 10	24 0	14 0	22 3	17 0

The average price of rice was lower than in the previous year in every district but Mánbhúm, where "the brisk demand for export to other parts of the province kept prices at a much higher level than they would otherwise have attained." The price of wheat fell in Hazáribágh and Lohárdagá.

The rates of skilled and unskilled labour remained almost unchanged except in Mánbhúm and Singbhúm. In the former district the wages of unskilled labourers are reported to have risen from 7 pice to 2 annas per diem. The rise took place when the railway works were first commenced, and the rate has not fallen since, notwithstanding the large number of labourers seeking employment at the beginning of the year. In Singbhúm also the rates for earthwork are said to have risen owing to better rates given by the railway contractors.

Except in portions of Hazáribágh and Mánbhúm, the people were, on the whole, far better off than in 1884-85. Some parts of Hazáribágh have suffered for three or four years from scanty harvests; but the good opium crops of the past two years have counteracted to some extent the failure of food crops, and the good harvests of all important staples secured during the past year have considerably improved matters. In pergunnahs Kendi, Ahoori, and Choi, however, where the rainfall was again deficient, there has been no such improvement in the condition of the people. In the Giridih and Kharakdiha thanas the cultivators are fortunate in having the collieries to turn to for work when their crops fail. In Mánbhúm a good deal of pressure was felt in many parts. There was something like a scarcity in pergunnah Bagda, where relief was promptly sent out. The distress, it is said, was intensified by the closing of work on the Bengal-Nágpur Railway, which threw some 13,000 persons out of work.

The appended statement shows the average retail price of common rice in each district of the Lower Provinces during the year 1885:—

Statement showing the average retail price of common rice in each district during the year 1885.

N.B.—This statement shows *roughly* the distribution of rainfall according to the needs of the agriculturists. The fall to the end of April may be called "the ploughing fall," and that to the end of June "the sowing fall." The fall between June and August matures the *aus*, and is essential to the transplanting of the *aman*. The fall in September matures the *aman*, while that after September fills out the ear of the *aman* and determines the prospects of the *rabi*.

Statement showing monthly variations in the retail prices of food-grains and salt in selected districts of Bengal from April 1885 to March 1886.

Famine and Floods Relief Administration.

In the last chapter account has been given of the weather, rainfall, and harvests of the year in the different divisions of the Lower Provinces, and notice has been taken of the prices of food-grains, of the wages of labour, and of the material condition of the agricultural classes. It will be convenient to give here a brief statement of the relief measures which were undertaken by Government during the year: I.—In districts where distress prevailed on account of deficiency in harvests of previous years. II.—In districts where injury was done to crops and houses by the floods of August and September 1885. III.—In the district of Cuttack, in Orissa, on account of the destruction of life and property caused by the cyclone and storm-wave of the 22nd September 1885.

<p>I.—In the cold weather of 1884-85, the local areas specified in the margin</p> <p>In the Ráj-háhl Division— Parts of the Bogra district.</p> <p>In the Presidency Division— Parts of the Nadiyá district. Parts of the Murshidábád district.</p> <p>In the Bhagalpur Division— Parts of the Maldah district.</p> <p>In the Patná Division— The sudder and Nawáda sub-divisions of the Gáwá district. The Behar sub-division of the Patná district.</p> <p>In the Bardwán Division— Parts of the Bardwán district. Parts of the Bírblhúm district.</p>	<p>gave more or less cause for anxiety on account of existing or apprehended scarcity of food owing to crop failure, and local officers were empowered to meet with adequate measures of relief any sudden emergency should such arise. No such emergency, however, came to pass. The cold weather months of 1884-85 passed over without the occurrence of any noticeable event in the way of distress among the people, or demand upon Government for assistance. The winter rice and the <i>rabi</i> harvests, even where they were poorest, afforded the people employment and relief; while the expenditure from local funds on district roads and other local</p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

improvements was directed towards the same end. By degrees the area calling for special care or attention from Government narrowed down. The winter rice harvest in Bogra was fair, and consequently the district soon ceased to give cause for concern. A similar remark applies to Nadiyá, which, until the floods of August, stood outside the area in need of relief. The Maldah district, in the early part of the year, called for observation; but after the favourable *rabi* harvest matters improved there, and no relief operations were necessary. In some isolated tracts in Murshidábád the people were somewhat pinched, but there was nowhere any actual distress calling for Government aid. In Monghyr and Bhagalpur also a fair *rabi* rendered relief measures unnecessary. In May 1885, the Lieutenant-Governor was able to state that, as far as the effects of the monsoon of 1884 were concerned, in the Patná and Bardwán Divisions alone did any reason for anxiety continue to exist. The anxiety in regard to the affected tracts in the Patná Division was always of a mitigated character, and more in the nature of apprehensions for the future than of concern regarding existing distress. But over about 1,000 square miles in the Bánkura, Bardwán, and Bírblhúm districts, in which there had been crop failure more or less pronounced for two successive years, serious distress, necessitating the establishment of systematic relief operations, became apparent in the spring.

Such measures first became necessary in certain isolated tracts in the Bardwán and Bírblhúm districts, but later on distress appeared in Bánkura, and there also it became necessary to administer relief. In the relief of distress in the Bírblhúm district the Government was ably and effectively seconded by the Indian Association and the Sadharan Brahmo Somaj, whose delegates were early in the field, and who afforded the local officers valuable assistance, while also distributing in an effective yet economical manner the funds which private charity had placed at their disposal. Good work was also done in Bírblhúm by two local Associations, and among the zemindars of the district, Babu Budh Singh and Babu Bishan Chand Dadhuria and Rai Dhapate Singh maintained at much cost kitchens where a large number of poor and helpless persons were fed daily.

The classes who stood in need of relief were, as might have been expected, (a) the beggars and others who, in ordinary times, subsist on the charity of their neighbours; (b) the day-labourers. The poorer among the landholding and cultivating classes were no doubt a good deal pinched; but it cannot be said that among this class there was any general want of food in the distressed areas. The supply of food was always plentiful in the markets and at prices which can hardly be said to have touched famine rates. For example, the highest price touched by rice, which is the grain usually eaten in those districts, was 13 seers 14 chittacks in Bardwán, 13 seers 12 chittacks in Bír bhúm, and 16 seers 4 chittacks in Bánkúrá. These are not famine rates, and the difficulty lay in the fact that the failure in the local crops restricted the labour market and forced on Government the necessity of providing employment for those whose circumstances prevented them from emigrating in search of work.

The relief operations of Government in the affected tracts fell under three main heads—(a) advances under the Land Improvement and Agriculturists' Loans Acts; (b) Public Works; (c) gratuitous charitable relief. Under the first-mentioned mode of relief administration, Rs. 1,25,000 were advanced in the Bardwán, Bánkúrá, and Bír bhúm districts from the 1st April to the 31st December 1886.

The Public Works system of relief was carried on by grants made from time to time in aid of the District Road Cess funds, and by special grants for excavation of tanks, &c., which did not fall properly within the province of Road Cess Committees to execute. The grants made from the 1st April to the 31st December 1885 to the district funds for relief works amounted to Rs. 7,000, while the special grants for public works of the nature just mentioned reached a total of Rs. 22,000.

Under the head of charitable relief, the expenditure from the 1st of April (when charitable relief on a systematic scale became necessary to the end of December 1885) amounted to Rs. 42,000. Of this sum, Rs. 24,100 was spent in Bír bhúm, Rs. 11,500 in Bánkúrá, Rs. 7,000 in Bardwán. These sums were largely supplemented by expenditure from funds subscribed by the public and expended through the unofficial agencies.

Among subsidiary methods of relief the following may be mentioned:—To chowkidars, who in these districts are often paid by grants of service land, and who suffered with the rest of the agricultural population, while their public duties prevented them from leaving their villages in search of employment, special money advances were made. Special measures of assistance were set on foot to enable the women of the better classes, who could not go abroad in search of employment, to earn a livelihood at their own homes. These and the more regular operations cost the Government, from the 1st April to December 1885, a total sum of Rs. 1,96,000.

In the administration of all measures of relief it was sought from the beginning to adhere to the provisions of the Provisional Famine Code. The unofficial agencies for the distribution of charitable relief were satisfied with giving a daily dole of food, somewhat less than that prescribed by the Code, and some local officers were disposed to act likewise. No deviation, however, from the Code scale was sanctioned, the Lieutenant-Governor being convinced that, from a scheme drawn up with the care and deliberation which was bestowed on the Famine Code, no deviation should be lightly permitted. The following statement shows the daily average number of persons receiving charitable relief in each of these districts through Government agency and through private agency, as far as was known, in the months from May to September 1885:—

DAILY AVERAGE NUMBER OF PERSONS RECEIVING CHARITABLE RELIEF—

	At end of May.	At end of June.	At end of July.	At end of August.	At end of September.	At end of October.	In first fortnight of November
Bardwán	... 4,549	5,163	5,350	4,595	3,477	942 (Charitable relief centres closed at the end of October.)
Bír bhúm	... 12,895	14,340	7,987	5,701	5,357	4,513	2,370
Bánkúrá	... 1,960	2,670	2,860	2,715	1,924	(Charitable relief centres closed in October.)

With the fall of normal rain in June in Bardwán and Bánkurá, and abundant rain in Bírghúm in July, all apprehensions of another failure of crops were removed, and the numbers of persons receiving charitable relief began steadily to diminish. By the end of September it was found possible to begin closing relief centres in Bánkurá; and as during October prospects in all three districts continued to be favourable, the Lieutenant-Governor ordered that charitable relief administration should cease from the 10th November. Relief works, however, remained open, where necessary, till the 1st December, by which date harvests were everywhere in active operation.

The Lieutenant-Governor is glad to record that the success of the relief operations in this Division in the prevention of mortality from want of food was complete. From time to time reports, sometimes of a most circumstantial character, of mortality from starvation reached the Government, but these rumours were on investigation in every case proved to be without foundation.

II.—FLOODS IN CENTRAL AND SOUTH-WESTERN BENGAL.

The floods which occurred during August and September 1885 in South-West and Central Bengal, and in parts of the Bhagalpur Division, were caused by the excessive rainfall of August and September, details of which have been given in the section dealing with the meteorology of the year. The Ganges rose to an unusual height at the point where it bends to the south and inundated parts of the districts of Maldah, the Santál Pergunnahs, North Bhagalpur, and Purneah in the Bhagalpur Division. The great rivers into which the Ganges divides as it passes through Central Bengal also rose to unusual heights and spilled in destructive floods over Central and South-Western Bengal. The total area affected by serious floods is estimated to have been from 3,500 to 4,000 square miles.

In the Bhagalpur Division the damage done was not very extensive. In Maldah the *bhadai* crop over about 100 square miles of country was to a large extent destroyed, and this caused temporary distress to the inhabitants of the locality which was flooded. A grant of Rs. 16,000 was made for relief operations in this district. In the Santál Pergunnahs, North Bhagalpur, and Purneah the inundated areas were small, and the injury to crops of no considerable significance. Small sums, to relieve cases of urgent distress, were placed at the disposal of the local officers. In these localities floods are of normal occurrence; and though the floods of this year were unusually high, the damage which they caused was not such as to call for any systematized relief operations on the part of Government.

The Murshidábád district suffered more than any other part of these Provinces, Nadiyá perhaps excepted, from the floods. In Murshidábád it is estimated that the floods extended to about 1,250 square miles, or more than one-half of the total district area. The tracts flooded were chiefly the Bagri or low-lying lands; while the Rarh or up-lands, which suffered in previous years from scanty rainfall, were benefited by the heavy rain and partial flooding. For the immediate relief of distress in this district, the country was parcelled off into relief circles, and grants of Rs. 25,000 for agricultural loans and of Rs. 1,000 for charitable relief were made, these sums being in addition to those raised and received for the Inundations Distress Relief Committee. By the beginning of October the floods had subsided except in the very low lands. The jute and mulberry crops were, for the most part, saved, and *kalai*, which was most extensively grown, gave an abundant harvest. The Murshidábád district was one of those visited by the Lieutenant-Governor last September, and the impression left on Sir Rivers Thompson's mind, after personal inspection of the locality, was that, though much temporary hardship and discomfort had been caused to the cultivating classes, the floods had done them little or no permanent harm, and, in fact, had ensured to them for the next few years crops far more abundant than those which they have lost.

There was no abnormal mortality among the cattle, nor any unusual sickness among the people of this district in consequence of the floods.

In the Nadiyá district, Mr. Melitus, who was placed on special duty to enquire into the extent of the floods and to distribute loans for the relief of distress, estimated that the whole area affected by unusual floods was close on

2,200 square miles, and he classifies the inundated tracts into—Parts benefited by the floods, *i.e.*, where the injury to the standing crops was slight and not to be compared with the compensating advantages; parts where there was considerable loss, but where it was generally admitted that the ryots would be more than compensated for all loss after harvesting their *rabi* crops; lastly, parts where the greater portion of the crop was destroyed, and where, considering the injury to houses, loss of cattle, &c., the loss would probably not be compensated for by the increased *rabi* outturn of this season. These three classes of areas were estimated by Mr. Melitus to cover about 1,000, 800, and 400 square miles respectively, the tracts most injuriously affected being situated chiefly in the Sudder and Kushtea subdivisions.

In the Sudder subdivision, which suffered most severely from the floods, the *aus*, or autumn crop of rice, is the most important crop of the year, and in that subdivision it was estimated to have yielded no larger outturn than from 5 to 6 annas. The yield of the *aman* or winter rice was estimated as a three-anna crop only in this part of the district. The Kushtea subdivision fared comparatively well, as there the *aus* was a ten-anna crop and the *aman* not much, if at all, less. In the rest of the district the crops were not much under the average. Throughout the district the soil, enriched by alluvial deposit left by the inundation, yielded excellent cold-weather crops.

There was much general discomfort in this district on account of loss of houses and personal property, while in the tracts where most damage was done there was distress, nowhere, however, amounting to starvation, among the poorer classes. Grants of Rs. 25,000 for agricultural loans, Rs. 5,000 for relief works, and Rs. 2,000 for charitable relief, were made by Government, and local subscriptions were raised for the relief of distress. The district rapidly recovered from the effects of the flood with the ripening of the *rabi* crops.

In Jessor four hundred square miles of country were more or less flooded. The effects of the floods on the crops in this district have been noticed in the chapter on Rainfall and Crops. In the Bongong subdivision many houses were also injured. To meet immediate wants, a sum of Rs. 1,500 was placed at the Collector's disposal for charitable relief, and local subscriptions were raised. A small grant for agricultural loans was also made.

In the Bardwán district only a small tract of about 28 square miles of country was submerged—chiefly by the overflow of the Bhágrathi river, but in this area 15,000 bighas of *aman* rice and 10,000 bighas of *aus* rice were almost entirely destroyed. The land submerged, however, did not suffer from last season's drought, and the cultivators were therefore able to withstand the effects of the inundation. It was believed that the inundations were of great benefit to the *rabi* cultivation.

BARDWÁN DIVISION.

Bardwán.

There were two floods in this district. The first flood was chiefly confined to the basin of the Selai river which burst its banks, flooding Ghattal town, destroying many houses, and overflowing the neighbouring country. Later on the waters of the Selai and of the Kusai rivers again rose and flooded the western portion of the district, breaching the embankments in many places. In the whole district about 1,000 square miles were flooded, of which some 750 square miles were under cultivation. Of the cultivated area, it is estimated that 150,000 acres of rice were destroyed, 105,000 acres damaged, while 225,000 acres escaped without injury. The loss of human life was small (only three persons are mentioned as having been drowned and two persons as having been killed by the falling of a house), but some loss of cattle was reported. The loss of houses and the damage done to public roads were very great. The general effects of the floods on the crops in this district have been noted above. Grants of Rs. 10,000 for agricultural loans and of Rs. 1,500 for charitable relief were made by Government, while local subscriptions amounting to Rs. 6,500 were also raised for the latter purpose. Relief committees were organised where needed.

Midnapur.

In this district the flood was heaviest in the Jahánábád sub-division, in which an area of about 233 miles suffered from serious inundation. In the Sudder and Serampore subdivisions there was some loss of crop in low lands, tempered with corresponding gain in high lands. The loss of the *aman* crop is, however, an almost

Húgli.

annual occurrence in parts of this district on account of the floods of the Damuda ; and as a great portion of it is sown somewhat speculatively, its loss is not severely felt. No loss of human life occurred, and few cattle were drowned, but there was some mortality among cattle on account of want of fodder. Grants of Rs. 1,500 for charitable relief and Rs. 2,000 for agricultural loans were sanctioned by Government.

In this district about 213 square miles of country were inundated, and in two-thirds of this area the rice crop was lost. The Howrah. sugarcane, jute, and vegetable crops were destroyed over about 12 square miles more, and it was reckoned that about 15,000 houses were overthrown by the flood waters. The loss of the rice crop was to some extent made up by an extension of *boro* rice cultivation, but the whole outturn of rice was estimated at only six annas in the flooded area. Only one life was reported to have been lost in the floods. Subscriptions for the relief of distress were raised in this district and in Húgli.

Reference is necessary to the co-operation afforded by the Flood Relief Committee, which was appointed at the end of September 1885 by the Lieutenant-Governor, on the invitation of a number of gentlemen in Calcutta, to collect subscriptions and organise relief for those forms of distress with which Government agency could not adequately cope. This Committee acted in hearty co-operation with the local officers, and their successful exertions in the relief of persons who had lost their houses and moveable property laid many families under a debt of gratitude. The Committee received subscriptions amounting to Rs. 65,665, including sums collected in Bombay, in Assam, and at Lahore, and expended about Rs. 37,000 in the relief of distress.

With the sanction of the Lieutenant-Governor the balance of the Committee's Funds has been invested in Government securities and deposited in the Bank of Bengal in the names of four trustees, viz.,—a Member of the Board of Revenue, the President of the Chamber of Commerce, the President of the British Indian Association, and the Master of the Trades' Association, to form a nucleus of a distress fund to be applied promptly on the occurrence of future calamities by famine or inundation in these Provinces.

III.—THE STORM-WAVE ON THE ORISSA COAST.

A great calamity overtook the province of Orissa in the storm-wave which submerged a portion of the coast of the Cuttack district at the mouth of the Mahanadi river on the 22nd September 1885. The centre of the cyclone which drove up this sea-wave appears to have passed over False Point. Over this place at 6-20 A.M., on the date named, broke a sea-wave 15 feet high. The wave submerged the village of Jumbo at the terminus of the Kendrapará canal to the north-west of False Point, and rolled on in a north-easterly direction over the Kaldip and Karara pergunnahs, belonging to the Kanika Ward's estate, till it lost itself in the Brahmini river. The Kaldip and Karara pergunnahs included 290 villages with a population of about 26,000 persons, and in these pergunnahs an area of about 250 square miles was submerged. Eleven villages in these pergunnahs were completely swept away, every man, woman, and child having been drowned by the storm-wave, and all trace of houses having been washed away. About 150 more villages in the same pergunnahs were entirely levelled and their crops completely destroyed ; a considerable part of the population, however, escaped. In the villages west of these pergunnahs many lives were also lost, and much damage was done to crops. It was estimated that about 5,000 persons were drowned by the storm-wave. In the interior of the Cuttack district, about Jajpur, there was great destruction of trees and houses. Three hundred lives were lost by falling trees, walls, and homesteads. The Executive Engineer's house at Aquapada was entirely wrecked, the roof bodily carried away, and some of the masonry pillars destroyed. The Europeans (one a lady) at the time in the house were driven outside, and were for some hours exposed to the violence of wind and rain. Immediately after the disaster on the coast the Commissioner of the Division and officers of the district staff visited the devastated country and distributed food to the survivors. Charitable relief was administered at the beginning of the relief operations to about 8,000 persons daily. A grant of

Rs. 20,000 was made by Government for this purpose. The Commissioner was also authorised to make advances under the Agriculturists' Loans Act and the Land Improvement Act in cases of urgent necessity. Another grant of Rs. 20,000 was sanctioned out of the funds of the Kanika Ward's estate for charitable donations to ryots of that estate. The villages which were not utterly destroyed were reported by the Commissioner to have recovered from the effects of the storm with remarkable rapidity. Trade was for a time suspended, whilst the inhabitants set to work to repair their homesteads, but within a short time few vestiges of the destructive character of the storm remained.

The effect of the storm-wave in the Balasor district was far less disastrous than in the Cuttack district. The only tract in this district which suffered very seriously was the Government estate Birso, where the loss was chiefly in cattle and crops. It was found that most of the tenants in this estate had lost either their whole crop, or at least three-fourths of it. Relief was granted by remission of the entire rent of the estate for the year 1293 F.S., and by money advances. The Government estate of Noanand also suffered, but there was little loss of its paddy crop. Here, as in other parts of the Balasor district over which the cyclone passed, there were a large number of houses and trees blown down by the wind, and in places sugarcane plants were uprooted.

With the above exceptions, the sea-coast of the Balasor district, which is for the most part uninhabited and covered with jungle, did not seriously suffer from the sea-wave and cyclone. The wave was stopped in this district by the embankment of the sea-coast canal. This embankment is said by the local officers to have saved hundreds of square miles of country from being submerged by salt-water.

The district of Purí did not suffer from the cyclone and the sea-wave.

Agriculture and Horticulture.

THE establishment were engaged in keeping up as high a standard of cultivation and arrangement as possible amongst the plants in the conservatories and grounds. The show of orchids was excellent, and the general appearance of the garden was very satisfactory. The river frontage, which had suffered from erosion, was protected by a facing of broken brick metal, which made it fairly secure.

A large quantity of mahogany seed was received during the year from Kew and Jamaica. Much of this was distributed, and the remainder having been sown in the garden, yielded about 20,000 seedlings. Other timber plants of useful sorts were grown for distribution. The Superintendent reported that a year's further experience confirmed him in the belief that the paper mulberry tree (which supplies the material from which the *tappa* cloth of Polynesia and the bulk of the paper of China and Japan are manufactured) finds a congenial soil in Bengal. The bark of this plant is considered by English paper-makers to be nearly the best of paper fibres. The utilization of the fibre of the common plantain for paper-making has been rendered possible by the invention of a machine patented by a retired officer of the Madras Army.

The herbarium attached to the garden received material additions during the year. Valuable specimens were contributed by Mr. Kunstler from Malaya, by Mr. Pantling from the Eastern Himalayas, by Mr. Duthie from Kumaun, by Mr. Gamble from Madras, and by Messrs. Clarke and Mann from Assam and the Khasia Hills. Interesting contributions were also received from Mr. Boissien, Sir J. Hooker, Mr. Talbot (Canara Forests), Mr. Ellis (Chittagong Hill Tracts), Baron Von Mueller of Melbourne, Professor Engler of Breslau, Dr. Cooke (Poona), Dr. Giles, the Naturalist with the Gilgit Expedition, Dr. Treub (Java), Mr. Cartes (Penang), Mr. Hallet (Singapore), Mr. Campbell (Mánbhúm), and Major Sedgewick.

Fifty-three thousand seven hundred and fifty-two plants were issued and 9,251 plants were received during the year; 3,292 packets of seeds were distributed and 914 packets were received.

The Lloyd Botanic Garden at Dárjiling was reported to be recovering from the ravages of the cockchafer grubs. The landslips from the Sanitarium Hill, which used to cause much damage, have ceased. Dr. King was in communication with the Dárjiling Municipality for the resumption of the plot of land situated between the Eden Sanitarium and the Botanic Garden, to be worked as a vegetable garden for the benefit of the station.

The expenditure on the Calcutta Botanic Garden amounted to Rs. 69,870, there being a set-off of Rs. 1,091 realized from the sale of surplus plants. The expenditure on the Lloyd Botanic Garden at Dárjiling amounted to Rs. 7,372, while the sale of surplus plants yielded Rs. 741.

An exhibition of silk cocoons was held at Rámpur Beauléah (for the first time at this place) in January 1886. The number of exhibits, 230, was much smaller than that at the Berhampore exhibition last year, but it is hoped that though this first effort to improve the local silk cultivation has been on a small scale, it has produced some good. The exhibition has fostered a spirit of emulation among the cocoon rearers by bringing together cocoons of the various silk-producing tracts, and astonishment was expressed by many of the exhibitors at seeing

Botanical Gardens, Calcutta.

Lloyd Botanical Garden, Dárjiling.

Exhibition of silk cocoons.

work superior to what they could themselves produce. The exhibitors appeared to appreciate, on the whole, the object of the exhibition, and there is reason to hope that similar exhibitions in the several silk-producing districts may lead to good results. A sum of Rs. 1,548 was collected by subscription for the Rámpur Beaulah exhibition, and grants amounting to Rs. 1,543 were made by the Lieutenant-Governor from Provincial funds. A sum of Rs. 1,870 was given from the collections in prizes to exhibitors.

Exhibits were received from the following districts:—Rájsháhí 141, Murshidábád 83, Bírbehím 5, and Nadiyá 1.

It is intended to hold an exhibition next year in a place to be decided upon hereafter.

The appointment, for a period of two years, of a special officer to advise the Lieutenant-Governor on all matters relating to agriculture and statistics, to undertake preliminary enquiries in connection with the experimental survey in the Patná Division, and to assist in obtaining detailed information required by the Secretary of State as to Government and wards' estates, was sanctioned by the Government of India in May 1884. On Mr. Finucane's return from furlough at the end of December 1884, he was selected to be the Director of the Agricultural Department for the performance of these duties, and was at first employed mainly on pressing work in connection with the Bill which subsequently was passed as the Bengal Tenancy Act. On the 2nd May 1885 a Resolution was issued, defining broadly the functions of the newly-created office to be of two kinds—agricultural research, including the arrangements for the experimental survey in Muzaffarpur district, and for the maintenance of the results obtained by a system of village records, as also the collection of the returns of the prices of food-staples required by the Bengal Tenancy Act; and agricultural improvements, to be undertaken with the co-operation of such societies as the Agri-Horticultural and the Zoological, of local Committees, and of such landowners or farmers as might be good enough to lend their assistance. In regard to duties of the first class, he was placed under the control of the Board of Revenue, and directed to report to them; while his efforts for agricultural improvement were to be made under the direct orders of Government in the Revenue Department. The services of Mr. Allen, c.s., placed for one year in charge of the Government estates of Shahabad, of Mr. Ambica Churn Sen, c.s., and Mr. Sakhawat Hossein, Deputy Collector, all graduates of the Cirencester College, were placed at his disposal, so far as this could be done without interfering with their other duties.

The following narrative refers to the period from the date of Mr. Finucane's delegation on special duty, and more particularly from May 1885 to the end of July 1886.

Notice of the Muzaffarpur cadastral survey work, which has been supervised by the Director of the Agricultural Department, so far as regards the framing of the record of rights and the settlement of fair rents, will be found in Chapter II of this report.

A great number of agricultural experiments were made under the skilled supervision of the Cirencester graduates, and with the co-operation of zemindars and cultivators, particularly of the Maharajah of Dumraon, Mr. Burrows of Bihiyá, and Moulvie Fazl Imam of Patná. A programme of experiments to be tried during the present year has been arranged with the Agricultural and Horticultural Society. In Bengal more, perhaps, than in other parts of India, there exists a large class of educated men connected with agriculture by their daily pursuits, and ready, when properly approached, to work with official experts for the purpose of ascertaining facts, testing supposed improvements, and diffusing useful information. In this respect Bengal is probably the most promising field yet opened to the Agricultural Department. The readiness with which any real improvement is accepted by the ryots in these provinces is illustrated by the fact that they have bought from the Department 564 of the ploughs invented by Mr. Sen and Ritter Von Schwarz, and ordered 400 more, though the instrument has not as yet been perfected, and its sale is therefore not pushed. As instances of successful experiment, the Director makes the following

remarks in his report on the working of the Agricultural Department from May 1885 to July 1886:—

“As examples of what may be effected in this way, it may be here mentioned that Mr. Sen’s report shows that in the Bardwán Division oil-cake is largely used by ryots as a manure in the cultivation of paddy with excellent results, while in many other parts of the country the practice is unknown. Similarly, the system of green manuring by ploughing in a crop of indigo, *sunni*, or *dhainchi*, of which a good deal has been written, is found to be actually practised by ryots in parts of Bardwán and Huglí, in the Jamalpur subdivision of Maimansingh, and it may be practised in other places also. Again, the Mauritius system of cultivating sugarcane, the superior advantages of which have been tested by experience and strongly recommended by Messrs. Mylne and Thompson of Bihiyá, is known and practised on the banks of the Damoodar and among the market gardeners in the neighbourhoods of Dacca and Calcutta. All the practices just mentioned are, on the other hand, unknown in the Bhagalpur and in the greater part of the Patná Divisions. A special department, even if it eschewed Western innovations on existing practices altogether, can do much good by introducing in such places as Bhagalpur and Patná the practices proved by experience to be beneficial in Bardwán or Maimansingh. To take another example of the same thing, it may be mentioned that efforts have from time to time been made to improve the quality of Bengal wheat, by introducing seed from Muzaffarnagar and Delhi in ignorance of the fact that the very best wheat in all India, known as Baxár No. 1 club, is largely produced and exported from the Baxár and Sasseram subdivisions of Sháhábád in Behar. This species was appraised by the Committee of the Calcutta Wheat and Trades’ Association, and was compared with the grain produced in the neighbouring division of Bhagalpur, and found to be 4 annas per maund superior to the latter in value. The Baxár seed was accordingly introduced into Bhagalpur, and yielded a grain described by the Committee of the Wheat and Trades’ Association to be a ‘splendid description of wheat—soft, mellow, bold, regular, and of good colour’—and 6 annas a maund superior in value to the local Bhagalpur grain. Applications for some hundreds of maunds of Baxár seed have since been received from various landholders in the Bhagalpur and other divisions for experimental cultivation of species. Here inquiry and knowledge of the facts elicited by it have shown the way to one very tangible and important improvement.”

It is noticed by Mr. Allen that the sole exception to the preservation by the cultivators of all sources of manure is the waste of bones, the best substance for restoring the phosphoric acid which every crop takes out of the soil. The bones were formerly suffered to lie where they might be of some little use, but are now collected gratuitously, ground into meal at Bally and elsewhere, and exported to Europe to the great detriment of Indian agriculture. Mr. Allen writes:—

“The only way to bring home to him (the cultivator) the folly of wasting this manure is to show the improved outturn from crops which have been manured with bones. The quickest means of rendering bones soluble and effective is to dissolve them in acid, but the process is too costly for adoption by the ordinary farmer. Accordingly, I proceeded to ferment bones in various places, and these will be applied to crops not only at the demonstration farms under my charge, but in a number of villages under the Court of Wards. It is to be hoped that the increased outturn, and the ease with which this manure can be prepared, may overcome caste prejudices, but of this it would be unwise to speak too confidently. In one case I induced an intelligent zemindar—Moulvie Fazlar Rahman of Dunri, to manure his beet-root with some bones which he had buried some years ago. The result was that he obtained finer roots than he had grown heretofore; but they were literally unsaleable in the local bazar, solely because they had been manured with bone. No such prejudice was shown at Arrah against the wheat which I had grown there on land similarly treated, so the experiments will be continued with the field crops, though the effect of bones is usually more apparent when applied, as in Europe, to root crops.”

Greater success has been obtained in the Bardwán district, as stated in the following passage of the Director's report:—

"Bone-meal was distributed in small quantities among selected talookdars in Bardwán, and was used as manure on rice and other crops with beneficial results. Brahmins are now glad to take it in their cloths with their own hands, though perfectly aware of what it is they are taking. The pundits have declared that there is no harm in their doing so. Already small quantities of this manure have been purchased by ryots and talookdars, who have had an opportunity of observing the benefits resulting from the use of it, and Mr. Sen reports that there will be no difficulty in disposing of large quantities of it, for manureal purposes, when the next paddy crop is being sown."

Owing to the absence of a village agency—a want which affects the Government of Bengal in every effort towards administrative reform—it has been impossible to prepare for

Agricultural statistics. Bengal returns of the area sown with each crop, as is done in other provinces. On the other hand, the residence in the interior of almost every district of skilled men engaged in agriculture or trade, and willing to supply information, enables the Director to afford, as to the probable outturn of crops, information of the character on which traders are accustomed to act. His forecast of the jute crop, founded on the reports of some hundreds of skilled correspondents, has been favourably noticed by the Dundee Chamber of Commerce. He also supplied a valuable report on wheat and its adulteration, which may be of use in the trade.

An Agricultural Show was held at Dumraon, in the district of Sháhábád, in February 1885, and another at Barrahpur, in the same neighbourhood, in February 1886. On the first of these annual gatherings the Director writes:—

"One useful result which followed the Doomraon Agricultural Exhibition was that the Maharajah of Doomraon, with a laudable desire to test the value of improved methods of cultivation, opened out on his *zirat* lands the experimental farm already described.

"There was considerable competition in exhibits, of grain, millets, pulses, and oil-seeds.

"The ryots at the Exhibition asked for samples of the best varieties of some grain which were not produced locally, viz., white varieties of linseed, gram, janera, and peas, and some fine qualities of paddy. They also took much interest in the awards for wheat, and on the recurrence of a similar Exhibition last cold weather in the neighbourhood at Barrahpur, some of the ryots who had received prizes at this Exhibition, but failed to do so at Barrahpur, questioned the propriety of the awards and seemed to be keenly interested in the results. If these Exhibitions are continued, and the cultivation of the better kinds of grain is thus fostered in Sháhábád,—the district which has taken the lead of all others in attempts at agricultural improvement,—the cultivators on Government estates may be induced to grow *pedigree* wheat for seed alone."

As to the second, he states:—

An Agricultural Exhibition was held at Barrahpur near Doomraon at the end of February 1886, and as I was present at it myself, I can testify to its having been a successful one. It was largely attended; the ryots took much interest in the proceedings. Mr. Power, the Collector, Mr. Jenkins, the Sub-divisional Officer, Mr. Allen, and the Executive Committee, took great pains in organizing this Exhibition, which they attended at much personal inconvenience. It was held in connection with a local *mela* in a somewhat out-of-the-way place, and was not accompanied by any of the social festivities which sometimes make these gatherings attractive.

Under skilled supervision and when supported by the public, such Shows produce excellent results, in diffusing agricultural knowledge, and in attracting the sympathy of the wealthy and intelligent classes to the details of the most general and indispensable of industrial pursuits.

An Exhibition took place at Kissenganj, in Purneah, in January 1886, at which there was a ready sale for axes, sickles and bill-hooks exhibited by Messrs. T. E. Thomson and Company. A demand has since arisen for the seed of superior class of potatoes exhibited. There were Exhibitions also organised without European aid in the Bákarganj and Noakhally districts.

Forests.

THE following statement shews the areas of the various classes of forests under the superintendence of the Forest Department during 1885-86 :—

Area of forests.				Acres.
Reserved forests	3,182,123
Protected „	1,419,845
District „	2,581,420
Total				7,183,388
Proposed reserves not yet finally gazetted				149,228
Total				7,332,616, or 11,457 square miles.

There was an increase of 57,856 acres in the areas of reserved forests, owing to additions in the Orissa and Jalpaiguri Divisions. The area of protected forests has remained very much as before, while the Department has been relieved of the superintendence of a wide extent of district forest. On the whole, the area watched has diminished by 171,818 acres.

Describing the forests, according to their geographical distribution, it may be noticed that 2,254,750 acres are included in the swampy wastes of the Sunderbuns in the 24 Pergunnahs and Khulna, while the 2,581,420 acres of “district forests” and 886,740 acres of the reserves comprise the whole of the unleased portion of the Chittagong Hill Tracts. The Sunderbuns reserves with 75 square miles of protected forests cover more than two-fifths of the area of the district of Khulna, and the protected forests spread over the greater portions of the subdivisions of Busirhat and Diamond Harbour in the 24-Pergunnahs, their extent in that district being 1,867 square miles out of the total district area of 3,964 square miles. Of the rest, the most important forest areas are on the Himalayan slopes in the district of Dárajling, in the rich Terai of Jalpaiguri, and in the wild country of Singbhúm. The Khurdha subdivision of Orissa contributes an area of 227,459 acres of forests, and Angul 179,260 acres. The list is closed with the smaller forests of Lohárdagá and Hazáribágh.

Information has for the first time been collected during the year under review regarding the length of the boundaries of all Bengal forests, except those in Orissa. Nine hundred and twelve miles of boundaries were recleared during the year, and 593 miles were kept clear as firetraces. Two hundred and three miles also were newly demarcated at the unusually high average cost of Rs. 14-15 per mile. Satisfactory progress was made in the surveys of boundaries in Dárajling, Chutiá Nágpur, and Singbhúm.

The provision of detailed working plans for all forests, to guide the controlling officers in their management for a long series of years, is a point on which much stress has been laid by the Government of India; and it is clear that without such plans no thoroughly systematic administration can be expected. Little could be done in this direction during the year, owing to want of the proper establishment. It was found necessary to trust the work to an officer already in charge not only of a forest division, but also of two of its subdivisions, and it was naturally impossible for him to find much time for the extra duties thus imposed on him. Since the close of the year, a special working plans division has been created, in charge of an officer who can devote the greater part of his time to the work, and better progress may now be expected.

The list of the Bengal controlling staff continued to be combined with that of Assam during the year under review. Since the commencement of the current year, a separation has been mutually agreed on and carried out.

Establishments.

Breaches of forest law.

Six hundred and twenty-four new cases of breaches of forest law and offences under the Penal Code were taken into court, and 739 cases were compounded, against 443 and 800 cases, respectively, in the previous year; 222 of the prosecutions actually proceeded with were instituted in the Dárjiling Division, chiefly cases of unauthorized felling and grazing, and 215 convictions were obtained; and 127 cases occurred in the Sunderbuns, of which the large majority were prosecutions of permit-holders for not returning their permits. The Sunderbuns division, as usual, shows the largest number of cases compounded, 317, the whole amount realised as compensation to Government in the division being Rs. 5,886, of which one case of cutting *sundri* wood, east of the Pussar river, accounts for no less than Rs. 4,035.

Forest fires.

The area of forest which it has been attempted to protect from fire has been largely extended during the past two years. In 1883-84, action was confined to 530,071 acres, in 1884-85 the Department sought to protect 806,209 acres, and in the year under review the area placed under protection rose to 829,253 acres. The additional areas taken in hand are in the Angul and Singbhum forests, where great difficulties have to be encountered, arising in Angul from the impossibility of properly clearing the boundary at the numerous points where its exact position is a matter of dispute with the adjoining Native States; and in Singbhum from the wild character of the aboriginal races inhabiting the forests, who have been accustomed from time immemorial to burn the jungle at certain seasons, and do not listen readily to any arguments in favour of relinquishing their ancient practice. In Singbhum, only 20,900 acres out of 101,120 were successfully protected, and the whole of the area in which no measures of protection were attempted, viz, 233,480 acres, was burnt. The results were rather better in Angul, where out of 179,200 acres success was attained in the case of 106,614 acres. In all other forests the measures taken proved unusually successful. Of 548,933 acres taken in hand, only 12,304 were burnt; in other words, the percentage of failure in these forests was only 2·2; but the total percentage was raised, by the inclusion of Singbhum and Angul, to 20. Although, as regards the ratio of success to failure, Bengal is far behind other provinces in which protective operations on a large scale are attempted, the statistics given in the Inspector-General of Forests' Review of Forest Administration in British India for 1884-85 show that immunity from fire is secured in Bengal at a less cost per acre than in any other province, except the Central Provinces and Berar, and it would certainly be undesirable to contract operations in order to reduce the percentage of failure. The difficulty felt in Angul will probably be solved by the survey of that mehal now in contemplation; and the obstacles which the Subdivisional Officer of Singbhum states that he finds in the way of getting the Kols to understand that forests are not to be fired may be overcome by patience and judicious explanations, joined with the necessary coercive measures. Excluding Singbhum, only 667 acres, out of an area of 2,119,390 acres in which no special protective measures were attempted, suffered from fire.

Grazing.

Grazing rules were finally passed for the Dárjiling subdivision in the course of the year; and it is satisfactory to learn that the graziers observe them willingly and have ceased to agitate for further privileges.

Plantations and conservancy.

One hundred and forty-six acres of regular plantations were added during the year, and the cost of this work, with that of preserving the plantations previously existing, amounted to Rs. 6,110. Seventy-seven acres were planted out in Orissa, but the result of the extension is reported to have been unsatisfactory, and 50 acres of tûn were added in the Dárjiling subdivision. Larger areas would have been planted out had not orders been passed under the general financial retrenchments to reduce expenditure. There are now 2,150 acres of regular plantations, and 931 acres more come under the head of "Cultural operations"—a

term which includes the filling in of blank spaces in forests in aid of natural reproduction, and the formation of nurseries in connection with these operations. Of the whole area of 3,081 acres, 1,032 are covered by hill trees, mainly oak and tûn, and 1,669 acres by plains trees, teak, tûn, sâl, &c. The greater portion of the remaining area is planted with bamboos. Special attention was paid to the cutting of creepers in Kurseong, where 2,612 acres were freed from creepers at a cost of $1\frac{1}{2}$ annas per acre, and in Baxá, where creepers were cut over 7,198 acres, at a cost slightly exceeding half an anna per acre.

Experiments with mahogany seed were continued during the year. The seed would not germinate at Dárjiling or Kurseong; but on its removal to the Terai a moderate degree of success was attained. In the Baxá and Chittagong Divisions the seed germinated freely, but in Chutiá Nágpur it was less successful. In Chittagong, divi-devi and paper mulberry seedlings were successfully planted out, but India-rubber again proved a failure.

Thirty-six new lines of export roads and inspection paths were opened, and 191 existing lines repaired during the year at a cost of Rs. 10,154. Of this sum, Rs. 4,637 had been expended in 1881-82 on the Goompahar cart-road in the Dárjiling subdivision, since made over to the Public Works Department, and was finally debited during the year under review. The greater portion of the new work was done in the Kurseong, Hazáribágh, and Singbhúm subdivisions. Rupees 24,493 were expended during the year in constructing and repairing buildings.

The following statement shows the total amount of produce removed from the forests during the year as compared with the previous year:—

Yield and working.

	By departmental agency.		Permit-holders.		Free grants.		Total.	
	1883-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.
Reserved forests—								
Timber	81,841	79,147	5,963,725	5,067,051	8,120	3,026	6,053,686	5,148,821
Fuel	160,298	328,213	13,261,306	11,035,393	175	13,421,779	11,361,794
Total	242,139	406,360	19,225,031	16,102,444	8,295	3,026	19,475,465	16,510,615
Protected and district forests—								
Timber	5,524	530,268	505,677	535,892	605,657
Fuel	5,978,275	4,952,812	5,378,275	4,985,812
Total	5,524	...	5,908,543	5,458,489	5,914,167	5,491,469
Grand Total of all Forests ...	247,663	406,360	25,133,574	21,560,933	8,295	3,026	25,389,632	22,002,084

Departmental working, that is to say, the felling, collection and carrying of timber and other forest produce by departmental agency, is little resorted to in Bengal, the greater part, both of timber and fuel, being removed from the forest under the permit system. Under the head of "Timber" direct operations of the Department were almost entirely confined to the removal of sâl logs from the remote parts of the reserved forests in the Baxá and Orissa Divisions. Of the 160,298 cubic feet of fuel removed by departmental agency, the Dárjiling subdivision accounts for 153,617 cubic feet, which is not more than half the quantity dealt with by the Department in the previous year. The reason of this appears to be that the supply of firewood to Dárjiling is now left almost entirely to the dealers, the Department only keeping up a reserve in order to prevent undue enhancement of prices. The increase in the quantity of both timber and fuel removed by permit-holders is accounted for by a revival of the demand for both classes of wood in the Sunderbuns. In the previous year it was reported that the firewood merchants, having large stocks on hand in Calcutta, were holding out against prepayment for produce removed from the forests, and this had caused a considerable falling off in the quantity removed from the Sunderbuns in 1884-85. As their stocks ran out, however, and they saw that it was hopeless to expect an alteration in the rules, the merchants gave up their opposition; and in 1885-86 removals of forest produce from the Sunderbuns were made on the same scale as in 1883-84. There was also a slight increase in the Teesta

subdivision, due to larger demands for fuel on tea estates. On the other hand, the quantity of produce removed in the Dárjiling subdivision greatly decreased, owing partly to the growing scarcity of trees fit for timber in the forests of this subdivision, and partly to the introduction of a new rule requiring enhanced prices for trees over eight feet in girth. There was a further falling off in removals from the reserves of the Baxá Division, unexplained in the report, but presumed to be due to timber merchants continuing to send their agents into the Bhutan forests, where timber is obtainable at almost nominal rates, in preference to paying the rates fixed by Government in the Baxá reserves. It is understood that the Bhutan Government levy no fees for extraction of timber, and trees can therefore be brought across the frontier and sold at a profit by charging little more than the actual cost of felling and carrying away. The number of bamboos removed from the forests was 24,389,863, against 21,710,126 in the previous year.

Financial results.

The financial results of the year's working compare as follows with those of 1884-85:—

			Receipts. Rs.	Charges. Rs.	Surplus. Rs.
1884-85	5,71,152	4,11,915	1,59,237
1885-86	5,97,432	3,70,399	2,27,033

The gross revenue is not as large as it was in each of the three years from 1881-82 to 1883-84, and the surplus is not quite up to the amount reached during that period; but the charges have been less during the year under review than in any year since 1880-81; and, as will be seen from the following statement, the proportion of surplus to gross revenue has made a decided advance towards the percentage attained in 1882-83 and 1883-84:—

			Gross revenue. Rs.	Surplus. Rs.	Proportion of surplus to gross revenue.
1881-82	6,33,734	2,39,122	37·7 per cent.
1882-83	6,93,959	3,11,776	44·9 „
1883-84	6,94,334	3,06,521	44·1 „
1884-85	5,71,152	1,59,237	28 „
1885-86	5,97,432	2,27,033	38 „

The Inspector-General's review of forest administration in British India for 1884-85 shows that, as regards proportion of surplus to gross revenue, Bengal in that year stood sixth on the list of the provinces of India; the improvement during the year under review should raise the province to the third place, unless a similar advance has been made in other provinces. The improvement was due almost entirely to increased receipts from the Sunderbuns, where the revenue depends mainly on the Calcutta demand for timber and firewood. There was also some increase in receipts from the Orissa forests, and from the small area under the Department in Chutiá Nágpur. The only divisions at present worked at a profit are the Sunderbuns, with a surplus of Rs. 2,79,742, and Chittagong with Rs. 66,578; the loss in the other divisions varies from Rs. 10,082 in Orissa to Rs. 54,268 in the new and only partially developed Chutiá Nágpur forests. In the Dárjiling Division the deficit was less than in the previous year; but owing to slack demand for timber, and the absence of departmental operations, increased deficits are shown against both Jalpáiguri and Baxá.

The falling off in outturn and receipts in the forests of the Himalayan ranges and the Terai is due to causes beyond the control of the Department, and, except as regards the Dárjiling subdivision, which was overworked in previous years, need not be regarded as other than temporary, while steady progress has been made in the other divisions in all branches of forest conservancy.

Manufactures and Mines.

IN last year's report the actual outturn of the indigo crop for each year from 1876-77 to 1883-84, and the estimated yield for 1884-85, were shown as follows:—

						Mds.
1876-77	1,55,149
1877-78	1,13,201
1878-79	73,128
1879-80	1,36,200
1880-81	1,35,405
1881-82	1,50,278
1882-83	1,59,388
1883-84	1,66,507
1884-85, estimated yield	1,10,000

The following statement, which has been prepared from Messrs. W. Moran & Co.'s market report, gives the actual yield of indigo for 1884-85, as compared with the estimate of that year, and the probable outturn of 1885-86:—

		Estimated yield, 1884-85.		Actual yield, 1884-85.		Estimated yield, 1885-86.
<i>Lower Bengal (and Behar)—</i>		Mds.		Mds.		Mds.
Jessor	...	2,635		2,714		1,700
Krishnagar	...	2,695		3,257		2,800
Midnapur	...	1,145		1,110		900
Bardwán	...	460		380		500
Maldah	...	530		519		650
Murshidábád	...	2,900		3,283		3,900
Rájsháhi and Pabná	...	815		811		750
Bhagalpur	...	2,300		2,189		4,500
Purneah	...	3,780		3,536		3,700
Rungpur and Native	...	2,540		2,030		1,600
		19,800		19,829		21,000
Monghyr	...	1,500		1,530		2,500
Tirhut	..	24,285		22,993		32,250
Champáran	...	15,965		16,409		17,125
Chupra	...	10,900		10,955		12,125
		52,650		51,887		64,000
<i>Benares—</i>						
European	...	6,000		7,808		8,000
Native	...	6,550		5,642		4,000
		12,550		13,450		12,000
<i>Doab—</i>						
European	...	4,000		2,575		4,500
Native	...	21,000		20,951		28,500
		25,000		23,526		33,000
Total	...	1,10,000		1,08,692		1,30,000

The actual outturn of 1884-85 fell short of the estimate on account of excessive rain, but it is believed that the outturn for 1885-86 greatly exceeded that of the preceding year.

The statement below shows the exports of indigo to foreign countries for the past two years :—

	1884-85.		1885-86.	
	Cwt.	Rs.	Cwt.	Rs.
To the United Kingdom	50,402	1,38,13,647	31,439	1,07,51,540
„ Austria—Trieste	10,520	31,20,170	9,427	33,19,868
„ France	13,566	43,78,642	10,862	36,03,442
„ Italy	720	2,27,096	677	2,20,209
„ Egypt	47	12,051	79	22,735
„ United States	23,770	66,26,771	18,654	59,41,563
„ Persia	393	1,31,410	230	80,961
„ Turkey in Asia	1,881	5,21,828	1,224	3,96,061
„ Other countries	4,770	14,02,339	3,517	12,60,534
Total ...	106,069	3,02,33,957	76,109	2,55,96,913
Quantity in Indian maunds, and average value per Indian maund.	1,14,372 Indian maunds.	@ Rs. 209 per Indian maund.	1,03,593 Indian maunds.	@ Rs. 218 per Indian maund.

There has been a decline of 28½ per cent. in the exports of indigo during the year 1885-86 as compared with those of 1884-85, and the figures are the lowest since 1879-80; but the average price realized, per maund, was considerably higher than that of the previous year, probably in consequence of the smaller outturn of the crop on sale and also in consequence of the quality of the crop being in many instances above the average.

The actual distribution of the crop for the past two years was as follows :—

	1885-86.	1884-85.
	Chests.	Chests.
Great Britain	5,600	9,200
France	4,000	5,167
Germany, Holland and Belgium	8,700	12,499
Italy and Switzerland	250	278
Russia	2,550	2,101
America	6,550	8,715
Gulfs and Levant	550	973
Total ...	28,200	38,333

With the decline in the outturn there has been a corresponding falling off in shipments to the several countries named, except in the case of Russia. The principal decrease has been in exports to the United Kingdom. The prices realized in London during the past year were fairly satisfactory, as the indigo sold generally realized prices higher than those paid at Calcutta, the reduced crop naturally causing a considerable advance in London values. All the East Indian indigo imported has gone into consumption, and the position of the dye is now said to be very strong. The stock in London of all kinds of East Indian indigo fell from 12,158 chests at the close of 1884 to 9,135 at the close of 1885. Large shipments direct to the United States still continue, although, owing to the short crop in the year 1884-85, they were smaller than in the year under review; the large shipments direct to Germany were similarly affected. With a rapidly increasing population, and in absence of competition from other dyes, the consumption of indigo in the United States should continue to advance.

The statement below illustrates the state of tea cultivation in Bengal during the calendar year 1885 :—

DIVISION.	District.	Number of plantations.	Approximate average elevation, in feet.	AREA IN ACRES.				APPROXIMATE YIELD IN POUNDS.			Average yield in pounds per acre of mature plants.
				Under mature plants.	Under immature plants.	Total area under tea.	Taken up for planting but not yet planted.	Black.	Green.	Total.

- (a) Information regarding 9 gardens not received.
(b) One garden of 45 acres under immature plants produced no tea.
(c) One garden of 400 acres produced no tea.
(d) No tea appears to have been produced.

The total number of tea gardens known to exist in the year was 369, but of these 10 furnished no reports, and in two it appears that no tea was produced. The total area under plant was 63,489-0-21½ acres, and the outturn for the year was 14,049,681½lb. Comparing the figures for 1885 with those for 1884, it will be observed that there has been an increase of 23 in the number of gardens, of 7,790 acres in the area under tea, and of 2,309,391½lb in the total yield. The year was a favourable one for the tea industry, and the average yield per acre varied from 424lb in Jalpaiguri to 158.53 in Dacca, the average for the province being 312.123lb per acre, against 281.157lb in 1884, or an increase of nearly 31lb per acre. The greatest increase occurred in the Chittagong Hill Tracts, where the average per acre was nearly 80lb greater than in the previous year. The average price of tea for the whole province was 10 annas 9 pies per lb as against 8 annas 9 pie in the preceding year.

The reports of the several tea-growing Divisions are summarized below :—

In this Division there were 29 gardens during the year, two more than in 1884. Of these, only 20 have submitted reports.

Chittagong. The season was favourable for tea, and the produce secured good prices in the market, owing to its fine quality and the steady demand both in London and Calcutta. The industry is said to be now on a thoroughly sound footing in Chittagong, bad gardens have been weeded out, boundary disputes have been settled, and tea can be made cheaply and of good quality. The supply of labour was ample. The manure most commonly used was cow-dung, but alluvial deposit, oil-cake, and bone-dust were also employed. The total outturn was 115,676lb more than last year, but owing to the difference in the number of gardens that furnished reports, no comparison can be made with the figures for 1884. The highest yield per acre was 442lb, and the average 283.582lb, against 258lb last year, or a decrease of nearly 4½lb per acre. In the Hill Tracts the area under mature plants remained unchanged, but the outturn increased from 14,977lb in 1884 to 22,127lb, and the average per acre from 166.42lb to 245.85lb.

In Lohárdagá the number of gardens remained unchanged, but one garden of 400 acres produced no tea. There was an increase of 293 acres 1 rood in the area under plant, as compared with 1884, of 117,152lb in the total outturn, and of nearly 24lb in the average yield per acre. The heaviest crop per acre was 488lb. In Hazaribagh there was a slight decrease of 29 acres in the area under plant. One garden of 45 acres under immature plant produced no tea. The outturn was 23,962½lb more than last year's, and the average per acre nearly 30lb greater. The season was generally good, and favourable rates were obtained in the market. The supply of labour in Lohárdagá was sufficient, but scarcity was felt in Hazaribagh, owing to emigration.

The six gardens in the Dacca district produced 4,853lb of tea, against 3,828lb last year, and the average yield per acre rose from 125·05lb to 158·53lb. The area under tea remained

Dacca.

the same as in 1884.

The season was a good one in this Division, and higher prices were obtained for the crop than in 1884. There was also a large increase in the outturn. In Jalpaiguri the

Rājshahi.

number of gardens increased by 17, the area under tea by 4,085 the total outturn by 910,115lb as compared with the figures for 1884. The average yield per acre was also over 50lb greater. The figures for this district in 1884 is reported to be 349·62lb given for this district in 1884 is reported to be 349·62lb. The figures have been furnished by the Commissioner, showing that the average should be 367lb.

Tea seed has hitherto been obtained from Assam and Cachar, but the gardens will, it is stated, soon be in a position to supply local requirements, and, in fact, during 1885, some of the gardens were able to sell tea seed at from Rs. 25 to Rs. 40 per maund. Steam ploughs are not used, and the leaves are plucked and dried without the aid of mechanical appliances, but the larger gardens use machinery for rolling and preparing the leaf. The ordinary rates of wages in the district are Rs. 6 per mensem for men, Rs. 4-8 for women, and Rs. 3 for children; but industrious workers can earn about a third more. There is no special law to regulate the importation of labourers, nor are they employed under any contract which makes it obligatory for them to serve for specified periods.

The Deputy Commissioner remarks that when the survey of tea lands, which is now being made on the blocking system, reaches the fertile tracts of unreserved forests, there will probably be many applications for land for tea cultivation.

In Dārjiling the number of gardens increased by four, the area under tea by 2,977 acres, and the total outturn by 1,134,311lb. The average yield per acre also increased from 273·15lb in 1884 to 295·41lb in 1885. The other conditions of the tea industry in this district remained unchanged, except that a partially successful effort was made by planters to reduce the rates of wages to their labourers to Rs. 5 per man, Rs. 4 per woman, and Rs. 2 for children during the non-manufacturing months. The reduction was not anticipated by the coolies and took them by surprise, and the real results cannot be known till the experiment is repeated next year.

Coffee cultivation can hardly be called an industry in Chittagong. In the Hill Tracts three-fourths of an acre yielded 330lb. Two maunds raised in the Chittagong district obtained a third class certificate at the International Exhibition held at Calcutta in 1883-84.

The results obtained at the only coffee plantation in Lohárdagá were discouraging; the average yield per acre fell from 51·2lb in 1884 to 30·7lb in 1885.

The most important feature of last year's operations was that the planting of Cinchona was entirely confined to yellow bark trees, no red bark having been put out anywhere. One hundred and eighty-seven thousand plants of the hybrid variety, and 239,000 of *Calisaya Ledgeriana*, were planted out. There are now over five millions of trees of various ages in the plantation, namely, red (*Succirubra*) 2,932,000, yellow (*Calisaya Ledgeriana*) 1,325,118, yellow (*Calisaya Verde* and *Morada*) 183,300, hybrid 572,100, and other kinds 25,093. The crop of the year was not large, having amounted to 205,410lb of dry bark, of which 181,280lb were red, 15,950lb were *Calisaya*, and 8,180lb were hybrid bark. The bulk of the crop was, as usual, made over to the febrifuge factory.

The expenditure on the plantation amounted to Rs. 79,728-2, against the budget allotment of Rs. 97,805. Of this, Rs. 12,052-9-9 represents the capital expenditure on the young trans-Teesta plantation at Rungjung, which has not yet come into bearing; and the balance Rs. 67,675-8-3, the working expenses of the old plantations at Mungpoo, including Rungbee and Sittong. The capital account is thus brought up to Rs. 10,96,255; but, as has been explained in previous years, this has been recouped by the saving effected by the substitution of cinchona febrifuge for quinine in Government medical institutions.

The demand for the febrifuge was considerably less than in previous years. The outturn from the factory, which is regulated by the demand, accordingly fell from 6,464lb in 1884-85 to 4,743lb during 1885-86—namely, 4,625lb of ordinary and 118lb. of crystalline febrifuge. Certain improvements devised in the method of working the factory, and the introduction of grinding machinery, have raised the percentage of febrifuge obtained from the bark to three per cent. The cost of manufacture, however, rose to Rs. 12-11-2 per pound of ordinary febrifuge, and Rs. 19 0-9 per pound of crystalline febrifuge. The rates exceed those of the preceding year by five annas per pound in the case of the former, and by eight annas per pound in the case of the latter. This was entirely due to the smaller quantity manufactured.

The issues during the year were less than in 1884-85 by 1,653lb, as will be seen from the table below:—

		1884-85.		1885-86.	
		lb	oz.	lb	oz.
To Medical depôt, Calcutta	...	2,024	8	1,419	8
„ ditto, Bombay	...	500	0	Nil.	
„ ditto, Madras	...	20	0	Nil.	
„ Inspector-General of Civil Hospitals, Bengal (for district medical officers of Bengal)	...	571	0	587	8
„ Inspector-General of Jails, Bengal (for jails and lock-ups in Bengal)	...	61	0	77	8
Sold to the public	...	3,965	8	3,413	4
Given as samples	...	10	4	2	0
Total	...	7,152	4	5,499	4

The decline in the issues is entirely due to the presence, at the depôts at Calcutta, Madras, and Bombay, of the large quantity (7,000 pounds) of London-made febrifuge sent out for sale under instructions from the Secretary of State. Three thousand five hundred pounds of this have been made over to the Bengal depôt, while 1,750 pounds have been distributed to the depôts at Madras and Bombay respectively; and until these large supplies are absorbed, the demand for the Mungpoo febrifuge must continue to be limited. The decrease in the sale of febrifuge to the public is due to the extremely low price (Rs. 2-1 per ounce) at which quinine was obtainable in the market during the year. It is, however, anticipated that the depression in the price of quinine, which is due to special causes, will not last.

The revenue derived from the sale of the febrifuge, seed, plants, and bark amounted to Rs. 93,476-14, against Rs 1,24,225-2 in the previous year—

		RS.	A.	P.
By sale of febrifuge, seed, plants, and bark to the public...		58,594	14	0
By credit from the Medical depôt, Calcutta	...	23,663	8	0
Ditto	Inspector-General of Civil Hospitals, Bengal	9,835	0	0
Ditto	Inspector-General of Jails, Bengal	1,383	8	0
Total	...	93,476	14	0

The actual profit exhibited on the year's working amounts to Rs. 30,220-15-2. It is said that in addition to this should be taken into account the 2,054lb of febrifuge supplied to Government medical institutions in substitution for quinine, the value of which, at the most moderate calculation, amounts to Rs. 33,000.

Forty-seven mills and factories of all kinds, employing over 40,000 hands, were at work in the 24 Pergunnahs during the year. The jute and cotton industries continued in a depressed condition; and the production of gunnies in the jute mills has been much curtailed in order to reduce the glut of stock in the market.

GENERAL ACCOUNT OF MANUFACTURES AND MINES IN THE DIFFERENT DIVISIONS.

Presidency Division.

As regards the cotton mills, the Collector reports:—

“The previous year had bequeathed to a trade embarrassed by the over-production occasioned by the starting of new spindles the remains of about the worst crop of Bengal cottons which had been grown for many seasons, and

at the outset prospects were not encouraging. Many mills restricted their output by reducing the hours of labour, and the production was still more curtailed by strikes against a reduction of $12\frac{1}{2}$ per cent. in wages, which was necessitated by the depressed state of the trade and very generally enforced. With the rains, as usual, a better demand sprang up; prices of yarn advanced, and when new cotton came to market in November, the industry was established on a firm basis. The new Bengal cotton showed good quality at first, but rapidly deteriorated. Fortunately the abundance and cheapness of Bombay cotton largely compensated for this; and though the consumption of yarns fell off when the hot weather set in, the year ended with fairly encouraging prospects. Full time working with artificial light has been resumed in the cold weather, and the production has been larger than ever. It is therefore very unsatisfactory to note that the temporary closing of an important outlet for Calcutta yarn in Burmah, owing to the troubles in that country, has seriously hampered the trade, which has, moreover, to compete with ever-increasing imports of Bombay spinings. The tendency of the Bombay competition apparently is to drive the Calcutta mills on to the coarser number of yarns, since Bombay, with its splendid selection of cotton, better climate, and better work-people, can spin 20s. cheaper than Calcutta."

The silk industry of Murshidábád is also depressed, owing to the competition of other silks in the European market. Good prices were realised for the indigo of Nadiyá, Murshidábád, and Jessor; but in the two latter districts the season was unfavourable and the outturn was small. Sugar continues to be largely manufactured in the Bussirhat and Baraset subdivisions of the 24-Pergunnahs, and in Nadiyá, Khulna, and Jessor. In the last-named district there are over 250 sugar factories, which are estimated to have turned out 3,35,448 maunds of sugar. Excellent pottery is made on the bank of the Ichamati in Khulna, and specimens have been sent to the Indo-Colonial Exhibition in London.

The outturn of indigo diminished in Bhagalpur and Monghyr, but for the loss thereby occasioned compensation was in part made by an enhancement in the price of the manufactured article. There are signs of a revival of indigo cultivation in Maldah. The silk industry of this district is in a state of decay, and the Commissioner places the tussur and bafta industry of Bhagalpur in the same category. This would at first sight appear inconsistent with the present brisk European demand for tussur, but it is understood that this demand is largely supplied by French manufacturers, who import tussur silk in the raw state and weave it into cloths in France. The manufacture of bidri work in Purneah is said to be gradually dying out.

The Deogarh copper mine is still in an experimental stage. Only two coal mines in the Government estate of the Damin-i-Koh were worked during the year.

There are no other mines at work in the Division. Copper, talc, coal, antimony, iron, silver and lead are said to abound in the Banka subdivision of the Bhagalpur district, but the zemindars are too greedy and rapacious in their demands, and so deter those who would make experiments; and are too deficient in enterprise and knowledge to undertake anything themselves. This obstacle to the development of the mineral resources of the Division was commented on in the last year's report.

Mr. Ambler, who has successfully worked slate quarries in Monghyr for some years, has started a patent enamelling process by which slates are made up to resemble granites, serpentine marble, &c. Specimens will be in the market in the course of a few months.

There is a considerable amount of stone quarrying carried on in the Santál Pergunnahs, both along the chord and loop lines. Some of the quarries belong to Government, but the great bulk to private individuals. These quarries give employment to considerable number of labourers; but though the wages are high, they do not attract the amount of labour the quarries are capable of absorbing. This is due to the monotonous and severe character of the labour required. The Deputy Commissioner says that many of the quarry farmers with large contracts are willing to employ as many as 4,000 or 5,000 labourers a day, if they could get them.

The principal manufacture in this Division is tea, which has been separately noticed. The manufacture of gunny-bags in Dinagepur is steadily decreasing, and they are being supplanted by mill-made bags. Molasses is made in large quantities, and is a thriving industry owing to the impetus given to the cultivation of sugarcane by the introduction of sugarcane mills. There was a falling off in the silk production; and in view to stimulating this industry, an exhibition of silk cocoons was held in Rámpur Beauléah in January 1886. There was an increase in the manufacture of indigo. The manufacture of country cloth seems inclined to recover from the depressed state into which it had fallen. A brewery has been opened at Sonada in the Dárjiling district, which can turn out 700 hogsheads a month during the season from April to November. Last year it only supplied liquor to the Military Department. The copper mine at Suruk was flooded, and did not work during the year. The mine at Rhenak in Sikhim continued to employ about 100 labourers daily.

There are no mines in this Division. As regards manufactures, there is little to add to what was reported in previous years. In Bákarganj two steam oil-mills have been started at Jholakatty, where also the manufacture of glass lamps and tumblers has been commenced. An enterprising potter of the Goalundo subdivision of Furreedpore is making very fair pipes of 12" diameter, which are useful for village roads.

Indigo is extensively manufactured in all districts of the Division, except Patná, where there is none, and Gáyá, where there are only two small factories under native management.

In Sháhábád the industry has gradually declined of late years, partly in consequence of successive unfavourable seasons and general depression in the trade itself, and partly owing to scarcity of land by the extension of canal irrigation. A system of indigo cultivation called *jumawa* prevails in this district, under which the crop is sown in February or March and "forced" by artificial irrigation.

In Muzaffarpur the cultivation of indigo continues to increase, and in 1885, 80,000 bighas were under indigo, against 69,000 in the previous year.

Considerable tracts of country have recently been let in *ticca en masse* to indigo-planters by zamindars, who wish to draw an income without trouble as absentees; for example, the Chowdhry of Nanpur.

The outturn of indigo in Durbhanga was a poor one in the year under report. In Sarun there are 53 indigo factories, including outworks. The total area under indigo was 61,200 bighas, against 55,680 during the preceding year, and the outturn was 10,500 maunds, against 8,500.

In Champáran the outturn of indigo was a little larger than in the preceding year, but the rise in the price of indigo in the Calcutta market gave a considerable rise in the value.

The Lieutenant-Governor has, during the period of his administration, given close attention to the important subject of indigo cultivation in Behar, and it has been his object to promote the permanent interests of this most valuable industry by removing the abuses to which it is open. In this he has been ably supported by Mr Halliday and the responsible officers of Behar, as well as by the Behar Indigo Planters' Association, and it is with much pleasure that Sir Rivers Thompson recognizes the success which has attended their efforts, and the satisfactory relations which have been established between planters and cultivators. It is understood that the cultivation of indigo now rests on a sound commercial basis, and is advantageous to all parties. Indeed, it may be hereafter impossible to conduct it on any other principle, as the ryots, it is to be hoped, will be in a position to protect their own interests.

The other manufactures of the Division are, excluding the opium monopoly, sugar, saltpetre, tobacco, and paper. The accounts as to sugar are favourable, the three factories in Gáyá are doing well, while the introduction of hand turbines in Sháhábád has resulted in an increased manufacture. In Sarun several refineries, closed last year, were re-opened.

There has been a marked decrease in the manufacture of saltpetre and sulphate of soda in the Muzaffarpur and Sarun districts. The trade seems to be

declining, and is not likely to revive under the present revenue rules, which do not favour the petty manufacturers of crude saltpetre, and therefore also do not favour the development of the trade in refined saltpetre, which depends on the supply of crude saltpetre. In Durbhanga and Champáran also there has been a decrease in the outturn of saltpetre and sulphate of soda. * * *

The tobacco factory at Poosa, in the Durbhanga district, continues to be kept up, but it is doubtful whether it has proved successful.

Paper manufacture, in Sháhábád and Gáyá, is on the decline, and fast succumbing to the competition of machine-made paper turned out at the Couper Mill at Lucknow.

The number of mills at work in Sháhábád during the past year was only 9, against 22 of the previous year.

The mineral resources of the Division—the coal of Talcher and Angul, and the iron said to exist in some of the hilly tracts—must remain unexplored until the extension of the Indian railway system to Orissa makes it profitable to develop them; and beyond the gold and filigree work of the Cuttack town, which is rather an art than an industry, there are no manufactures worthy of the name.

Sales of locally manufactured salt fell off in Cuttack and Balasor, and the net receipts decreased in the former district by Rs. 39,998, and in the latter by Rs. 30,305. In the case of Cuttack the Commissioner considers that the decrease is due to illicit trading, while the Balasor manufacture is a dying business, kept up only on account of large illegitimate profit to which it serves as a cloak. The Orissa Salt Department has now been transferred to the Commissioner of Salt Revenue, Madras. There was an expansion of sales in Purí owing to reduction of prices, and the net revenue increased by Rs. 23,483.

The tea industry in Chittagong has been noticed separately. Only two sea-going vessels were built, and owing to the low rates of freight the year was not a good one for brig-owners. A specimen of the limestone found in the Sungoo valley subdivision, which was locally supposed to be inferior, proved on analysis to be calcareous tufa, the purest limestone. This discovery should lead to useful results. The districts of Tipperah and Noakhally are entirely agricultural and possess no manufactures.

The large export of raw tussar silk to Europe for the purpose of manufacture has raised its price throughout the Division, and seriously affected the tussar silk-weaving industry. In Mámbhúm many of the silk-weavers have taken to weaving cotton cloth, for which a demand is said to be reviving “on account of the increasing dislike to the flimsy nature of the European piece-goods.” In Hazáribágh and Lohárdagá new lac factories have been opened, but prices continuing low, the result has been overproduction and further stagnation.

Three new indigo factories were opened in Mámbhúm, and 85 maunds were manufactured, against 46 in the previous year. The output of coal during the past year from the important collieries of this Division was considerably larger than in 1884-85.

The mica mines of Hazáribágh continued to be worked, and the new Baragunda copper mine has proved a great success up to the present time.

The manufacture of silk continues to decline owing to low prices and the inferior quality of the cocoons. It is to be hoped that the interest aroused in England by the Indian

Silk Courts at the Indo-Colonial Exhibition may have some effect in stimulating this languishing industry. Tussar silk is an exception to the general rule there is now a steady demand in Europe for cloth manufactured from tussar cocoons, and large importations of the cocoons are made from Chutiá Nágpur into the chief centres of the industry in Bardwán, Bánkura, and Bírghúm. The jute industry is still in a depressed state; two mills were closed during the year, and there was a considerable falling off in the outturn from those which remained open. The two cotton mills in the Howrah district yielded a better outturn than in 1884-85. The year was unfavourable for indigo, but there was no marked change in the yield of the manufactured dye. The shell-lac industry, which has its centre at Sonamukhi in Bánkura, where there are some

75 factories, continued fairly brisk during the year, but owing to reduced prices the outturn showed a slight falling off. The manufacture of brass and bell-metal utensils progressed actively in Bardwán, Bírbehúm and Bánkúrá; but in Midnapur and Húglí this business was very dull. Some specimens of the fine mats made in Midnapur were sent to the Indo-Colonial Exhibition. The Rániganj pottery works turned out a smaller value of products than in 1884-85, owing mainly to the stoppage of Government works. There was a slight falling off in production at the Government Iron Works at Barákhhar, and private firms also complain of a falling business. The Stone Company at Barákhhar have removed their head-quarters to Mirzapur in the North-Western Provinces, in consequence of the exorbitant royalty demanded by the Barákhhar zemindars. The output of coal from the Rániganj mines was slightly less than in the previous year, owing to the depression of the coal trade for the first nine months of 1885-86. There was one serious accident at the mines—a boiler explosion—resulting in the death of eight persons

Trade.

THE subjoined statement shows the total value of the sea-borne trade of the Bengal Presidency, exclusive of Government transactions, during the past five years:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.

Total of Exports ...	40,93,89,618	42,46,65,199	43,56,07,096	39,92,99,926	40,85,10,234
GRAND TOTAL ...	68,19,84,247	70,83,91,011	73,62,56,388	70,21,51,840	68,72,16,029

Apart from Government transactions, the imports of the foreign trade of Foreign trade of the port of Calcutta declined from Rs. 24,07,73,371 to Rs. 22,59,51,097, and the exports from Rs. 32,15,49,602 to Rs. 32,14,62,739. Slight changes are observed in the proportions which different countries contribute to the foreign trade of Calcutta. Thus the share taken by the United Kingdom has increased from 64·01 per cent. to 64·48 per cent., the trade with Hong-Kong has risen from 10·04 per cent. to 10·90 per cent., and that with Treaty Ports from 1·46 per cent. to 1·72 per cent. The United States, Ceylon, Australia, and Austria have, on the other hand, lost ground. The transactions with the United Kingdom, which were, as usual, more than three-fifths of the entire trade of the port, fell off by over 69½ lakhs. The proportion of the foreign trade of Calcutta carried through the Suez Canal was 62·6 per cent., against 63·3 per cent. in 1884-85.

The imports of cotton twist and yarn show a falling off in value from Rs. 1,14,31,626 to Rs. 99,61,309, and in quantity from 15,300,173lb to 14,348,264lb. At the same time, the total value of the imports of piece-goods of all kinds declined from Rs. 11,05,18,170 to Rs. 10,87,52,904.

IMPORTS.

Cotton twist and yarn and cotton piece-goods.

Metals.

Machinery and mill-work.

Mineral oils.

Liquors.

The total value of metals shows a falling off of Rs. 21,61,699, or 10·3 per cent. The decrease occurred chiefly in unwrought copper and wrought-iron.

Machinery and mill-work show a decline from Rs. 66,77,062 to Rs. 39,61,495.

The trade in mineral oils was very dull during the last year, 11,614,433 gallons having been imported, against 17,282,047 gallons in 1884-85.

The imports of malt liquors have advanced in quantity from 436,303 gallons to 560,228 gallons, and in value from Rs. 10,87,848 to Rs. 13,21,676. Spirits, like malt liquors, show a marked increase both in quantity and value. In the total importations of wines and liquors there has been a small decrease of 540 gallons in quantity, and an increase of Rs. 68,989 in value.

The trade in corals has fallen off from 151,892lb to 119,841lb in quantity, and from Rs. 16,17,434 to Rs. 10,94,257 in value.

Corals.

The imports of tea from Hong-Kong, the Straits Settlements and other countries show an increase of 122 per cent., though the quantity imported is far below the average

Tea.

importations of the years 1881-82 to 1883-84.

The principal articles of export bore the following proportions to the whole of the export trade during the year:—Opium 19½ per cent.; jute, raw and manufactured, 15½ per cent.; tea 13½ per cent.; grain and pulse 12½ per cent.; oilseeds 11 per cent.; hides and skins 8½ per cent.; indigo 8 per cent.; cotton, raw, 3 per cent.; silk, raw and manufactured, 2 per cent.; the rest of the trade, amounting to 6½ per cent., being distributed among a number of minor articles, of which the chief are lac, saltpetre, and castor-oil.

Exports.

The jute crop being deficient last year, the exports of the raw fibre declined by 502,056 cwts. in quantity, and by Rs. 23,42,267 in value. The exports of gunny-bags show a decrease in quantity from 81,626,604 to 62,184,631, and in value from Rs. 1,38,94,455 to Rs. 95,89,549. The prospects of the industry are at present believed to be discouraging.

Jute and gunny-bags.

The trade in rice shows an improvement from 4,953,065 cwts. to 5,537,785 cwts. in quantity, and from Rs. 1,99,16,852 to Rs. 2,38,35,260 in value.

Rice.

The exports of tea have increased from 63,330,228lb to 67,851,749lb in quantity, with a corresponding rise in the total value from Rs. 3,98,18,726 to Rs. 4,23,75,164.

Tea.

But the average declared value per pound was lower than in 1884-85.

Wheat.

The following table shows the exports of wheat from Calcutta for the last five years:—

1881-82.		1882-83.		1883-84.		1884-85.		1885-86.	
Cwts.	Rs.	Cwts.	Rs.	Cwts.	Rs.	Cwts.	Rs.	Cwts.	Rs.
6,66,896	2,52,03,295	4,438,503	1,79,33,850	7,611,414	3,04,27,244	2,561,677	99,91,067	4,189,531	1,52,66,583

The heavy decline in the wheat trade noticed in 1884-85 has been followed by an advance of over 63 per cent. The figures of the last year are, however, still much below the average of the past four years. The exports to the United Kingdom have materially improved. The trade with Franco has entirely ceased on account of the import duty levied in that country for the protection of the home growers.

Indigo.

Indigo shows a falling off of 28 per cent. in quantity and 15 per cent. in value.

A steady advance is observed in the exports of raw hides and skins; in the former there was an increase of 6·5 per cent., and in the latter of 9·7 per cent.

Hides and skins.

The cotton crop of the year being larger and better in quality, the shipments of raw cotton increased from 288,971 cwts. to 416,759 cwts., or 44 per cent.

Cotton, raw.

Lac.

The trade in lac increased by 9·783 cwts.

Sugar, refined.

The exports of refined sugar were 4,229 cwts., against 12,852 cwts. in 1884-85, and 159,996 cwts. in 1883-84.

The imports of gold fell from Rs. 77,76,346 to Rs. 49,35,489, or 36 per cent. The exports, on the other hand, rose from Rs. 2,000 to Rs. 7,04,055. The imports of

Gold and silver.

silver show an increase of Rs. 21,45,821, and the exports a decline of Rs. 27,18,942.

The total imports of the coasting trade of Calcutta fell from Rs. 3,47,94,792 to Rs. 3,13,83,717, while the total exports rose from Rs. 4,56,12,750 to Rs. 4,65,40,221. The

Coasting trade of Calcutta.

advance noticed in the previous year in the imports of cotton twist and yarn has been followed by a decline of 192,460lb. in quantity, but the declared value appears to have been higher.

The total value of the foreign trade of Chittagong has further fallen off from Rs. 83,10,652 to Rs. 82,94,672, representing a decrease in the imports of Rs. 3,76,564, and an increase in the exports of Rs. 3,60,584. The total coasting trade of the port shows a decline of Rs. 7,20,377.

The total value of the trade of the Orissa ports shows a decrease of Rs. 17,30,031, or 9.2 per cent., as compared with the year 1884-85. In the foreign trade of Balasor an improvement is observed, but in the coasting trade the development noticed in 1884-85 has disappeared. During the year under review a further advance has taken place in the foreign trade of Cuttack. The total coasting trade shows, however, a decline of Rs. 2,83,282. Both the foreign and coasting trade of the port of Purí was in a languishing state during the past year.

The total value of the trade of this port considerably diminished during the past year. The imports fell off by Rs. 1,35,840 and the exports by Rs. 13,70,095.

As heretofore, the collection of the statistics of the internal trade of Bengal was limited to the registration of the trade of the ports of Calcutta, Chittagong and Orissa, and of that carried along the chief routes in the province, namely, the Nadiyá rivers, the Brahmaputra and Megna rivers, the Midnapur, Hijili, Orissa and Calcutta canals, and the different railways in Bengal. As regards the inter-provincial road and river traffic, registration at the Karmnassa bridge in the Sháhábád district was commenced on the 1st December 1884, and sufficient information having been collected in respect thereof, the registering station was abolished from the 1st October 1886. With the view, however, of obtaining data for railway extension, a registering station has been opened, with effect from the 1st October 1886, at Sherghati in the Gáyá district, which affords employment to the staff removed from the Karmnassa bridge. Regarding the river-borne trade between Bengal and the North-Western Provinces, the registration, which was commenced in August 1884 at Balia on the Ganges, was discontinued from the 1st August 1886; but the Gogra-borne trade, which is much larger than the Ganges-borne trade, will continue to be registered at Maniar till the 31st March 1887, in order to observe the effect which the development of traffic on the Bengal and North-Western Railway may have on that trade. The arrangement concluded in August 1883 for the registration at Bhojrub Bazar and Dhubrí, under the orders of the Chief Commissioner of Assam, of the boat traffic between Bengal and Assam remained in force during the year under report.

The total quantity and value of the import and export trade of Calcutta by Trade of Calcutta with the interior. internal routes registered during 1885-86, as compared with the figures of the previous year, were as follows:—

SPECIFICATION OF ROUTES.	IMPORTS.		EXPORTS.		TOTAL.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

Cotton, raw.

The trade of Calcutta in raw cotton registered during the past two years was as follows:—

				1884-85.	1885-86.
				Mds.	Mds.
Imports	8,04,529	9,80,125
Exports	4,46,435	6,11,421

The supply imported into Calcutta by all routes was 21·82 per cent. in excess of the figures of the previous year; but it was 22·53 per cent. below the trade of 1883-84. The quantity attracted to the East Indian Railway was 33·45 per cent. more than in 1884-85. The consignments from the North-Western Provinces were 1,56,121 maunds more than in the previous year. The cotton crop there had suffered considerably from the excessive rains both in 1884 and 1885; but the drought which occurred during the latter part of 1885 did much to improve its quality, and in many of the cotton districts, although the crop was not heavier, still it was much finer than in the year 1884.

The total quantity of raw cotton exported from Calcutta during the past year was 36·96 per cent. over the trade of 1884-85, but 34·28 per cent. below that of 1883-84. Almost the whole trade was sea-borne, and its distribution was as follows:—

		1884-85.		1885-86.	
		Cwts.	Mds.	Cwts.	Mds.
To Foreign ports—					
United Kingdom	...	193,049	2,66,844	216,201	2,94,274
Other ports	...	92,922	1,26,477	200,558	2,72,982
Total	...	288,971	3,93,321	416,759	5,67,256
To Indian ports—					
Bombay and other Indian ports	...	243	331	186	253
GRAND TOTAL	...	289,214	3,93,652	416,945	5,67,509

The total quantity of raw cotton not exported before the close of the year under report was 3,68,704 maunds, against 3,58,094 maunds in 1884-85, and 3,34,840 maunds in 1883-84.

The trade of Calcutta in cotton twist and yarn during the past year, as compared with the figures of the preceding two years, was as follows:—

Cotton twist and yarn.

			1884-85.			1885-86.		
			European.	Indian.	Total.	European.	Indian.	Total.
			Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Imports	...	1,86,566	2,36,568	4,23,134	1,74,691	2,09,393	3,84,084	
Exports	...	2,63,198	1,28,584	3,91,782	2,90,627	1,42,151	4,32,778	

The total amount of European twist and yarn cleared for consumption from ship-board and from bond during the past year was 6·42 per cent., and 6·16 per cent. below the figures of the two years 1884-85 and 1883-84.

IMPORTS.

European twist and yarn.

The different ports from which the supplies were received during the past two years are shown in the following statement:—

Whence imported.	1884-85.		1885-86.	
	lb.	Mds.	lb.	Mds.
From Foreign ports—				
United Kingdom ...	14,861,029	1,80,603	14,043,499	1,70,667
Other Foreign ports ...	439,144	5,337	304,765	3,704

From Indian ports—				
Madras ...	9,492	115	400	5
Bombay ...	15,200	185	4,800	58
British Burmah ..	1,200	14	2,450	30
Other Indian ports .	16,486	200	2,100	25
Total of Interportal trade .	42,378	514	9,750	118
GRAND TOTAL .	15,342,551	1,86,454	14,358,014	1,74,489

As regards the twist and yarn manufactured in this country, the figures showed a falling off of 11·49 per cent. on the returns of 1884-85, and of 11·85 per cent. on those of 1883-84. In the case of the sea-borne trade, which for the most part represents imports from Bombay, the fluctuation is very slight.

The exports of European twist and yarn from Calcutta during the past year was 10·42 per cent. over the trade of 1884-85, and 11·57 per cent. over that of 1883-84. The destination of these exports during the past two years was as follows:—

EXPORTS.

European twist and yarn.

Exports by internal routes.

			1884-85.	1885-86.
			Mds.	Mds.

Total	...	7,008,843	85,175	7,485,837	90,974

Principal river marts.

The exports to the principal river marts during the past two years were as follows:—

Marts.		Districts.		1884-1885.	1885-86.
				Mds.	Mds.
Ghattal	...	Midnapur	...	5,302	14,502
Midampur	...	Ditto	...	4,670	6,374
Nadiyá	...	Nadiyá	...	1,385	1,915
Santipur	...	Ditto	...	551	1,584
Húgli	...	Húgli	...	1,249	938

Besides these supplies, the quantity of this class of goods which was sent to the Midnapur district direct from the neighbouring mills without passing the Port Commissioners' wharves, but which was registered on the Midnapur canals, was 21,119 maunds, against 59,899 maunds in 1884-85, and 34,861 maunds in 1883-84.

In return for twist, Calcutta received supplies of country-made piece-goods from the Midnapur district to the value of Rs. 1,47,350, against Rs. 2,52,190 in 1884-85 and Rs. 6,77,450 in 1883-84. The other districts which imported twist and yarn largely from Calcutta during the year were Balasor (47,672 maunds), Dacca (19,082 maunds), Nadiyá (16,922 maunds), Huglí (8,993 maunds), and Farídpur (7,211 maunds).

As regards Indian twist and yarn, the exports from Calcutta rose by 10·56 per cent. as compared with 1884-85, and by 34·23 per cent. as compared with 1883-84. The quantities consigned by the East Indian Railway during the past year were 1,00,263 maunds, against 75,349 maunds in 1884-85, and 54,052 maunds in 1883-84, while the exportation by sea amounted to 31,408 maunds, against 46,590 maunds in 1884-85 and 50,875 maunds in 1883-84.

The total quantity of cotton twist and yarn, both European and Indian, Quantity not exported before exported during the year was 48,694 maunds in the close of the year. excess of the quantity imported, against a surplus of 31,352 maunds in 1884-85 and 57,274 maunds in 1883-84.

Cotton piece-goods. The following statement shows the trade of Calcutta in European cotton piece-goods during the past two years:—

			1884-85.	1885-86.
			Rs.	Rs.
Imports	10,99,70,860	10,81,17,199
Exports	13,77,39,440	12,92,15,085

Piece goods carried by rail and by inland steamer are registered by weight only; the value of this trade is calculated at Rs. 63 per maund, which is taken as the average price in Bengal of piece-goods of all sorts. In the case of these goods carried by country boat, road, and sea-going vessels, however, the figures represent declared values.

The total value of European piece-goods cleared for consumption from ship-board and from bond during the past year showed a trifling decrease of 1·58 per cent. as compared with 1884-85, but a falling off of 4·52 per cent. in comparison with 1883-84. The sources of the supply during the past two years were as follows:—

			Imports by sea.	
			1884-85.	1885-86.
			Rs.	Rs.
Foreign ports—				
United Kingdom	10,86,78,696	10,70,54,533
Other Foreign ports	6,44,324	5,53,715
Total of Foreign trade			10,93,23,020	10,76,08,248
Indian ports—				
Bombay	1,95,776	1,71,792
Madras	70,083	1,01,413
Other ports in Madras	3,260	15,238
British Burmah	47,353	33,590
Other Indian ports	2,850	3,425
Total of Interportal trade			3,19,322	3,25,458
GRAND TOTAL			10,96,42,342	10,79,33,706

The exports from Calcutta during the past year are valued at Rs. 12,92,15,085, showing a decrease of Rs. 85,24,355 as compared with 1884-85, and of Rs. 52,47,185 as compared with 1883-84. This decrease in value last year is

owing to the comparative cheapness of Manchester goods and not to diminished consumption, for, according to quantities, the exports are 7·21 per cent. higher than the figures of 1884-85, and 9·82 per cent. in excess of those of 1883-84. The following statement illustrates the distribution of the past year's exports, province by province, as compared with the figures of the previous year :—

				Exports from Calcutta	
				1884-85.	1885-86.
				Rs.	Rs.

„ Other places	8,712	9,387
Total				13,77,39,410	12,92,15,085

After the addition of 25 per cent. to the total clearances from shipboard and from bond on account of under-statement of values, insurance, landing charges, &c., &c., the total of the year's traffic would be raised to Rs. 13,51,00,625, out of which Rs. 12,92,15,085 worth of goods were exported during the year as shown above. The surplus of imports over exports amounts on this calculation to Rs. 58,85,540.

The amount of the past year's traffic under this head by all routes carried to and from Calcutta during the past two years was as follows :—

				1884-85.	1885-86
				Rs.	Rs.
Imports	60,06,763	53,59,685
Exports	10,08,481	10,95,617

As compared with 1884-85, the import trade showed a decrease of 10·77 per cent., but the export trade showed an increase of 8·64 per cent.

The following statement shows the indigo trade of Calcutta during the past year, as compared with that of the preceding year :—

				1884-85.	1885-86.
				Mds.	Mds.
Imports	1,55,851	1,04,030
Exports	1,47,027	1,04,749

The supply carried to Calcutta was 33·25 per cent. below the figures for 1884-85, and 30·68 per cent. below the trade of 1883-84. The statement below shows all the provinces from which the supply of indigo was derived during the past two years :—

				1884-85.	1885-86
				Mds.	Mds.
Behar	69,841	59,481
North-Western Provinces and Oudh				71,861	30,580
Bengal	12,298	13,123
Other places	1,851	546
Total				1,55,851	1,04,030

The exports showed a decrease of 28·76 per cent. and 30·35 per cent. as compared with 1884-85 and 1883-84 respectively.

The quantity exported by sea during the year was 1,03,735 maunds, against 1,44,622 maunds in 1884-85, and 1,49,774 maunds in 1883-84.

The result of the past year's traffic was a deficit in the imports compared with exports of 719 maunds, against a surplus of 8,824 maunds in 1884-85; in 1883-84 the exports exceeded the imports by 320 maunds.

The jute trade of Calcutta during the past two years is shown in the following statement :—

			1884-85.	1885-86.
			Mds.	Mds.
Imports	1,30,52,436	1,22,82,799
Exports	1,03,65,201	96,33,441

The total quantity carried to Calcutta during the past year was 5·90 per cent. below the trade of 1884-85, but 15·20 per cent. in excess of that of 1883-84.

Principal supplying districts.

The following statement shows all the principal districts which contributed to the trade, the supplies carried by railway being also given :—

DISTRICTS.	Imports by all routes.		DISTRICTS.	Imports by rail.

Total ...	1,30,53,436	1,22,82,799	Total ...	48,79,418	45,57,395

Last year the proportion of imports by rail to the total trade was 37·12 per cent., against 37·37 per cent. in 1884-85 and 30·51 per cent. in 1883-84.

In the export trade there was a decrease of 7·06 per cent. in the supplies carried during the past year as compared with 1884-85, but an increase of 12·51 per cent. when compared with 1883-84. The destination of the raw jute exported by sea from Calcutta is shown in the following statement :—

		1884-85.		1885-86.	
		Cwts.	Mds.	Cwts.	Mds.
To Foreign ports	...	7,305,391	99,43,449	6,803,335	92,60,095
„ Indian	„	58,016	78,966	23,378	31,820
Total	...	7,363,407	1,00,22,415	6,826,713	92,91,915

After deduction of the gross exports from the total quantity imported into Calcutta, there remained a surplus of 26,49,358 maunds, against 26,88,235 maunds in 1884-85, and 20,97,527 maunds in 1883-84.

Quantity not exported before the close of the year.

Gunny-bags.

The gross registered import and export traffic of Calcutta under this head during the past two years were as follows :—

		1884-85. No.	1885-86. No.
Imports	18,196,002	20,626,541
Exports	137,870,318	127,084,964

The supply brought to Calcutta during 1885-86 was 13·36 per cent. in excess of the figures for 1884-85, but it was 15·15 per cent. below those for 1883-84.

The following statement shows all the important districts from which gunny-bags were largely imported into Calcutta during the past two years :—

DISTRICTS.	1884-85.			1885-86.		
	Power-loom.	Hand-made.	Total.	Power-loom.	Hand-made.	Total.
	No.	No.	No.	No.	No.	No.

The export trade was 7·82 per cent. below that of the previous year. The distribution of the sea borne trade was as follows :—

	1884-85.			1885-86.		
	Power-loom.	Hand-loom.	Total.	Power-loom.	Hand-loom.	Total.
	No.	No.	No.	No.	No.	No.
To Indian ports ...	37,100,123	2,661,073	39,761,196	39,566,071	1,988,590	41,554,661
" Foreign " ...	76,708,454	4,918,150	81,626,604	61,687,919	496,712	62,184,631
Total ...	113,808,577	7,579,223	121,387,800	101,253,990	2,485,302	103,739,292

The surplus exports over imports aggregated 106,458,423 bags, against 119,674,316 bags in 1884-85 and 101,166,377 bags in 1883-84. This represents part of the outturn of the mills in Calcutta and the Suburbs.

The total quantity of gunny cloth imported into and exported from Calcutta by internal routes registered during the past two years was as follows :—

		1884-85. Pieces.	1885-86. Pieces.
Imports	34,836	34,122
Exports	284	2,237

The sea-borne trade of Calcutta in this article is shown in yards ; the total traffic during the past two years is given below :—

		1884-85. Yds.	1885-86. Yds.
Imports	48,775	10,731
Exports	19,923,884	25,267,418

There was little or no change in the import trade during the past year by internal routes as compared with 1884-85. Out of the total supply, 5,474 pieces were of power-loom manufacture and 28,648 pieces were hand-made.

After converting pieces into yards at the rate of 80 yards to a piece in the case of machine-made gunnies, and of 22 yards to a piece in the case of hand-made gunnies, the total traffic amounted to 1,078,907 yards, against 1,319,187 yards in 1884-85, and 870,652 yards in 1883-84.

The sea-borne exports from Calcutta advanced by 26·82 per cent. on the returns of 1884-85, while they were more than double those of 1883-84. The details of this trade are shown below :—

	1884-85.			1885-86.		
	Power-loom.	Hand-loom.	Total.	Power-loom.	Hand-loom.	Total.
	Yds.	Yds.	Yds.	Yds.	Yds.	Yds.
To Indian ports	4,597,767	4,597,767	5,182,830	5,182,830
" Foreign	15,249,450	76,667	15,326,117	19,972,307	112,221	20,084,588
GRAND TOTAL	19,847,217	76,667	19,923,884	25,155,197	112,221	25,267,418

If imports be deducted from exports, a deficit of 24,367,471 yards will be found, against 18,627,417 yards in 1884-85, and 10,167,037 yards in 1883-84. The excess of exports over imports is due to the large manufacture of gunnies in Calcutta and the Suburbs.

Besides the registered supplies mentioned above, the consignments of power-loom gunny cloth despatched up-country direct from the neighbouring mills without passing the Port Commissioners' wharves, but intercepted at the toll stations on the Nadiyá rivers, was as follows :—

Importing Districts and Marts.	1884-85. Pieces.	1885-86. Pieces.
Durbhanga	83,900	173,374
Monghyr	74,395	112,195

Purneah	9,845	14,225
Champáran	10,000	7,000
Rájsháhí	3,200	5,675
Muzaffarpur	35,000	5,000
Goruckpur	8,200	3,000
Patná	2,000	2,500
Murshidábád	5,700	2,300
Gházípur	6,400
Mirzapur	4,700
Other districts	1,150	9,950
GRAND TOTAL	258,435	350,841

Last year the number of jute mills at work around Calcutta was 18, against 19 in 1884-85, and 20 in 1883-84. The amount of raw jute worked up during the year in 17 of them was 37,68,892 maunds, showing a decrease of 2·11 per cent., as compared with the previous year, but an increase of 5·46 per cent. in comparison with 1883-84. No statistics, however, are available to show separately how much of the raw material was used in making gunny cloth and gunny-bags.

The comparatively plentiful harvest of the year resulted in a general increase in the food-grain traffic of Calcutta as compared with the transactions of 1884-85, but it still showed a considerable falling off when compared with 1883-84. As regards the imports, the figures exhibit an increase of 14·89 per cent. on the trade of 1884-85, but a decrease of 14·09 per cent. as compared with 1883-84. In the export trade there was an increase of 16·64 per cent. compared with the previous

year, but a decrease of 22·91 per cent. compared with 1883-84. The details of the trade in each staple during the past two years are given below:—

				Imports into Calcutta.	
				1884-85.	1885-86.
				Mds.	Mds.
Rice	1,17,49,985	1,30,80,446
Paddy	20,68,448	14,14,511
Wheat	46,99,141	71,94,330
Gram and pulse	31,47,913	32,91,737
Other spring and rain crops	5,02,594	4,76,669
Total	2,21,68,081	2,54,57,693

				Exports from Calcutta.	
				1884-85.	1885-86.
				Mds.	Mds.
Rice	95,92,375	1,02,23,293
Paddy	6,58,477	5,55,983
Wheat	35,92,135	58,18,560

Of the six staples named above, the only two which showed a falling off in price during the year, as compared with the average of the three previous years, were wheat and lesser millets, the decrease being 7·75 per cent. in the case of the former, and 1·68 per cent. in that of the latter. Under barley the average rise in price was 12·89 per cent., under rice (best sort) 20·03 per cent., under common rice 20·46 per cent.

The import and export trade of Calcutta in this cereal during the past two years is given below :—

Wheat.				1884-85.	1885-86.
				Mds.	Mds.
Imports	46,99,141	71,94,330
Exports	35,92,135	53,18,560

Owing to a brisk demand in Calcutta for export by sea, the imports increased by 53·09 per cent. as compared with 1884-85, but they were still below the trade of 1883-84 by 35·83 per cent.

The following statement shows the places of supply, province by province, during the past two years :—

				1884-85.	1885-86.
				Mds.	Mds.
North-Western Provinces and Oudh	30,81,033	58,68,005
Behar	9,91,048	8,34,906
Bengal	4,60,676	3,74,998
Punjab	1,17,681	95,890
Central Provinces	31,187	12,809
Other places	17,516	7,722
Total				46,99,141	71,94,330

The exports of wheat rose by 22,26,425 maunds, or 61·98 per cent., over those of 1884-85, but they were below those of 1883-84 by 44·33 per cent. The quantities shipped from Calcutta by sea during the past two years were destined as follows :—

				1884-85.		1885-86.	
				Cwts.	Mds.	Cwts.	Mds.
To Foreign ports	...	2,561,677	31,86,727	4,189,531	57,02,417		
„ Indian „	...	7,554	10,282	9,038	12,302		
Total	...	2,569,231	34,97,009	4,198,569	57,14,719		

If exports be deducted from imports, there remain 13,75,770 maunds, Quantity not exported before against 11,07,006 maunds in 1884-85, and 7,60,278 the close of the year. maunds in 1883-84.

The principal staples comprised under this head are *mutter*, *khesari*, *mushuri*, *maskulai*, *moog*, *boot* or *chhola*, and *urhur*.
GRAM AND PULSE.
The total weight of the Calcutta trade in these grains was as follows :—

				1884-85.	1885-86.
				Mds.	Mds.
Imports	31,47,913	32,91,737
Exports	15,50,938	15,44,364

The import trade shows an advance of 4·54 per cent. on the trade of 1884-85, and of ·61 per cent. on that of 1883-84. There was a great demand in Calcutta for these cereals for export to Madras and other ports. The following comparative

statement shows the importation of gram and pulse from the several provinces during the past two years :—

			1884-85.	1885-86.
			Mds.	Mds.
From North-Western Provinces and Oudh			3,07,121	12,06,291
„ Bengal	18,03,624	11,55,546
„ Behar	7,56,455	5,11,984
„ Punjab	46,487	3,38,604
„ Madras	1,95,725	33,340
„ Central Provinces	32,004	31,104
„ Other places	6,497	14,868
Total	31,47,913	32,91,737

The exports were almost equal to those of 1884-85, but they exceeded those of 1883-84 by 2,86,222 maunds, or 22·75 per cent. The exports by sea from Calcutta during the past two years were as follows:—

WHITHER EXPORTED.				1884-85.		1885-86.	
				Cwts.	Mds.	Cwts.	Mds.
To Foreign ports	533,460	7,26,098	250,510	3,53,222
„ Indian	„	„	„	149,786	2,03,876	387,307	5,27,168
Total	683,246	9,29,974	646,817	8,80,390

The exports balance the imports with a surplus amounting to 17,47,373 maunds in 1885-86, against 15,96,975 maunds in 1884-85, and 19,14,360 maunds in 1883-84.

Quantity not exported before the close of the year.

The total quantity of rice and paddy imported into, and exported from, Calcutta during the past two years was as follows:—

RICE AND PADDY.

The stocks of rice at all the markets and warehouses of Calcutta in the first week of April 1886 was 23,99,774 maunds, against 22,92,046 maunds in 1885, and 26,21,179 maunds in 1884. These figures do not include paddy, of which 14,14,511 maunds were imported into, and 5,55,983 maunds exported from, Calcutta during the past year leaving a balance of 8,58,528 maunds, equivalent to 5,36,580 maunds of rice. If this be added to the stocks of rice shown above, the total will be raised to 29,36,354 maunds, against 31,73,278 maunds in 1884-85, and 34,06,545 maunds in 1883-84.

Stock of rice in Calcutta.

The principal staples comprised under this head are barley, *kodo*, *shama*, Indian-corn, oats and millets, which are reaped during the spring and rainy seasons. The amount of the Calcutta trade in these grains during the past two years was as follows :—

			1884-85. Mds.	1885-86. Mds.
Imports	5,02,594	4,76,669
Exports	2,98,674	1,62,693

The import trade of the past year showed a falling off of 5.15 per cent. as compared with 1884-85, but it exceeded the figures of 1883-84 by 60.45 per cent. The following table gives an abstract of the imports, province by province, during the past two years :—

			1884-85. Mds.	1885-86. Mds.
Behar	2,27,043	2,18,952
Bengal	2,41,268	1,90,845
North-Western Provinces and Oudh	30,271	49,946
Other places	4,012	16,926
Total	5,02,594	4,76,669

In the export trade there was a decrease of 45.53 per cent. as compared with 1884-85, but an increase of 24.84 per cent. as compared with 1883-84. The total quantity exported from Calcutta by sea during the past two years is shown in the following statement :—

		1884-85.		1885-86.	
		Cwts.	Mds.	Cwts.	Mds.
To Foreign ports	...	89,223	1,21,413	74,481	1,01,377
„ Indian „	...	1,712	2,330	4,212	5,732
Total	...	90,935	1,23,773	78,693	1,07,109

The surplus of imports over exports amounted to 3,13,976 maunds, against 2,03,920 maunds in 1884-85, and 1,66,797 maunds in 1883-84.

Quantity not exported before the close of the year.

The Calcutta trade in hides during the past year, as compared with the figures of the previous year, was as follows :—

			1884-85. No.	1885-86. No.
Imports	7,999,202	8,145,813
Exports	7,233,447	7,556,945

The import trade of the past year showed an increase of 1.77 per cent. and 24.45 per cent. in comparison with 1884-85 and 1883-84, respectively. The distribution of the imports is classified by provinces in the following statement :—

			1884-85. No.	1885-86. No.
Behar	2,801,531	3,204,300
Bengal	2,615,857	2,606,292
North-Western Provinces and Oudh	1,385,641	1,345,970
Punjab	507,792	433,840
Orissa	287,523	249,400
Chutiá Nágpur	154,912	129,416
Madras	116,827	130,598
British Burmah	122,709	28,050
Other places	6,410	17,947
Total	7,999,202	8,145,813

The number of hides exported during the year was 4·47 per cent. above the trade of 1884-85, and 17 per cent. over that of 1883-84. The bulk of this trade was sea-borne, and its destination was as follows :—

		1884-85.		1885-86.	
		No.	Cwts.	No.	Cwts.
To Foreign ports—					
United Kingdom	...	4,639,363	339,858	4,575,010	340,648

Saigon	...	365	9,945
Total	...	330,084	319,013	89,85,613	86,85,051

The total quantity of indigenous salt imported into Calcutta by the East Indian Railway during the year under report was 332 maunds, against 95 maunds in 1884-85, and 315 maunds in 1883-84.

It will be seen that the decrease last year was 1·13 per cent. as compared with 1884-85, but the figures showed an increase of 4·15 per cent. as compared with 1883-84. The

Exports.

different provinces to which salt was consigned from Calcutta during the past two years are shown in the subjoined statement :—

			1884-85.	1885-86.
			Mds.	Mds.
To Bengal	44,95,934	44,25,431
„ Behar	29,86,987	28,64,395
„ North-Western Provinces and Oudh	3,01,901	4,21,982
„ Assam	3,76,730	3,53,035
„ Chutiá Nágpur	1,80,324	1,51,740
„ Other Provinces	2	956
Total			83,41,878	82,17,539
„ Sea ports	7,540	37,566
GRAND TOTAL			83,49,418	82,55,105

The excess of imports over exports amounted to 4,30,278 maunds, against Comparison of imports with 6,36,290 maunds in 1884-85, and 10,79,605 maunds in 1883-84.

The gross weight of salt on which duty was paid in Calcutta and the 21-Pergunnahs district during the past two years, as compared with the quantity sent into the interior from Calcutta in those years, was as follows :—

	Sea-imported salt.	Excise salt.	Total clearances.	Sent into the interior.
	Mds.	Mds.	Mds.	Mds.
1884-85	... 93,71,086*	11,124	93,*2,210	83,49,418
1885-86	... 90,70,437†	8,135	90,78,572	82,55,105

The total clearances of salt showed a falling off of 3·23 per cent on the returns of 1884-85, but in comparison with 1883-84 the figures showed an advance of 5·65 per cent.

It will be seen that the amount of salt available for consumption in Calcutta, the Suburbs, Huglí, and a part of the 24-Pergunnahs district was 8,23,467 maunds, against 10,32,792 maunds in 1884-85, and 6,66,713 maunds in 1883-84.

The principal salt-importing marts which imported salt from Calcutta to the extent of 1,00,000 maunds during the past year were Patná (8,71,448 maunds), Sirájganj (4,70,497 maunds), Durbhunga (2,54,911 maunds), Ráníganj (1,99,597 maunds), Sahebganj (1,72,409 maunds), Balaganj in Sylhet (1,57,774 maunds), Náráinganj (1,54,421 maunds), Arrah (1,37,023 maunds), Ghattal (1,21,975 maunds), Gayá (1,19,854 maunds), Midnapur (1,14,650 maunds), Jaunpur (1,11,053 maunds), Bhagalpur (1,04,942 maunds), Jhalokati in Bákarganj (1,03,064 maunds), and Doolalganj in Purneah (1,00,821 maunds).

The total quantity of the trade of Calcutta in saltpetre during the past two years is shown in the following statement :—

SALTPETRE.			1884-85.	1885-86.
			Mds.	Mds.
Imports	7,22,952	6,39,678
Exports	6,20,708	5,46,100

The quantity imported by all routes was 11·52 per cent. below the trade of 1884-85, and 15·42 per cent. below that of 1883-84. The following statement shows Imports.

* Including 4,15,994 maunds of Bombay salt, which was passed free of duty.

† Ditto 5,25,983 ditto Bombay and Madras salt, which was passed free of duty.

the imports of saltpetre from the different provinces during the past two years:—

		1884-85.	1885-86.
		Mds.	Mds.
Behar	...	5,07,264	4,55,634

The quantity of mustard seed not exported before the close of the year was 9,85,974 maunds, against 7,65,267 maunds in 1884-85 and 6,62,564 maunds in 1883-84. Quantity not exported before the close of the year.

The following statement gives the total quantity of raw silk imported into and exported from Calcutta during the past two years :—

SILK, RAW.

			1884-85.	1885-86.
			Mds	Mds.
Imports	29,689	24,147
Exports	26,479	22,486

The total decrease under imports was 18·66 per cent. as compared with 1884-85, and ·66 per cent. as compared with 1883-84.

There was a large decrease in the export trade, amounting to 15·08 per cent. as compared with 1884-85, and 14·63 per cent. as compared with 1883-84. The destination of the exports by sea during the past two years was to the following places :—

			1884-85.		1885-86.	
			lb.	Mds.	lb.	Mds.
To United Kingdom	544,657	6,618	333,675	4,055
„ Other Foreign ports	962,837	11,701	1,034,028	12,566
Total	1,507,494	18,319	1,367,703	16,621
To Madras	253,308	3,078	193,007	2,346
„ Other ports in Madras	25,341	308	8,831	107
„ Bombay	32,968	401	27,768	338
„ British Burmah	4,526	55	6,787	82
„ Other Indian ports	7,544	92	3,952	48
Total	323,687	3,934	240,345	2,921
GRAND TOTAL	1,831,181	22,253	1,608,048	19,542

During the year under report the surplus of imports over exports was 1,661 maunds, against 3,210 maunds in 1884-85. In 1883-84, however, the exports exceeded the imports by 2,033 maunds.

Quantity not exported before the close of the year.

The following statement shows the registered trade of Calcutta in drained and undrained sugar during the past year as compared with the totals of the preceding year :—

SUGAR.

			1884-85.	1885-86.
			Mds.	Mds.
Imports	...	{ Drained	3,83,927	3,79,529
	...	{ Undrained	9,92,036	9,31,331
Exports	...	{ Drained	1,82,100	1,63,415
	...	{ Undrained	2,93,337	2,95,770

As regards the imports, the figures under drained sugar showed a decrease of 1·14 per cent. on the trade of 1884-85, and of 24·10 per cent. on that of 1883-84, while those under undrained sugar exhibited a decrease of 6·12 per cent. as compared with 1884-85, and of 11·59 per cent. as compared with 1883-84. The following statement shows the imports of sugar, classified according to the provinces from which it was imported :—

PROVINCES.		Drained sugar.		Undrained sugar.	
		1884-85.	1885-86.	1884-85.	1885-86.
		Mds.	Mds.	Mds.	Mds.
Bengal	...	2,13,863	1,95,372	9,55,111	9,02,199
Behar	...	24,913	20,129	33,667	20,423
North-Western Provinces and Oudh	...	6,378	4,622	2,157	1,054
Madras	...	41,937	44,582	11	5
Bombay	...	4,411	1,218
Other places	...	92,420	1,13,606	1,090	7,650
Total	...	3,83,927	3,79,529	9,92,036	9,31,331

The exports of drained sugar fell off by 18,685 maunds as compared with 1884-85, and by 2,59,772 maunds as compared with 1883-84; while those of undrained sugar increased by 2,433 maunds, but they were still below the figures of 1883-84 by 56,103 maunds. The amount of sugar shipped from Calcutta by sea during the past two years is shown below:—

	DRAINED SUGAR.				UNDRAINED SUGAR.			
	1884-85.		1883-84.		1884-85.		1883-84.	
	Mds.	Cwts.	Mds.	Cwts.	Mds.	Cwts.	Mds.	Cwts.
To Foreign ports ...	17,493	12,852	5,756	4,229	35,150	26,045	3,148	2,313
" Indian " ...	21,559	18,043	35,797	26,300	1,500	3,306	4,870	3,578
Total ...	42,052	30,895	41,553	30,529	39,950	29,351	8,018	5,891

After converting drained into undrained sugar at the rate of one maund of the former to $2\frac{1}{2}$ maunds of the latter, the total of the year's traffic aggregated 18,80,153 maunds under imports, and 7,04,307 maunds under exports. The surplus of imports over exports would thus amount to 11,75,846 maunds, against 12,03,266 maunds in 1884-85 and 9,16,761 maunds in 1883-84.

The total amount of Indian tea carried to and from Calcutta during the past two years was as follows:—

	1884-85.		1885-86.	
	Mds.	lb.	Mds.	lb.
Imports ...	7,17,788	59,063,698	8,05,261	66,261,477
Exports ...	7,77,172	63,950,153	8,33,516	68,586,460

As regards the imports, the figures show an increase of 12.19 per cent. as compared with 1884-85, and of 19.22 per cent as compared with 1883-84. The quantity brought to Calcutta from each province is shown below:—

	1884-85.		1885-86.	
	Mds.	lb.	Mds.	lb.
Assam ...	5,52,839	45,490,752	6,03,320	49,644,617

To Indian ports—				
Bombay ...	211,769	2,574	247,170	3,005
Madras ...	54,816	666	138,562	1,684
Other Indian ports ...	20,510	249	19,013	229
Total of Indian ports ...	287,095	3,489	404,745	4,918
GRAND TOTAL ...	63,617,323	7,73,127	68,256,494	8,29,506

The exports balance the imports with a surplus, amounting to 28,255 maunds in 1885-86, 59,384 maunds in 1884-85, and 53,243 maunds in 1883-84.

The amount of tobacco carried to and from Calcutta by all routes during the past two years was as follows:—

		1884-85.	1885-86.
		Mds.	Mds.
Imports	6,15,243	6,42,847
Exports	4,10,550	4,44,219

The total quantity brought to Calcutta during the past year was 4·48 per cent. above the imports of the preceding year, but 20·15 per cent. below those of 1883-84. The imports of tobacco were drawn from the following provinces:—

		1884-85.	1885-86.
		Mds.	Mds.
Bengal	5,57,859	5,89,672
Behar	41,690	40,039
Madras	5,087	4,615
North-Western Provinces and Oudh	1,767	2,256
Orissa	2,259	1,612
Other places	6,581	4,653
Total	6,15,243	6,42,847

In the export trade there was an increase of 8·20 per cent. in the supplies carried during past year as compared with 1884-85, but a large decrease of 25·50 per cent. when compared with 1883-84. The exports by sea in the years 1884-85 and 1885-86 were as follows:—

	1884-85.		1885-86.	
	lb.	Mds.	lb.	Mds.

Last year the surplus of imports over exports amounted to 1,98,628 maunds, Quantity not exported before the close of the year. against 2,04,693 maunds in 1884-85 and 1,83,618 maunds in 1883-84.

INLAND AND SEA-BORNE TRADE OF CHITTAGONG.

The total quantity of merchandise registered at Chittagong in connection with its inland trade carried by country boats during the past two years was as follows:—

			1884-85.	1885-86.
			Mds.	Mds.
Imports	19,82,753	26,69,925
Exports	6,19,522	7,21,635
		Total	26,02,275	33,91,560

The total value of the inland trade during the past two years is shown below, compared with the sea-borne trade of Chittagong in those years:—

		Imports.	Exports.	Total.
		Rs.	Rs.	Rs.
Inland trade	{ 1884-85 ...	77,29,259	18,78,726	96,07,985
	{ 1885-86 ...	76,45,714	21,66,681	98,12,395
Sea-borne trade	{ 1884-85 ...	1,12,30,570	1,03,16,828	2,15,47,398
	{ 1885-86 ...	94,85,595	1,13,25,446	2,08,11,041

As compared with 1884-85, the total increase in the value of the inland trade was 2.13 per cent., while the figures of the sea-borne trade showed a decrease of 3.41 per cent.

The large increase noticed in 1884-85 under this head was not maintained during the year under report, the quantity imported being 28,084 maunds, against 38,759 maunds in 1884-85, and 10,886 maunds in 1883-84. The Collector of Customs, Chittagong, attributes the decrease to fewer buildings having been erected during the year, and to preference having been given to houses roofed with corrugated iron. As in previous years, Nárainganj, with 27,310 maunds, supplied the largest quantity during the past year.

There was a very large falling off in the trade in caoutchouc, the total exports from Chittagong by coasting vessels amounting in value to Rs. 762, against Rs. 8,480 in 1884-85, and Rs. 10,443 in 1883-84. It is stated that last year the traders were not able to proceed up the Hill Tracts to procure the article on account of the late unsettled state of the Lushai country.

The amount of raw cotton exported from Chittagong by country boats showed an advance of 2,479 maunds and 5,518 maunds over the figures of 1884-85 and 1883-84, respectively; while in the exports by coasting vessels the figures showed an increase of Rs. 18,366 in value as compared with 1884-85, and of Rs. 6,836 as compared with 1883-84.

According to the coast trade returns, the value of the imports into Chittagong was Rs. 1,93,532, showing a decrease of Rs. 26,253 as compared with 1884-85, and of Rs. 30,781 as compared with 1883-84. The falling off is attributed to smaller local demand, as foreign piece-goods are preferred to country-made goods.

The total value of the import trade by coasting vessels under this head was Rs. 17,84,928, against Rs. 18,63,168 in 1884-85, and Rs. 17,04,493 in 1883-84. The decrease as compared with the previous year is not great, and is said to be due to large stocks in hand at the beginning of the year. The value of piece-goods sent by country boats to the interior of the Chittagong district was Rs. 4,15,540, against Rs. 6,00,071 in 1884-85, and Rs. 3,17,611 in 1883-84.

The total quantity of raw jute imported from Nárainganj was 13,02,390 maunds, against 18,53,545 maunds in 1884-85, and 14,81,976 maunds in 1883-84. The amount of raw jute shipped for England from this port showed a decrease of 1,14,650 maunds on the figures for 1884-85, as shown below :—

Quantity in Cwts.	1884-85.	1885-86.
...	1,063,268	979,020
...	14,47,216	13,32,567
...	61,88,602	54,70,413

The total value of gunnies imported by sea-going vessels was Rs. 1,31,617, showing an advance of Rs. 29,608 over the trade of 1884-85, but a falling off of Rs. 49,856 as compared with 1883-84.

The aggregate quantities of rice and paddy carried to Chittagong by country boats during the past two years were as follows :—

	1884-85.	1885-86.
	Mds.	Mds.
Rice ...	7,89,511	11,40,572
Paddy ...	4,26,694	9,61,463

The exports of rice and paddy from this port to foreign countries during the past two years were as follows :—

	1884-85.	1885-86.
Rice ... { Cwts. ...	407,442	623,261
... { Mds. ...	5,54,573	8,48,327
Paddy ... { Cwts. ...	Nil.	6,612
... { Mds. ...		9,000

The quantities shipped for the different customs ports in connection with the coasting trade were as follows :—

	1884-85.	1885-86.
Rice ... { Cwts. ...	146,116	208,255
... { Mds. ...	1,98,795	2,83,458
Paddy ... { Cwts. ...	203,532	432,088
... { Mds. ...	2,77,034	5,88,120

The total quantity of salt imported into Chittagong by sea was 2,69,088 maunds, against 6,30,270 maunds in 1884-85, and 4,53,363 maunds in 1883-84. The quantity of salt exported from Chittagong by country boats during the past two years was as follows :—

	1884-85.	1885-86.
	Mds.	Mds.
To Chittagong ...	1,92,053	1,01,557
„ Noakhally ...	43,649	38,634
„ Other districts ...	4,982	5,306
Total ...	2,40,684	1,45,497

In addition to these supplies, 1,24,786 maunds were sent to Nárainganj by sea-going vessels, against 2,83,002 maunds in 1884-85, and 2,48,860 maunds in 1883-84. The decrease was due partly to the large stocks in Nárainganj at the beginning of the year, and partly to the low rates of freight from Calcutta, which made it cheaper to get salt from that city.

The quantity of Indian tea sent to Calcutta from Chittagong by coasting vessels was 884,649lb, against 853,491lb in 1884-85, and 849,598lb in 1883-84. The quantity sent direct to the United Kingdom was very small, namely, 5,339lb, against 3,847lb in 1884-85, and 786lb in 1883-84.

The total value of tobacco imported into Chittagong by sea-going vessels amounted to Rs. 98,736, against Rs. 83,065 in 1884-85, and to Rs. 1,54,894 in 1883-84. The supply imported from Nárainganj was 20,491 maunds, against 17,238 maunds in 1884-85, and 26,234 maunds in 1883-84. The quantity shipped for foreign ports was 9,673lb (118 maunds), against 16,176lb (196 maunds) in 1884-85, and 70,136lb (852 maunds) in 1883-84.

SEA-BORNE TRADE OF ORISSA.

The following statement shows the total value of the sea-borne trade of the Orissa ports, exclusive of Government transactions, during the past two years:—

DISTRICTS.	IMPORTS.			EXPORTS.			GRAND TOTAL.		
	Goods traffic.	Specie.	Total.	Goods traffic.	Specie.	Total.	Goods traffic.	Specie.	Total.

The following statement illustrates the direction of the import and export trade of the Orissa ports during the past two years:—

	IMPORTS FROM.		EXPORTS TO.	
	1884-85.	1885-86.	1884-85.	1885-86.
	Rs.	Rs.	Rs.	Rs.
Calcutta	90,47,628	81,97,452	52,45,510	40,04,992
Other Indian ports	57,913	91,853	23,31,766	17,97,422
Foreign ports	9,150	55,801	20,76,253	25,86,113
Total	91,15,021	86,48,109	96,53,531	83,87,527

It will be observed that of the import trade Calcutta contributed 98·24 per cent., but the distribution of the export trade was 47·75 per cent. to Calcutta, 21·43 per cent. to other Indian ports, and 30·82 per cent. to Foreign ports.

The most important items of traffic imported into Orissa during the past two years are shown in the following statement:—

PRINCIPAL STAPLES.	QUANTITY.				VALUE.	
	English weight.		Indian weight.		1884-85.	1885-86.

	14,57,137	7,85,120

The trade in European twist and yarn showed a decrease of Rs. 2,77,007 in value as compared with 1884-85, and of Rs. 1,57,608 as compared with 1883-84. The total value of Indian twist and yarn, however, rose from Rs. 2,32,737 in value in 1883-84 to Rs. 5,06,950 in 1884-85, and Rs. 8,33,195 in 1885-86.

This traffic shows a large increase of Rs. 2,08,132 in value as compared with 1884-85, and of Rs. 7,04,408 as compared with 1883-84.

The principal articles constituting the export trade of the Orissa ports during the past two years are shown in the following statement:—

PRINCIPAL STAPLES.	QUANTITY.				VALUE.	
	English weight.		Indian weight.		1884-85.	1885-86.
	1884-85.	1885-86.	1884-85.	1885-86.		
			Mds.	Mds.	Rs.	Rs.
Rice Cwts.	1,971,939	1,754,238	26,83,895	23,87,713	60,07,234	57,89,807

	... { Mds.	5,19,592	3,48,493		

The decrease in maunds under rice aggregated 10·66 per cent. as compared with 1884-85, and 17·77 per cent. as compared with 1883-84. The total quantity of paddy showed a decrease of 1,71,099 maunds as compared with 1884-85, but a considerable increase of 2,99,096 maunds as compared with 1883-84. Of the supplying districts, Balasore contributed 11,85,573 maunds of rice and 3,41,768 maunds of paddy, against 12,68,145 maunds of rice and 5,18,382 maunds of paddy in 1884-85; Cuttack supplied 10,60,941 maunds of rice, against 10,84,685 maunds in 1884-85; and Pooree 1,41,199 maunds, against 3,27,065 maunds.

TRAFFIC ON THE NADIYÁ RIVERS.

The following statement shows the amount of traffic carried on the Nadiyá rivers during the past year, as compared with the preceding year:—

YEAR.	DOWN-STREAM.		UP-STREAM.		Total.	
	Weight.	Value.	Weight.	Value.	Weight.	Value.
	Mds.	Rs.	Mds.	Rs.	Mds.	Rs.
1884-85	70,60,585	2,71,54,373	27,58,470	89,28,468	98,19,055	3,60,82,841
1885-86	63,77,170	2,43,49,413	25,54,700	93,68,117	89,31,870	3,37,17,530

Last year the aggregate quantity of merchandise registered was 9·04 per cent. below the trade of 1884-85, and 9·74 per cent. below that of 1883-84. Compared with the previous year, the falling off in the down traffic was 6,83,415 maunds, or 9·68 per cent., and in the up traffic 2,03,770 maunds, or 7·39 per cent. The returns received from Jungipur and Kishanganj exhibited an increase of 1,32,973 maunds and 1,10,561 maunds, respectively, as compared with 1884-85; while those received from Nadiyá and Hanskhally showed a large decrease of 4,21,696 maunds and 7,09,023 maunds, respectively. The condition of the Jalangá river is still unsatisfactory. Regarding the Mátábhángá route, the falling off of traffic is due to several causes, notably the floods, during the height of which the through traffic was virtually stopped, and the whole country being submerged to the depth of from 5 to 10 feet, large number of boats escaped the payment of toll altogether. Again, large quantities of jute, pulses, &c., from the eastern districts, salt and coal from Calcutta were carried by the river steamers, which, owing to their companies being in competition with the Flotilla Company, carried cargo at rates with

which the country boats could not compete. In October there was a revival of traffic, but it again fell off in November, owing to reports being spread as to the unfavourable state of the river.

The number of laden boats, the cargoes of which were registered during the past year, was 28,929, against 31,014 in 1884-85 and 30,106 in 1883-84.

The quantities and values of the important articles of traffic carried downward during the past two years are given in the subjoined statement:—

The total quantities of rice and paddy registered during the past two years
Rice and paddy. were:—

			1884-85.	1885-86.
			Mds.	Mds.
Rice	14,71,963	13,26,780
Paddy	10,80,833	17,98,383
Total in rice, after converting paddy into rice at the rate of 25 seers of rice to a maund of paddy			21,47,484	24,50,769

The large increase of 7,17,550 maunds under paddy is worthy of notice. The quantity sent to and from Calcutta was 11,98,180 maunds of rice, and 7,44,358 maunds of paddy. The local trade of the different marts within the Midnapur district comprises 1,09,800 maunds of rice and 6,23,187 maunds of paddy.

The quantities sent to Huglí from the Midnapur district were 18,100 maunds of rice and 4,19,792 maunds of paddy.

The local trade of the Huglí district was 85 maunds of rice and 3,095 maunds of paddy, while the trade between Midnapur, Huglí, 24-Pergunnahs, Jessor, and Balasor aggregated 615 maunds and 7,951 maunds, respectively.

TRAFFIC ON THE ORISSA CANALS.

The total quantity and value of traffic carried downwards and upwards on the Orissa canals during the past year, as compared with the trade of the preceding year, are shown in the following statement:—

ORISSA CANALS. *					Weight of goods registered by weight.		Value of all articles of trade.	
					1884-85.	1885-86.	1884-85.	1885-86.
					Mds.	Mds.	Rs.	Rs.
Down traffic	10,08,388	10,37,779	33,79,013	27,19,103
Up traffic	4,76,111	3,96,452	22,33,034	11,39,396
Total					14,84,499	14,34,231	56,12,047	38,58,499

The number of laden boats registered during the past three years was 7,847, against 8,218 in the previous year and 7,965 in 1883-84.

The chief articles of commerce carried along this route during the past two years are shown below:—

NAMES OF ARTICLES.					QUANTITY.		VALUE.	
					1884-85.	1885-86.	1884-85.	1885-86.
					Mds.	Mds.	Rs.	Rs.
Cotton, raw	510	240	7,012	3,840
Cotton twist and yarn (European)	19,586	6,680	10,57,644	3,47,360

It will be seen that the imports increased by 46,12,210 maunds, or 44·15 per cent., and the exports by 26,82,520 maunds, or 25·53 per cent. In the Calcutta block the imports showed an enormous rise of 52·33 per cent., and the exports of 21·81 per cent. The import trade of the Behar block advanced by 14·18 per cent., and the export trade by 26·09 per cent; while in the Western Bengal block the figures showed an increase of 53·06 per cent. under imports, and of 41·77 per cent. under exports. The following statement compares the figures for the principal commodities carried each way during the past year with those carried in 1884-85:—

CHIEF STAPLES OF TRAFFIC.	IMPORTS INTO BENGAL.		EXPORTS FROM BENGAL.		PROPORTION OF CALCUTTA TRAFFIC TO THE TOTAL TRADE.

TRAFFIC ALONG THE STATE RAILWAYS.

The gross amount of traffic conveyed by the different State Railways in Bengal during the past two years, exclusive of railway materials, was as follows:—

		1884-85.	1885-86.
		Mds.	Mds.
Eastern Bengal State Railway	...	1,31,79,237	1,49,84,751
Calcutta and South-Eastern State Railway	...	10,46,918	11,52,912
Northern Bengal State Railway	...	49,24,240	59,19,283
Dacca State Railway	1,35,864
Nalhāti ditto	...	2,50,469	3,56,219
Tirhút ditto	...	44,48,370	52,88,303
Patna-Gayá ditto	...	21,11,083	20,86,005
Total	...	2,59,60,317	2,99,23,336

The amount of traffic carried by the Eastern Bengal State Railway during the past two years, exclusive of railway materials, is shown in the following statement:—

		Downward traffic.	Upward traffic.	Total.
		Mds.	Mds.	Mds.
1884-85	...	87,82,076	43,97,161	1,31,79,237
1885-86	...	96,49,070	53,35,681	1,49,84,751

The following comparative statement shows the quantities and values of the principal articles of traffic attracted to this line during the past two years:—

EXTERNAL TRADE OF BENGAL WITH NEPAL, SIKKIM, AND BHUTAN.

The arrangements for collecting statistics of the external trade on the most important routes of traffic between Bengal and Nepal, Sikkim and Bhutan, remained substantially unchanged during the past year. The registering stations for the Bhutan trade remained unchanged, but on the Sikkim frontier, Rhenok and Kalimpong were substituted for Pheydong from 1st June 1885, and Silligooree took the place of Nuksurbari as a registering station for Nepal trade from the same date.

The total value of the registered trade of Bengal with these three States during the past two years is shown below :—

		Imports into Bengal.				Exports from Bengal.	
		1884-85.	1885-86.			1884-85.	1885-86.
		Rs.	Rs.			Rs.	Rs.
From Nepal	...	72,16,819	93,18,431	To Nepal	...	68,18,097	52,27,817
.. Sikkim	...	3,75,987	6,73,075	.. Sikkim	...	2,01,735	4,96,617
.. Bhutan	...	1,34,189	99,164	.. Bhutan	...	1,43,308	1,00,787
Total	...	77,26,995	1,00,90,670	Total	...	71,66,140	58,25,221

The aggregate value of the registered trade with other provinces which passed through Bengal during those years was —

		Imports into other provinces from Nepal.		Exports from other provinces to Nepal.	
		Rs.		Rs.	
1884-85	1,08,681	2,89,265	
1885-86	2,49,913	2,25,991	

The grand total of the import and export trade brought within the scope of registration therefore during the past two years was as follows :—

YEAR.	Imports.		Exports.		Total.
	Rs.		Rs.		Rs.
1884-85	...	78,35,676	74,55,405	1,52,91,081	
1885-86	...	1,03,40,583	60,51,212	1,63,91,795	

According to these figures, the total value of both sections of the trade of the past year increased by 7·11 per cent. as compared with 1884-85, and by 10·22 per cent. as compared with 1883-84. It will be seen that while the imports showed a large advance of 31·97 per cent. over the figures of 1884-85, and 35·66 per cent. over those of 1883-84, the exports declined by 18·83 per cent. and 16·52 per cent. as compared with the two previous years, respectively.

The total value of the imports into, and exports from, Nepal during 1885-86, exclusive of the trade between that State and other provinces, is compared below with the figures of the previous year :—

YEAR.	Imports from Nepal.		Exports to Nepal.		Total.
	Rs.		Rs.		Rs.
1884-85	...	72,16,819	68,18,097	1,40,34,916	
1885-86	...	93,18,431	52,27,817	1,45,46,248	

The following statement shows, for the past two years, the quantity and value of the principal articles in the import and export trade between Bengal

and Nepal, and does not include the statistics of the trade between that State and other provinces which passed through Bengal:—

NAMES OF ARTICLES.		QUANTITY.			VALUE.		
		Import.	Export.	Total.	Import.	Export.	Total.
					Rs.	Rs.	Rs.
Cattle No.	{ 1884-85 1885-86	29,240 21,284	3,073 3,630	32,313 24,914	7,13,704 5,50,598	75,124 93,654	7,88,828 6,44,252

Wool, manufactured Rs.	{ 1884-85 1885-86	6,090 8,716	1,31,278 1,68,911	1,37,368 1,77,627
Silver "	{ 1884-85 1885-86	85,519 11,19,206	31,763 53,782	1,17,282 1,72,988

It was stated in the last year's report that of the two stations, viz., Runjeet and Pheydong, at which the trade between Bengal and Sikkim used to be registered, orders had been issued to close the latter station, and to open two new ones—Rhenok and Kalimpong: this arrangement took effect from the 1st June 1885. The statistics given in this report therefore relate to the trade registered (1) at

Runjeet during the whole year, (2) at Pheydong during April and May 1885, and (3) at the two new stations during 10 months—June 1885 to March 1886. When the registration of the frontier traffic was started in 1875, Pheydong was considered to be the best point at which to register the Tibetan trade, but since then great changes have taken place, and it no longer possesses the advantages which Rhenok and Kalimpong possess.

The total value of the trade during the past year is compared below with that of the previous year:—

YEAR.			Imports from Sikkim.	Exports to Sikkim.	Total.
			Rs.	Rs.	Rs.
1884-85	3,75,987	2,04,735	5,80,722
1885-86	6,73,075	4,96,617	11,69,692

The aggregate value of the past year's registered traffic was more than double that of the previous year, and more than three times that of 1883-84. This result is no doubt due in a great measure to the opening of the two new stations in place of Pheydong. The increase shown in the import trade was so much as 79·02 per cent. when compared with 1884-85, and more than 200 per cent. when compared with 1883-84. Under exports there was an advance of 142·56 per cent., and 340·61 per cent. over the figures of the past two years, respectively.

The total value of the chief items comprised in the import trade, as registered during the past two years, are given below:—

				Imports from Sikkim and Tibet.	
				1884-85.	1885-86.
				Rs.	Rs.
Ponies	66,720	1,13,320
Cattle	3,046	18,026
Musk	84,100	55,265
Fresh fruits and vegetables	16,061	44,295
Gram and pulse	4,927	10,012
Miscellaneous rain crops	45,164	46,600
Hides of cattle	3,950	6,255
Precious stones and pearls, unset	3,433
Brass and copper	7,320	47,910
Wool, raw	1,536	43,435
Woollen stuffs	31,910	45,479
Yak tails	58,794	1,16,892
Silver	2,927	41,497

The number of ponies imported from Tibet during the past year showed a large increase. Of the total number registered, 1,264 were brought *via* Kalimpong, and 400 through Rhenok. The trade in cattle also showed a great improvement, the number being 696, against 125 in 1884-85 and 252 in 1883-84. Kalimpong registered 412, and Runjeet 173 head of cattle. The value of the imports of musk, which amounted to Rs. 55,265 in the past year, showed a large falling off of Rs. 28,835 as compared with 1884-85, but when compared with 1883-84 a considerable increase of Rs. 52,702 is observed. The decline in the quantity registered is probably due to the closing of the Pheydong station, through which this article used to be imported in large quantities: the entire supply (Rs. 84,100 worth) registered in 1884-85 passed by that station. Of the past year's registered supply, 65·83 per cent. came *via* Kalimpong, and 30·61 per cent. through Rhenok. The largest imports were received during January, February, and March 1886, when Rs. 48,945 worth was registered. The trade in fresh fruits and vegetables showed considerable expansion during the year under report: the quantity received through the Runjeet station during the year was 73·50 per cent. of the total trade. The import trade in gram and pulse is increasing year by year. The quantity brought from Sikkim last year was slightly more than double the figures of 1884-85, and nearly three times those of 1883-84. The past year's trade was carried on almost entirely through Runjeet, which registered 98·27 per cent. of the total imports. For the first time last year precious stones and unset pearls were received from Tibet: the total imports were valued at Rs. 3,433; Rs. 3,163 worth passing through Kalimpong, and the rest through Rhenok. Under brass and copper, the trade during the past year showed an enormous increase, the imports being 123 maunds in 1883-84, 183 maunds in 1884-85, and 1,360 maunds in 1885-86. Kalimpong with 734 maunds registered more than

half the year's trade. The traffic in raw wool showed a great revival during the past year: the imports, which had dwindled from 911 maunds in 1883-84 to 91 maunds in 1884-85, rose during the year to 2,555 maunds. Of the latter quantity, 1,572 maunds were brought *via* Kalimpong, and 816 maunds *via* Rhenok. The value of the supplies of woollen stuffs imported during the year showed a large increase of Rs. 10,539, or 30·16 per cent., as compared with 1884-85, and of Rs. 14,954, or 48·99 per cent., as compared with 1883-84. Of the past year's trade, Kalimpong intercepted 60·30 per cent., Rhenok 30·19 per cent., and Runjeet the rest, viz., 9·51 per cent. The trade in yak tails was very brisk during the year, the value of the imports being Rs. 1,16,892, against Rs. 58,794 in 1884-85 and Rs. 8,924 in 1883-84. The largest supplies were registered at Kalimpong (Rs. 70,629 worth) and Rhenok (Rs. 36,378 worth). The value of silver imported rose from Rs. 2,927 in 1884-85 to Rs. 41,497 in 1885-86. Of the latter figure, Kalimpong registered 80·39 per cent., Rhenok 19·33 per cent., and Runjeet the rest.

The following statement shows the value of the principal articles of export as registered during the past two years:—

		Exports to Sikkim and Tibet.	
		1884-85.	1885-86.
		Rs.	Rs.
Horses, ponies, and mules	52,960
Cattle	...	5,897	14,867
Cotton twist (European)	...	130	5,778
Do. do. (Indian)	...	3,255	2,214
Do. piece-goods (European)	...	71,518	1,63,458
Do. do. (Indian)	...	2,170	7,204
Indigo	...	29,178	26,142
Other kinds of dyeing materials	...	13,389	11,684
Earthenware and porcelain	19,264
Rice, husked	...	5,916	11,171
Brass and copper	...	24,800	22,910
Tobacco	...	21,732	29,472
Woollen piece goods (European)	...	1,993	63,716
All other articles of merchandise manufactured	...	4,960	11,861

This statement shows that for the first time last year horses, ponies, and mules were exported to Sikkim. The recorded number was 642, of which 545 passed through Kalimpong. The trade in cattle is rapidly increasing, the number recorded having risen from 43 in 1883-84 to 243 in 1884-85, and to 573 in the year under report. Runjeet registered 453 during the year. The exports of European cotton twist, which fell from 6 maunds in 1883-84 and 2 maunds in 1884-85, rose in 1885-86 to 107 maunds. Of the latter quantity, 92 maunds were registered at the two new stations, viz., 62 maunds at Kalimpong and 30 maunds at Rhenok. On the other hand, the exports of Indian twist, which rose from 25 maunds in 1883-84 to 93 maunds in 1884-85, fell during the past year to 68 maunds. Cotton piece-goods, both European and Indian, showed an advance over the figures of the two previous years. Under the former head the past year's exports were more than double those of 1884-85, and nearly four times those of 1883-84. Of the total value of the year's exports, viz., Rs. 1,63,458, Kalimpong registered Rs. 95,463 worth, and Rhenok Rs. 40,516 worth. There was a very trifling increase of 3 maunds in the exports of indigo as compared with 1884-85, but when compared with 1883-84, last year's figures show a large increase of 55 maunds. The largest despatches were made *via* Runjeet and Kalimpong, at which stations 64 maunds and 43 maunds, respectively, were intercepted. During 1884-85 there was no export trade in earthenware and porcelain, but in 1885-86 goods valued at Rs. 19,264 were despatched to Sikkim and Tibet, chiefly through Kalimpong and Runjeet, where Rs. 6,292 worth and Rs. 3,854 worth were registered, respectively. The quantity of rice exported during the year was 4,089 maunds, showing an increase of 1,703 maunds and 3,014 maunds as compared with 1884-85 and 1883-84, respectively. Runjeet registered 1,739 maunds, and Kalimpong 1,354 maunds of the past year's exports. The trade in brass and copper, although nearly three times that of 1883-84, was only 5 per cent. in excess of that of 1884-85. Of the total supply during the year, 42·09 per cent. passed by Kalimpong and 40·09 per cent. by Runjeet. The exports of tobacco rose by 48·43 per cent. and 67·78 per cent. as compared with 1884-85 and 1883-84,

respectively. Kalimpong registered 54·77 per cent. of the past year's supply. There was an enormous increase in the value of European woollen piece-goods exported during the year, the value being Rs. 63,716, against Rs. 1,993 in 1884-85 and Rs. 2,930 in 1883-84. The largest exports were made through Kalimpong and Rhenok, which registered Rs. 35,163 worth and Rs. 25,844 worth respectively during the past year. The value of "all other articles of merchandise manufactured" amounted to Rs. 11,861, against only Rs. 4,960 in 1884-85 and Rs. 1,932 in 1883-84. The past year's trade under this head consisted chiefly of beads worth Rs. 4,143, clocks valued at Rs. 2,050, and miscellaneous articles worth Rs. 3,901. The value of the goods which passed through Rhenok during the year was Rs. 6,242, and through Kalimpong Rs. 4,269.

In consequence of the late internal disturbances in Bhutan, there was a general depression in trade during the past year. Trade with Bhutan. In his Administration Report for 1885-86 the Deputy Commissioner of Julpigoree makes the following remarks on the subject:—

"It may be noted that the trade with Bhutan has suffered owing to the late commotions in that State, but with the establishment of a settled and peaceful Government a revival of trade may be hoped for."

This trade was, as in previous years, registered at the three stations in the Julpigoree district, viz, Ambari, Hantoopara, and Baxá. The first two stations were kept open for five months, and the third station for ten months of the year. Hantoopara is the most important station for the registration of the import trade, and Baxá for that of the export trade. The following statement shows the total value of the trade intercepted at the three stations during the past two years:—

YEARS.			Imports from Bhutan.	Exports to Bhutan.	Total.
			Rs.	Rs.	Rs.
1884-85	1,34,189	1,13,308	2,77,497
1885-86	99,164	1,00,787	1,99,951

Compared with 1884-85 and 1883-84, the total value of the traffic during the past year decreased by 27·91 per cent. and 8·84 per cent. respectively. The decline in the value of the import trade in horses, woollen stuffs, madder, vegetables, caoutchouc, ghee, and musk formed a little more than 98 per cent. of the total decrease; while under exports, tobacco, sugar (undrained), European cotton piece-goods, rice and paddy account for over 82 per cent. of the total diminution in value.

The total value of the principal articles imported from Bhutan during the past two years are shown in the following statement:—

				IMPORTS FROM BHUTAN.	
				1884-85.	1885-86.
				Rs.	Rs.
Ponies	29,640	18,400
Caoutchouc	4,002	928
Musk	8,344	6,624
Madder or manjit	12,089	6,072
Fresh fruits and vegetables	39,388	35,723
Ghee	3,187	1,258
Wax	9,169	10,287
Firewood	662	548
Woollen stuffs..	20,635	13,817
Yak tails	1,453	1,293

The following statement shows the value of the principal articles of trade exported to Bhutan during the past two years:—

				EXPORTS TO BHUTAN.	
				1884-85.	1885-86.
				Rs.	Rs.
Cotton piece-goods (European)	21,523	16,064
Rice	24,295	22,112
Paddy	5,236	3,568
Silk stuffs	3,384	1,838
Betelnuts	19,753	19,748
Sugar, undrained	18,906	8,641
Tobacco	38,248	21,870
Woollen stuffs (European)	5,048	1,747
All other articles of merchandise (unmanufactured)	3,412	3,780

PUBLIC WORKS.

Buildings and Roads.

THE outlay of the year 1885-86 on civil and military works amounted to Rs. 84,28,822.

The distribution of this expenditure under the various service heads is shown in the following table, and compared with the grants of the year:—

SERVICE HEADS.	ORIGINAL WORKS.		REPAIRS.		TOTAL.	
	Grant.	Outlay.	Grant.	Outlay.	Grant.	Outlay.
<i>Imperial.</i>	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Military works—						
Works	3,200	2,215	16,900	16,953	20,100	19,168
Establishment	4,600	4,252
Tools and plant	300	276

Provincial ditto	1,45,000	1,78,072	...	492	1,45,000	1,78,619
GRAND TOTAL	84,28,822

Under the head of Imperial Military and Civil works there is a saving of Rs. 42,729, while under Provincial the expenditure exceeded the revised estimate by Rs. 42,652. This latter difference was due to the charges for establishment being in excess of the amount provided in the revised estimate, and to the suspense balances not having been reduced to the full extent anticipated.

Rupees 13,335 and Rs. 1,78,649 were expended during the year from Contributions under Imperial and Provincial services against the revised estimates of Rs. 5,000 and Rs. 1,45,000 respectively.

The outlay on Provincial works during the year was of almost the same amount as that for 1884-85, but it was not possible to appropriate so large a proportion of the grant for original works, because it was necessary to provide for repairing many buildings, the thorough repair of which had been previously postponed for want of funds.

IMPERIAL WORKS.

The old and new opium warehouses in Calcutta have been connected with the municipal unfiltered water-supply. Some improvements were made in the factory at Goolzarbagh, and some of the old roofs were renovated at considerable expense. An estimate for reconstructing the residence of the Sub Deputy Opium Agent at Aliganj has been sanctioned, and a house for the Sub-Deputy Opium Agent has been built at Daudnagar.

At the mint a chimney has been built under the superintendence of the Mint Master.

The office for the Director-General of Post Offices was completed in March 1886. It was commenced in September 1884, and was estimated to cost Rs. 1,90,750. The actual cost has been Rs. 1,76,124. Combined post and telegraph offices have been constructed at Chandbally, Jhowganj (Patna City), and Khulna, and that at Darjeeling, which was formerly a single-storied house, has now been enlarged, and has the telegraph office on the lower floor and the post office in the upper. The new post office at Chuprah, a double-storeyed building on the standard plan, has been completed. A top storey has been added to the post office at Rungpur, and additions and alterations have been made to the offices at Jalpáiguri, Bogra, Madaripur, Dinagepur, Bárdwan, Bánkurá, Barákhár, Huglí, Barísál, and Noakhally. A wire tramway of 400 feet span to convey the mails and mail runner over the river Balasun in the Dárjiling district has been completed.

Workshops and out-offices have been erected at Dullundah. The telegraph store-room at Midnapur has been converted into quarters for the Post Master. The telegraph office at Naraingunge, the construction of which was commenced in November 1884, has been completed. Additions have been made to the Bankipur office, and the signallers' quarters at Chittagong have had alterations made in them.

The Segowlie Cantonment buildings have been demolished. Boundary pillars have been built round the new camping ground at Bandel.

Improvements have been made in the Viceregal buildings in Calcutta and Barrackpur, and petty additions have been made to the Central Press and the Surveyor-General's office.

PROVINCIAL.

The following table shows the outlay that has been incurred under each department of the Administration :—

DETAILS.		Original works.	Repairs.	Total.
CIVIL BUILDINGS.		Rs.	Rs.	Rs.
Provincial Services (Imperial).

The construction of the Judge's court-houses at Maimansingh and Faridpur, which had been stopped in June 1885 owing to want of funds, was continued later in the year.

A dispensary at Dunka was purchased and converted into a circuit-house. Additions and alterations have been made to the Judge's court-house at Howrah, the Judge's record shed at Chittagong, and to the Sub-Judge's and Munsif's courts at Chuprah. The verandah of the Judge's court-house at Bankipur has been rebuilt. But little advance has been made, owing to want of funds, with the Judge's court-house at Patná. The shell of the building, including the roof, has, however, been completed. The double munsifi at Munshiganj was completed. Quadrennial repairs were carried out in the court houses at Bhagalpur and Maldah, and in the circuit-house at the latter place.

The new collectorate building at Jessor and a temporary court-house for the Deputy Commissioner of Jalpaiguri were completed. Towards the end of the year additions and alterations to the Maimansingh collectorate were put in hand.

A sudder distillery was built at Patná. Materials for a masonry wall have been collected at the Chuprah distillery. Ordinary repairs were executed to the excise buildings at Purf; the main building of the Cuttack distillery was thoroughly repaired, and an estimate for the restoration of the out-houses has been sanctioned.

The new Dárjiling offices were completed during the year, and have since been occupied. The "Shrubbery" at Darjeeling was completed.

Defects in the lightning-conductors of the Motshári jail have been remedied. A scheme for draining the grounds of the Barísál jail was taken in hand by jail labour at the end of the year. Alterations in the female ward of the Chittagong jail, and improvements

in the Maimansingh district jail were completed. The works for the conversion of the district jail at Dacca into a central jail were continued, but little further progress was made for want of funds. The scheme of water-supply to the female and juvenile wards in the central jail at Midnapur was carried out.

A part of the land for the Gopalganj lock-up was acquired and paid for. Lock-ups at Rámpur Haut and Ghattal were commenced on the new standard plan. Special

arrangements for female prisoners were made in the lock-ups at Jahánábád and Patuakhally. A sluice has been constructed near the Perozpur lock-up to improve the drainage. Thorough quadrennial repairs were completed in the lock-ups at Jajpur, Nattore, Sasseram, Barh, Lalbagh, Busseerhat, Bagirhat.

Thorough repairs and petty additions were made to St. Andrew's Church at Darjeeling, and urgent repairs to the churches at Pooree and Cuttack. Quadrennial repairs were carried out in the Goolzarbagh and Midnapur churches and in the cemeteries at Patna, Bankipur, and Barh.

An office was built at Barísál for the accommodation of the District Superintendent and his staff. The Naraingunge buildings, which had been destroyed by fire in February 1885, were reconstructed. Special repairs were executed to the police case hospital at Alípur, thorough repairs to the police buildings at Ranaghat, Kishnagar, Chuadangah, Meherpur, Kushtea, and quadrennial repairs to those at Midnapur.

The west portion of the chemical laboratory in the Medical College, Calcutta, was converted into a lecture theatre. Additions and alterations were made to the Military Orphan Asylum at Kidderpur. The new building for the Motihárf school is nearly completed. Two additional rooms with verandah were built to the Government school at Muzafferpur. Materials have been collected for putting a corrugated iron roof over the shingle roof in the upper and lower buildings of the Bhuteah school at Darjeeling. An arched verandah and other additions were made to the Murshedábád high school. Quadrennial repairs were carried out in the schools at Maldah, Chaibassa, and Dinagepur, and in the Patna College.

A laboratory for microscopic investigations was built in the compound of the General Hospital, Calcutta, and additions were made to the Nurses' quarters. Half the buildings of the Surnomoyee Hostel for lady medical students were completed. The Eden Sanitarium at Darjeeling was repaired.

The office at Muzafferpur was made more secure, and alterations were carried out in that at Noakhally.

The inspection bungalow at Farídpur, which was burnt down in February 1885, was reconstructed.

The works on the Sone causeway were continued, and will be completed next year. A large number of boundary pillars were erected on the old Grand Trunk Road, in the

Central Circle, and the new Grand Trunk Road between Phulta Ghât and Barákhar. Stone spurs were thrown out above the Shally bridge to protect the Rániganj and Midnapur road, and a projecting portion of the left bank of the river has been cut away with the same object. Those sections of the Calcutta and Jessore road near Bongong, Jadubpur, and Jessor, which had suffered from the severe flood of September 1885, were put in order. An iron girder bridge was erected on the 29th mile of the Ganges-Darjeeling road. The consolidation of metal on the first section outwards of the Ránchi-Hazáribágh road was completed. Part of the materials for a timber bridge on the Ganges-Darjeeling road have been collected. Two 60-foot span bridges on the Teesta-Sevoke road were renewed, and the metal on the 11th and 12th miles of the Silligooree-Sevoke road consolidated. The Chandbally Strand road was extended from the Tidal Creek bridge to the end of Plot No. 1 at the western end.

The Gumti embankment in the Tipperah district was surveyed. A retired line of embankment to protect the adjoining country from the floods of the Chundun river was commenced

at Banka. A similar embankment to protect the town of Rámpur Beauléah was constructed and carried across to Akra Ghât. This embankment was subjected to a severe strain during the unusually high floods, and it has since been found necessary to strengthen it. The work is still in hand.

Fair progress was made with the Bhagalpur water-works. The head works are now nearly completed, the pumping engines have been erected, and the pipes for the distribution of water in the town are being laid.

Miscellaneous public improvements.

The works will, it is expected, be completed early in 1887. Some alterations were made on the Calcutta race course on the maidan, the cost of which was contributed by the Turf Club. The port water-supply works at Chittagong were completed. A warehouse with a corrugated iron roof was constructed for the use of this port. Experiments have been made at Hazáribágh in the manufacture of tiles. Work was commenced on the foundations of the new light-house to be built on Shortt's Island at the mouth of the Damra, but owing to the isolation of the place and the late date of commencement it was not possible to make much progress. The most difficult portion of the foundations was, however, got in before the breaking of the monsoon. Arrangements have been made for the supply of the light, which is to be a revolving one of the third order, from England.

The cyclone of September swept away all the buildings at Hookey Tollah, and it was decided after the Lieutenant-Governor had visited the place with the Chief Engineer to build a new refuge which would accommodate the public offices, and at the same time provide a place of safety for the inhabitants in case the port should again be visited by a storm-wave. Plans were at once prepared for the work, and it was commenced before the close of the year. It is expected that the refuge will be completed before the next monsoon season.

There were no brick-manufacturing operations during 1885-86, but some experimental kilns and clamps were burnt to ascertain the relative qualities for brick manufacture of the silt deposits at Akra.

Akra brickfields.

The Seebpore Workshops were, as usual, employed in making up wood and ironwork, but the stoppage of almost all building work and the relatively small outlay on repairs reduced the quantity of work to be done. The outlay on manufactures was Rs. 1,10,386, and this yielded a profit of Rs. 31,437.

Seebpore Workshops.

The outturn of pig iron for the year 1885-86 was 5,325 tons. The store on hand at the beginning of the year was 686 tons, and that at the end of the year 677 tons. The bulk of the iron produced during the year was consequently sold or utilised in the foundry. The progress on the new blast furnaces has been good, all that is required to complete them being the fixing of the cup and cone arrangements and the pipes for carrying the blast to the furnaces. The operations of the foundry consisted chiefly of the manufacture of D. O. sleepers and jaws for the North-Western Provinces. A considerable number of pipes were also cast for the Bhagalpur water-works and for private parties, and some bridge cylinders and piles were made for the Tírhút State Railway and the Assam-Bihar State Railway. The number of miscellaneous castings shows a steady increase. Among other articles may be mentioned ploughs and rice-bowls, for which a steady demand is springing up.

Barákhá Iron Works.

Considerable expenditure was incurred during the year in carrying out repairs rendered necessary by earthquakes and floods. On the 14th July 1885 an earthquake occurred, which was more or less severely felt in Calcutta, Dumka, Bhagalpur, Kishanganj, Maldah, Mainam Singh, Rájshahí, Bogra, Rungpore, Bardwán, Huglí, Serampur, Nadiyá, and Berhampur. At the latter place Rs. 8,906 were spent on repairs consequent on the earthquake, and in the Eastern Circle a heavy expenditure was incurred. On the 15th July the Normal School at Chittagong was burnt, and on the 3rd March 1886 the Military Hospital at Cuttack. On the 25th and 26th June a very high flood occurred, breaching the Purí and Ganjam roads. Extraordinary high tides occurred in the Huglí during August, in which month there were also unusually heavy freshets. Some embankments at Akra were breached, and the whole factory flooded. In the same month the sub-divisional residence at Jahánábád (Bardwán Division),

Floods, storms, and accidents.

which had previously been reported to be unsafe and been vacated, collapsed after excessive rainfall. Early in September the Rániganj and Midnapur road was damaged by floods, earthwork and metalling being washed away in several places, as well as the floors and apron walls of some of the culverts. In the Jessor Division a very serious flood occurred in this month. Bongong was for a time under water, breaches occurred in the Calcutta and Jessor road between Bongong and the 20th milestone, and the unmetalled road between Bongong and Chogdah was submerged and damaged. On the 8th September the Ganges near Rámpur Beaulah reached the extreme height of 27 feet 1 inch, *i.e.*, only 2 inches lower than the highest recorded flood, and subjected the embankment to a very severe strain. The embankment was saved by the exertions of the inhabitants and local officials. It has since been strengthened. A cyclone passed over Orissa on the 22nd September, and, besides destroying the buildings at Hookey Tollah, severely damaged that portion of the Orissa Trunk road lying between the Brahmini and Byturni rivers. The tidal wave, which accompanied it, breached the canal embankment near Balasor in several places, but had it not been for this embankment, the wave would have passed over a vast area of cultivated land, and the loss of crops would have been enormous. The dák bungalow on the bank of the Ganges at Caragola Ghât on the Ganges and Darjeeling road was washed away by the river with the bank on which it stood; and slight damages were caused by floods to portions of the Grand Trunk road, and the Giridi-Dumri, Ránchi-Silli, and Parasnath Hill roads. A part of the tuccavee embankment at Banka was carried away by heavy floods in the Chundan river. Unusually heavy rainfalls were experienced in the Midnapur district and at Panchkurah, while the rivers in the Midnapur and Huglí districts were in high flood, causing extensive breaches in the embankments. The Orissa Grand Trunk road was submerged and breached in places; the Chandni Bazar road was also breached; the Rániganj road was overtopped and breached, and the wing walls of No. 12 bridge carried away. The Murshedábád embankment near Laltikari burst, the adjoining country was inundated, and great damage caused to the Eastern Bengal and Bengal Central Railways. Further particulars as to the effects of these floods will be found in the Administration Report of the Irrigation Department. Estimates were submitted, and special sanctions accorded, for the necessary repairs consequent on these occurrences.

The only changes of any importance were (1) the transfer of the charge of the Barákhur Iron Works, which had previously been under the direct control of the Secretariat, to the Superintendent of Works, Calcutta, as one of the divisions under his orders; and (2) the abolition of the Jalpáigurí Division. The sub-divisions of this division have been distributed between the Dárjiling and Rájsháhí Divisions.

Irrigation.

THE following abstract shows the receipts and charges of the Irrigation Branch during the official year 1885-86 as compared with the budget and revised estimates:—

REVENUE.				Budget estimate.	Revised estimate.	Actuals.
				Rs.	Rs.	Rs.
XXIX.—Major Works—Direct receipts—						
Provincial	...			12,00,000	13,50,000	15,84,935
XXX.—Minor Works and Navigation—						
Irrigation and navigation works, provincial				7,97,000	7,97,000	7,18,974
Agricultural works—						
Imperial	...			3,000	4,500	6,804
Provincial	...			3,000	3,000	2,797
Total	...			20,03,000	21,54,500	23,13,510
EXPENDITURE.						
35.—Famine Relief and insurance—						
Imperial	82,000	82,000
48.—Capital expenditure on irrigation works not charged against revenue	...			12,75,000	8,80,000	6,38,487
42.—Major Works—Working Expenses—						
Provincial	...			11,00,000	11,67,000	11,53,416
43.—Minor Works and Navigation—						
Irrigation and Navigation Works—						
Imperial	(-) 1,200
Provincial	...			8,19,100	8,19,000	7,42,171
				8,19,100	8,19,000	7,40,971
Agricultural Works—						
Imperial	...			7,40,000	6,16,500	5,42,744
Provincial	...			1,52,900	1,23,500	3,13,458
Contributions	9,160	6,871
				8,92,900	7,49,160	8,63,073
Total	..			40,87,000	36,97,160	34,77,947

Besides the expenditure shown in the foregoing statement, a sum of Rs. 1,08,772 was expended during the year, which was charged to "local loans" and "tuccavee," viz., Rs. 88,515 on the Howrah Drainage Project and Rs. 20,257 on embankments.

I.—MAJOR IRRIGATION WORKS.

Capital Outlay.

The total capital outlay (direct charges) on irrigation works not charged to revenue amounted, to end of the year 1885-86, to Rs. 5,69,86,969, against sanctioned estimates aggregating Rs. 6,93,94,955, leaving an unspent balance of Rs. 1,24,07,986 at the close of the year, as detailed below:—

MAJOR IRRIGATION WORKS.				* Amount of estimate.	Expenditure during 1885-86.	* Expenditure to end of 1885-86.	Balance for expenditure from 1st April 1886.
				Rs.	Rs.	Rs.	Rs.
Orissa Canals	...			3,13,96,220	4,67,724	2,20,73,027	93,23,193
Midnapur Canal	...			83,16,768	10,062	82,57,105	59,663
Hidgellie Tidal Canal	...			17,93,270	...	17,95,489	—2,219
Sone Canals	...			2,78,88,697	1,60,701	2,49,61,318	30,27,349
Total	...			6,93,94,955	6,38,487	5,69,86,969	1,24,07,986

* The figures include "loss by exchange," which was not shown in previous reports.

During the year under review the head "Loss by exchange" was first treated as a *direct* instead of an *indirect* charge in the accounts. In the statement given below the indirect charges against capital account to end of 1885-86, of the irrigation works not charged to revenue, are compared with the sanctioned estimates :—

MAJOR IRRIGATION WORKS.	Amount of estimate.	Indirect charges during 1885-86.	Indirect charges to end of 1885-86.	Balance available from 1st April 1886.
	Rs.	Rs.	Rs.	Rs.
Orissa Canals	9,19,625	9,716	4,97,863	4,21,762
Midnapur Canal	1,84,215	36	1,83,582	633
Hidgellée Tidal Canal	44,807	44,807
Sone Canals	13,99,607	3,554	8,88,849	5,10,758
Total	25,48,254	13,306	16,15,101	9,33,153

The charge for interest on direct capital outlay on irrigation works not charged to revenue, for which the Local Government is responsible to the Supreme Government, amounted to Rs. 22,66,610 for the year under review, against Rs. 22,12,626 of the year 1884-85.

Revenue receipts and expenditure.

An abstract of the revenue account of irrigation and navigation works classed as "Major Irrigation works," for the year 1885-86, compared with that of the previous year, is given below :—

NAME OF WORK.	1885-86.			1884-85.		
	Receipts.	Working expenses (direct charges).	Net result.	Receipts.	Working expenses (direct charges).	Net result.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals	2,07,350	3,12,577	(—)1 35,227	1,43,585	3,15,737	(—)1,72,152
Midnapur Canal	2,62,484	2,09,860	52,624	2,57,955	2,23,174	34,781
Hidgellée Tidal Canal... ..	52,455	48,609	3,846	43,507	36,886	6,621
Sone Canals	10,62,646	5,52,370	5,10,276	8,62,474	6,03,961	2,58,513
Total	15,84,935	11,53,416	4,31,519	13,07,521	11,79,758	1,27,763

The total receipts during the year amounted to Rs. 15,84,935, or Rs. 2,77,414 in excess of those of the previous year. The net revenue of the year is more than three times that of the previous year and more than four times that of 1883-84. This is almost entirely due to the great advance made in the Sone Canals.

II.—MINOR WORKS AND NAVIGATION.

Capital Outlay.

These works are divided into two classes—

- (1) Works for which capital and revenue accounts are kept.
- (2) Works for which neither capital nor revenue accounts are kept.

The following statement shows the capital outlay (direct charges) on the first class of these works :—

Works for which capital and revenue accounts are kept.	Amount of estimate.	Expenditure during 1885-86.	Expenditure to end of 1885-86.	Balance for expenditure from 1st April 1886.
	Rs.	Rs.	Rs.	Rs.
Sarun Irrigation Project	6,63,521	3,621	6,69,230	— 5,709
Orissa Coast Canal	34,45,742	4,98,403	34,36,946	8,796
Calcutta and Eastern Canals	— 42,574	51,59,067
Damudah Project (imperial)	1,43,974	—1,200	1,54,741	(—)10,767

Out of the total expenditure on the Orissa Coast Canal, a sum of Rs. 7,82,000 has been from "Famine Relief and Insurance" Funds (Imperial): the remainder of the expenditure has been from Provincial Funds. During the year 1885-86 the amount expended from Imperial Funds on the Orissa Coast Canal was Rs 82,000. A revised estimate of the Orissa Coast Canal, aggregating Rs. 41,16,200 for direct charges, has been submitted to the Government of India.

Revenue Receipts and Expenditure.

The actual receipts and charges during the year 1885-86, compared with those of the year 1884-85, relating to works classed as "minor works and navigation," are shown in the following statement:—

		1885-86. Rs.	1884-85. Rs.
<i>I.—Receipts.</i>			
Provincial -			
Works for which capital and revenue accounts are kept—			
Orissa Coast Canal	...	13,718
Calcutta and Eastern Canals	...	4,79,484	5,69,726
Sarun Canals	...	41,143	9,341
Works for which neither capital nor revenue accounts are kept—			
Nuddea rivers	...	1,83,781	1,95,457
Eden Canal	...	848	475
Tidal creeks in Orissa	1
Total	...	7,18,974	7,75,000

The decrease was partly due to an actual decrease in revenue, but mainly to an adjustment in the accounts of the Calcutta and Eastern Canals. This was the first year that there were any revenue receipts from the Orissa Coast Canal.

II.—Expenditure.

Works for which capital and revenue accounts are kept—Provincial—			
	REVENUE.	1885-86. Rs.	1884-85. Rs.
Orissa Coast Canal	...	29,881
Calcutta and Eastern Canals	...	1,86,747	2,78,192
Sarun Canals	...	22,751	24,950

Works for which neither capital nor revenue accounts are kept—			
Nuddea rivers	...	77,668	95,776
Eden Canal	...	46,948	43,922
Tidal creeks in Orissa	...	736	11,785
Total	...	1,25,342	1,51,483

III.—AGRICULTURAL WORKS.

The works under this head are mainly embankments. The receipts from these works are for miscellaneous petty items. They have been as follows:—

AGRICULTURAL WORKS.

Works for which neither capital nor revenue accounts are kept—

	1885-86. Rs.	1884-85. Rs.
<i>I.—Receipts.</i>		
Government embankments (Imperial)	6,804	3,919
Tuccavee embankments under contract (Provincial)	2,797	2,818

II.—Expenditure.

	1885-86. Rs.	1884-85. Rs.
Government embankments (Imperial) ...	5,42,744	6,90,401
* Mudhubanee Canal (Provincial) ...	2,044	2,635
Tuccavee embankments under contract (Provincial) ...	3,11,414	1,57,253
Villago channels, &c. (contributions) ...	6,871	11,347
Total ...	8,63,073	8,61,636

TUCCAVEE.

Howrah drainage works ...	88,515	1,25,885
Tuccavee embankments not under contract ...	20,257	27,735
Total ...	1,08,772	1,53,620

The state of account of *Tuccavee works proper* is explained below :—

DIVISION.	Opening debit balance.	Debits during year.	Total.	Credits during year.	Net debit balance at end of year.
	Rs.	Rs.	Rs.	Rs.	Rs.
Northern Drainage and Embankment ...	11,835	5,026	16,861	7,318	9,543

Total ...	30,018	20,258	50,276	27,480	22,796

The transactions of the three circles of superintendence will now be described.

ORISSA CIRCLE.

The following statement compares the expenditure in this circle under the different heads of account for the year 1885-86 with that of the year 1884-85 :—

	1885-86. Rs.	1884-85. Rs.
<i>Capital expenditure on Irrigation works not charged against revenue.</i>		
Orissa canals (imperial) ...	4,67,724	7,73,589
<i>Major works working expenses.</i>		
Orissa canals (provincial) ...	3,42,577	3,15,737
<i>Minor works and navigation for which neither capital nor revenue accounts are kept.</i>		
Tidal creeks (provincial) ...	736	11,785
<i>Agricultural works for which neither capital nor revenue accounts are kept.</i>		
Orissa embankments (imperial) ...	1,79,605	1,70,403
Channel and spur works, &c. (contributions) ...	412	3,502
Aul embankment maintenance (tuccavee) ...	1,838	3,694
Total ...	9,92,922	12,78,710

I — MAJOR IRRIGATION WORKS.**ORISSA CANALS.**

The following statement shows by main heads the outlay charged to the capital account of the Orissa canals during the year 1885-86 compared with the year 1884-85 :—

	1885-86. Rs.	1884-85. Rs.
Head works ...	2,324	18,849
Main canals ...	2,29,301	4,27,688
Distributaries ...	38,548	41,750
Drainage and protective works ...	1,01,905	1,27,261
Cadastral survey	52
Total ...	3,72,078	6,15,600

* Formerly called the Teur Canal.

			1895-96. Rs.	1894-95. Rs.
Establishment	69,151	12,600 ²
Tools and plant	33,482	41,904
Suspense accounts	—5,985	—7,194
Loss by exchange
Total	96,648	1,60,712
Total of all charges	4,68,726	7,76,312
Less receipts on capital account	1,002	2,723
Net total	4,67,724	7,73,589

The amounts provided in the budget and revised estimates for expenditure on the Orissa project during the year chargeable to capital were Rs. 9,25,000 and Rs. 6,25,000, respectively. Compared with the revised estimate, the unspent balance is Rs. 1,57,276. Compared with the budget, the unspent balance is more than four and a half lakhs. The short expenditure is mainly due to the fact that it was discovered during the year that many works had been for some time in progress without properly sanctioned estimates, and expenditure on those works was stopped by order of the Chief Engineer. It is also due to deficient payments for land, to some sanctions having been received too late in the year, and to slow progress due to insufficient rates in one of the divisions. The progress made with these important works must be considered to be decidedly unsatisfactory.

The following statement shows the state of the expenditure on "works" and other sub heads of account, as compared with the sanctioned revised estimate of the Orissa project:—

NAME OF WORK.	Amount of estimate sanctioned by Secretary of State.	EXPENDITURE.		BALANCE.
		During the year.	Total to end of 1895-96.	
<i>Mahanuddy Series.</i>	Rs.	Rs.	Rs.	Rs.

Net total	3,13,96,220	4,67,724	2,20,73,027	93,23,193

The Orissa irrigation system is divided into two series of canals—the Mahanuddy series and the Brahmini-Byturni series. The former series embraces all the canals which draw their supply from the head-works on the Mahanuddy river: the latter series those which rely on the weirs across the Brahmini and Byturni rivers.

MAHANUDDY SERIES.

On this series of works a gross expenditure of Rs. 1,75,73,075 is contemplated as the ultimate cost of the works themselves, exclusive, that is, of charges for establishment, and tools and plant, and indirect charges. Of this sum Rs. 1,20,84,549 had been expended at the beginning of the year under review. The expenditure during the year amounted to Rs. 2,78,720. This sum has been spent as follows.

Head-works.

On the Mahanuddy weir a small sum was expended in widening the apron.

The work in progress during the year in the extension of the Taldunda

Taldunda Canal.

Canal was mainly in the excavation of the canal, on which about Rs. 30,000 was expended, and in the preparation of materials for constructing the masonry works. Some progress was made in the actual construction of two or three of the masonry works, but progress was hindered for five months of the year by an order which was issued to stop the works pending sanction to certain estimates. Considerable damage was done to the earthwork of this canal in the 27th, 28th, 38th, 39th and 40th miles by high floods which occurred in June 1885, about 22 lakhs of cubic feet of earthwork being washed away. These floods caused a breach in the Mahanuddy river embankment.

In the revised estimates of the project provision has been made for the expenditure of Rs. 8,25,455 on distributaries from the Taldunda Canal. Very little progress was made during the year; only Rs. 5,357 was expended.

Machgong Canal.

The works on the Machgong Canal extension, which were in full progress, were stopped for a time pending the submission of certain estimates. Little or nothing was done during the year, except on the earthwork of the canal, and in the manufacture of bricks, and construction of lock-gates and bridges in the workshops.

The earthwork in the drainage works connected with this canal was carried on: little progress was made with the distributaries. Only Rs. 2,914 was spent on them.

The work done in this canal during the year was mainly in earthwork. Some small amount of work was done

High Level Canal, range I.

on 10th distributary from this canal. The Pingua embankment on the right bank of the canal was practically completed. Rupees 2,10,517 still remains to be expended on the completion of this canal with its drainage works and distributaries.

The expenditure on the Kendrapará Canal and its extensions was Rs. 15,399 during the year. Of this sum Rs. 3,144

Kendrapará Canal.

was spent on the canal itself, Rs. 5,854 on distributaries, and Rs. 6,401 on drainage and protective works. Portions of this canal, which are opened for traffic, have to be widened and deepened. This work can only be carried out during the closure of the canals: about half of it has now been completed. There is a balance of Rs. 6,36,829 still to be expended in completing the system of distributaries and drainage works in connection with this canal. Very little progress was made with these during the year. The great storm-wave, which devastated a portion of the coast between the Brahmini and Mahanuddy rivers, rose, or is said to have risen, ten feet above the lock coping of the tail lock of the Kendrapará Canal. The slopes of the canal bank were not much cut about, and showed no signs of the passage of the storm-wave, although the banks were strewn with dead cattle, and the adjacent lands covered with salt water.

On the Gobree Canal extension the expenditure of the year was Rs. 25,214.

Gobree Canal.

Surveys were in progress for the distributaries which have to be constructed. The works on the extension of this canal were all completed during the year, with the exception

of a small amount of work on the Chandbally road. A sea going steamer, *Curlew*, commenced running during the year from Calcutta direct to the terminal lock of the Gobree Canal.

The canal itself is practically completed. A sum of Rs. 5,71,740 remains to be expended, but this is chiefly required for distributaries and drainage and protective works.

Patamoondce Canal.

A flood embankment is in course of construction as a protective work. This work has been a good deal delayed by an accident which occurred in August 1885 at Patamoondce. The escape at that place suddenly collapsed and was entirely destroyed. The rush of water down the Patamoondce Canal scoured out the bed six feet deep and endangered the flood embankment. While endeavours were being made to strengthen it, the river rose to its highest and breached the bank, carrying away about one and a half miles of the canal. The escape which was destroyed will be rebuilt, but most probably at another site.

The expenditure to end of 1885-86 for works on the Mahanuddy series of canals was Rs. 1,23,63,269. There remains a balance of Rs. 52,09,806 to complete the project.

BRAHMINI-BYTURNI SERIES.

The works in this series consist of ranges II and III of the High Level Canal, and of the head-works of those canals on the two rivers which supply them. The head-works and the main canals themselves have long been practically completed. But a branch of range II of the canal, called the Jajepur Canal, which was sanctioned in 1883, is under construction. The earthwork of this canal was rapidly carried on during the year: the Mallandpur lock was practically finished. The subdivisional office and residence at Jajepur was finished with trifling exceptions.

Jajepur Canal.

A sum of nearly six lakhs of rupees has been provided for expenditure on distributaries from range II of the High Level Canal. Of this only Rs. 870 was expended during the year, chiefly on surveys. Under drainage and protective works also there was little progress. A sum of nearly seven lakhs has been provided, of which only Rs. 101 has as yet been spent.

High Level Canal, range II.

Similarly on the third range of this canal, the expenditure was small; only Rs. 21,158 was spent, of which only Rs. 9,615 was expended on distributaries and Rs. 10,715 on drainage works, the amounts provided in the revised estimates sanctioned by the Secretary of State being Rs. 4,81,914 and Rs. 6,41,650 respectively.

High Level Canal, range III.

The statement given in the first page of this report will show that of the amount of Rs. 3,13,96,220 sanctioned for direct outlay (including "loss by exchange") on the Orissa irrigation project as capital expenditure, the outlay to end of the year 1885-86 amounted to Rs. 2,20,73,027, leaving an unspent balance of Rs. 93,23,193 at the end of that year.

The total rainfall at the station of Cuttack during the year 1885-86, according to the tables published by the Meteorological Observer, was 49.63 inches as compared

Rainfall.

with 61.03 inches in the previous year and an average of 57.48 inches for a period of years. The fall during the two cultivating seasons—*kharif* and *rabi*—i.e., during the four months from July to October and the three months from November to January, was 29.47 and 3.42 inches respectively, against an average of 39.03 and 1.89 inches in the corresponding periods of the previous years.

Considerable damage was done in Orissa by floods in June and August 1885.

Breaches occurred in various places in the embankment on the Khoakye, Daib, Bargovi, and other branches of the Mahanuddy in the Purī district, but the worst breach

Floods.

was that in the Patamoondce Canal, described above, which resulted in damage also to the Gobree Extension Canal and outfall lock at Albha. This breach, however, was repaired, and the canal opened for traffic again on 10th October,

The cyclone which swept over the Orissa coast in September last year was a much more serious calamity. In various places beyond the reach of the actual storm-wave, bungalows were unroofed, thatched houses unroofed or blown down, trees levelled to the ground, and several boats, barges, and a dredger sunk. The only portion of the Orissa canals which lies within the area actually reached by the storm-wave was the "Kendrapará extension" to Jumboo, where the banks were slightly damaged. All buildings at and near this place were demolished, except the brick-built houses used as telegraph office and inspection bungalow, and some out-houses. The total loss, however, due to the cyclone has not been so heavy as might have been expected so far as this department is concerned. It is approximately estimated at Rs. 61,000.

At Dowdeswell Island, where the False Point Harbour staff reside, a small refuge-house had been constructed some years ago, which was the means, in this cyclone, of saving the lives of the only residents who escaped. All other buildings were completely washed away with their occupants.

A project for a sea-dyke along the coast between the Mahanuddy and Brahmini rivers, similar to that which now exists along the Hidgellee coast, has been initiated. The tract of country between these rivers has on several previous occasions been devastated by storm-waves, with the result of great loss of life.

The expenditure from provincial funds on account of working expenses and maintenance, charged to the revenue account of the Orissa project, amounted to Rs. 3,42,577 against Rs. 3,15,737 of the previous year. The following are the details :—

				1885-86.	1884-85.
				Rs.	Rs.
Extensions and improvements
Repairs	2,12,452	1,89,780
Transport service	10,238	13,357
Compensation
E-tablishment	1,00,722	97,355
Tools and plant	19,159	15,167
Refunds of revenue	6	78
Total				3,42,577	3,15,737

The excess was mainly caused by expenditure on the main canals and on drainage works which were maintained in good order.

The following statement shows the total lengths of canals and distributaries in operation at the close of the year 1885-86, and the areas which were protected from flood, commanded, and provided with distributaries, as compared with those of the previous year :—

NAME OF CANAL.	1885-86.						1884-85.					
	LENGTH OF CANAL OPEN.		Length of distributaries and village channels.	Area protected from flood.	Area under command.	Area provided with distributaries.	LENGTH OF CANAL OPEN. 	70,204	1,581	170	71,955	54,181	2,994	197	57,372

The following statement gives the particulars of water-rates during 1885-86 compared with those of the four previous years :—

YEAR.	Amount out- standing at commencement of year.	Amount falling due during the year.	Total for recovery.	Cash realiza- tion.	Remitted or written off.	Balance at the end of the year
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1881-82 ...	43,586	1,99,009	2,42,595	1,24,290	4,163	1,14,142
1882-83 ...	1,14,142	1,97,018	3,11,160	1,80,325	9,188	1,21,647
1883-84 ...	1,21,647	50,889	1,72,536	1,11,856	8,477	52,203
1884-85 ...	52,203	82,185	1,34,388	51,245	5,274	77,869
1885-86 ...	77,869	1,05,019	1,82,888	1,06,842	11,162	64,884

Compared with the year 1884-85, the actual realizations of water-rates during the year under review shows an increase to the extent of Rs. 55,597.

The total traffic upon the canals for the past five years is noted below :—

YEAR.	Number of boats.	Tonnage. Tons.	Value of cargo. Rs.	Tollage. Rs.
1881-82 ...	13,516	136,646	27,31,866	54,391
1882-83 ...	13,392	142,439	43,78,776	69,806
1883-84 ...	15,538	146,715	47,59,595	58,531
1884-85 ...	18,702	156,813	45,77,295	54,428
1885-86 ...	20,662	169,709	46,33,133	64,407

The canals were closed for repairs for about five weeks from the 1st May 1885.

The total revenue and working expenses of the Orissa Canals for the past four years, as included in the financial accounts, are shown below :—

YEAR.	1882-83.	1883-84.	1884-85.	1885-86.

Net total (deficit) ...	21,530	55,249	1,72,152	1,35,227

II.—IRRIGATION AND NAVIGATION WORKS, ORISSA CIRCLE.

The expenditure on the tidal creeks amounted to Rs. 736 in 1885-86, against Rs. 11,785 of the previous year. The details are given below:—

				1885-86.	1884-85.
				Rs.	Rs.
Works	438	9,581
Establishment	98	2,204
Tools and plant	200
Total				736	11,785

III.—AGRICULTURAL WORKS, ORISSA CIRCLE.

The expenditure on the Orissa embankments, including those in Balasor, which was met from Imperial funds and charged to the head of account "Agricultural works for which neither capital nor revenue accounts are kept," amounted to Rs. 1,79,605, as detailed below:—

						1885-86.
						Rs.
Works	25,301
Maintenance	1,20,441
Establishment	33,520
Tools and plant	3,253
Suspense accounts	—2,910
Total						1,79,605

During the year under review the accounts of the Balasore Government embankments, which had previously been kept separately, were amalgamated with the accounts of the Orissa embankments. Both sets of embankments are under the same Act.

SOUTH-WESTERN CIRCLE.

The expenditure in this circle during the year 1885-86, compared with that of the year 1884-85, is shown in the following statement:—

				1885-86.	1884-85.
				Rs.	Rs.
<i>Famine Relief Protective Works.</i>					
Orissa Coast Canal (Imperial)	82,000	4,00,000
<i>Capital expenditure on Irrigation Works not charged against Revenue.</i>					
Midnapore Canal (Imperial)	10,062	24,072
<i>Productive Public Works—Revenue Account.</i>					
Midnapore Canal (Provincial)	2,09,860	2,23,174
Hidgellee Tidal Canal (ditto)	48,609	36,886
<i>Irrigation and Navigation Works for which Capital and Revenue Accounts are kept—Capital Account.</i>					
Damoodah Project (Imperial)	—1,200	3,268
Calcutta and Eastern Canals (Provincial)	—42,574	9,197
Orissa Coast Canal (ditto)	4,16,403	1,90,872
<i>Revenue Account.</i>					
Calcutta and Eastern Canals (Provincial)	1,86,747	2,78,192
Orissa Coast Canal	29,881	
<i>Works for which neither Capital nor Revenue Accounts are kept.</i>					
Nadiya Rivers (Provincial)	77,668	95,776
Eden Canal (ditto)	46,938	43,922
<i>Agricultural Works.</i>					
Government embankments in Burdwan estates (Imperial)	1,00,686	} 5,19,009
Other Government embankments (Imperial)	2,62,453	
Tuccavee embankments under contract	2,68,415*	36,168
Howrah drainage works (local loans)	88,515	1,25,885
Sluices, village channels, &c. (contributions)	327	1,692
Total				17,84,790	19,89,002

* Includes irrecoverable expenditure of Rs. 2,15,816 written back to the debit of Provincial funds.

In this circle of the Irrigation Branch the work is of a more varied nature than in the Sone and Orissa circles.

I.—PRODUCTIVE PUBLIC WORKS.

MIDNAPUR CANALS.

No work of importance chargeable to capital was in progress during the year. The canal has been practically completed for some years.

The following statement shows, under the different sub-heads of account, the capital outlay (direct charges) on the Midnapur Canal for and to end of 1885-86 compared with the sanctioned estimate:—

DIRECT CHARGES.	Amount of estimate sanctioned by Secretary of State.	EXPENDITURE.		Unspent balance of estimate.
		1885-86.	Total to end of 1885-86.	
	Rs.	Rs.	Rs.	Rs.
I.—Works	54,09,001	2,739	53,40,959	68,042
II.—Establishment	19,09,096	212	19,22,329	—13,233
III.—Tools and plant	9,55,904	2,051	9,60,025	55,879
IV.—Suspense accounts	...	5,143	29,558	—29,558
Loss by exchange	67,768	94,800	—27,032
Total	83,41,769	10,175	82,87,671	51,098
Less receipts on capital account	25,001	113	39,566	—5,565
Net total	83,16,768	10,062	82,57,105	59,663

The main heads of expenditure chargeable to repairs are compared with those of last year in the following statement:—

	1885-86.	1884-85.
	Rs.	Rs.
Extensions and improvements	83
Repairs	1,15,931	1,33,040
Transport service	8,813	996
Compensation
Establishments	59,051	62,435
Tools and plant	25,952	26,591
Refunds of revenue	112
Total	2,09,860	2,23,174

The two tidal reaches (between the Hugli and Damoodah and the Damoodah and Roopnarain) were closed for silt clearance and to admit of the locks being overhauled. These reaches had not been closed for eight years, and the locks had not been repaired for that length of time, and were consequently in urgent need of repair. Whilst these reaches were closed, the daily steamer traffic was carried on by the Hugli and Roopnarain rivers without much difficulty and without accident.

The following statement shows the areas irrigated by the Midnapur Canal as compared with those of the previous year:—

	1885-86.	1884-85.
	Kharif.	Kharif.
Under Midnapur weir	60,580	60,352
Do. Panchcoorah weir	9,013	8,377
Do. Tidal reaches	1,011	565
Total	70,604	69,294

The following comparative statement shows the balances, assessments, and recoveries of water-rates on the Midnapore Canal since the year 1881-82:—

YEAR.	Amount out- standing at commencement of year.	Amount falling due during the year.	Total for recovery.	Cash realiza- tion.	Remitted or written off.	Balance at the end of the year.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	92,974	1,57,419	2,50,393	1,18,588	104	1,31,701
1882-83	1,31,701	1,54,648	2,86,347	1,04,060	39,811	1,42,476
1883-84	1,42,476	1,47,992	2,90,468	1,31,000	14,777	1,44,691
1884-85	1,44,691	1,23,321	2,67,012	1,16,807	38,993	1,11,212
1885-86	1,11,212	1,10,868	2,22,080	1,08,709	43,399	69,972

The following figures, which give the navigation receipts of the canal for the past five years, show that there has been a steady development of traffic:—

YEAR.	Number and tonnage of boats.		Value of cargo.	Tollage.
	No.	Tons.	Rs.	Rs.
1881-82	51,408	332,325	1,47,79,798	97,841
1882-83	52,515	360,973	1,69,43,043	1,06,042
1883-84	51,642	3,29,79	1,79,53,806	1,09,032
1884-85	47,601	412,372	1,57,51,977	1,21,457
1885-86	44,261	385,250	1,27,54,989	1,23,409

The receipts would have been still higher for the present year had not the tidal reaches been closed, as above noticed, from the 15th of February. It is noticeable that whilst the receipts have increased, the number of boats using the canal and their maundage have not increased. The explanation is that the boats which now use the canal use it for longer distances than formerly: there is in fact more through traffic.

The total revenue and working expenses of the Midnapur canals for the past five years, as included in the financial accounts, are shown in the following comparative statement:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	Rs.	Rs.	Rs.	Rs.	Rs.
Water-rates	1,18,588	1,04,060	1,31,000	1,16,807	1,08,709
Navigation	1,20,706	1,46,922	1,20,580	1,23,747	1,37,578
Miscellaneous	10,780	17,028	12,996	12,401	16,197
Total	2,50,074	2,68,010	2,64,576	2,52,955	2,62,484
Working expenses (direct charges)	2,28,474	2,38,077	2,15,646	2,23,174	2,09,860
Net total (profit)	21,600	29,933	48,930	34,781	52,624

HIDGELLEE TIDAL CANAL.

No work of importance chargeable to capital and no repairs deserving notice have been carried out during the present year on the Hidgellee Tidal Canal. Both ranges have suffered severely from the deposition of silt, especially range I; and no alteration in this respect can be hoped for until the canal is remodelled. The Hidgellee Tidal Canal is the connecting link between the river Hooghly and the Orissa Coast Canal. The development of traffic on the latter canal depends greatly on the efficiency of the Tidal Canal. A project for remodelling the Tidal Canal at a cost of Rs. 10,39,571 has been submitted to the Government of India.

The traffic on the Hidgellee Tidal Canal for the past five years is given below :—

				Number and tonnage of boats.		Value of cargo.	Tollage.
				No.	Tons.	Rs.	Rs.
1881-82	20,057	133,020	21,19,855	45,336
1882-83	17,445	132,884	23,83,244	43,184
1883-84	22,728	196,764	36,42,029	62,626
1884-85	17,660	145,417	30,06,852	41,298
1885-86	19,316	163,535	32,74,961	52,176

The increase is due to the opening of Range III of the Orissa Coast Canal, and the increase will doubtless be more marked when the whole of that canal is opened.

The following statement shows the receipts and working expenses of this canal :—

				RECEIPTS.			Working expenses.	Profit.
				Navigation.	Miscellaneous.	Total.		
				Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	45,848	1,146	47,294	28,678	18,616
1882-83	43,694	1,338	45,032	49,570	4,162
1883-84	62,317	1,273	63,590	46,581	17,009
1884-85	41,382	2,125	43,507	36,886	6,621
1885-86	52,113	312	52,455	48,609	3,846

II.—IRRIGATION AND NAVIGATION WORKS.

Orissa Coast Canal.

A capital and revenue account is kept of this work. The expenditure on it amounted during the year to Rs. 4,98,403, of which Rs. 82,000 was from Imperial funds and Rs. 4,16,403 from Provincial funds. The former sum was a grant in-aid from the protective grant. Though this canal was pushed on vigorously, and it was hoped that the whole canal might have been fully opened for traffic in July 1886, this expectation was unfortunately not realized. This was due to exceptional and unforeseen causes, which very seriously delayed the progress of the work. The chief cause was the cyclone-wave of September 1885, which not only did considerable damage to certain portions of the canal, but which, by destroying cattle and vegetation over a large tract, gave rise in some places to an epidemic of cholera, and in others to fever of an unusually severe type, which together brought the work almost to a standstill. In addition to this upwards of six inches of rain fell during fourteen days in March, filling the excavations and delaying the work. The state of each range is briefly described below.

Range III (36 miles).—The excavation is completed. Bhaintghur lock is finished. The Bhograï lock is completed, and will be opened before the rains set in. This reach was opened for traffic up to the Bhograï lock in July 1885, and the revenue realised up to the end of the year amounted to Rs. 13,718. The supply sluice at Bhograï has been commenced and the foundations put in. More progress could not be made owing to the difficulty experienced in procuring labour.

Range IVA (17 miles).—It was expected that this range would have been finished, but owing to the causes already alluded to this was found impossible, and the completion of some of the deep cuttings must remain over until next season. The range, however, will be open to traffic during the rains of 1886 with a minimum depth of 7 feet. The lock at Jamcoonda is practically completed, and the Panchpara lock is in a sufficiently forward state to admit of its being worked.

Range IVB. (6½ miles).—This is the range in which work is most backward. The earthwork is not fully completed, and the most that could be done was to cut a channel through the whole length, so as to admit of the range being used for traffic in the rains of 1886. The locks at Seebhatta

and Nulcool have made fair progress, but are still far from complete. Arrangements have, however, been made to pass boats by means of temporary locks, so that through traffic between Balasore and Calcutta may commence.

Range V (38 miles).—Had it not been for the cyclone, this range would have been completed. The amount of silt deposited by the storm-wave has been found to be much greater than was anticipated. A large portion of it has been removed, but some will still remain when the floods set in. The lock at Chargachia is nearly completed, and will be shortly in working order. The other masonry works on this range are practically completed.

The net result is that, though the progress has not been quite what was hoped for, the whole canal will, it is expected, be temporarily open for traffic in the rains of 1886, but that the traffic in range IVB will be carried on under disadvantages; further, that ranges IVA, IVB, and V will have to be again closed during the next working season to be completed, after which they will be permanently opened for traffic.

The capital outlay (direct charges) on the Orissa Coast Canal for and to end of 1885-86, compared with the sanctioned estimate, is shown in the following statement. A revised estimate aggregating Rs. 41,16,200 for direct charges has been submitted to the Government of India for sanction :—

	Amount of estimate.	EXPENDITURE.	
		1885-86.	Total to end of 1885-86.
<i>Direct charges.</i>	Rs.	Rs.	Rs.
I.—Works	26,71,110	4,00,103	26,67,043
II.—Establishment	6,67,778	92,024	5,86,222
III.—Tools and plant	1,06,854	15,328	1,23,127
IV.—Suspense accounts	—8,265	57,739
Total	34,45,742	4,99,190	34,39,131
<i>Less</i> receipts on capital account	787	2,185
Net total	34,45,742	4,98,403	34,36,946

To meet the above outlay the Government of India sanctioned as grants-in-aid Rs. 7,82,000 from the Imperial funds under "Famine relief—Protective works" during the years 1883-84, 1884-85, and 1885-86.

The following statement shows the receipts and working expenses of the Orissa Coast Canal: the revenue account was opened during the year under review :—

YEAR	RECEIPTS.			Working expenses.	Profit.
	Navigation.	Miscellaneous.	Total.		
	Rs.	Rs.	Rs.	Rs.	Rs.
1884-85
1885-86	13,663	55	13,718	29,881	—16,163

CALCUTTA AND EASTERN CANALS.

The capital account of these canals stood as follows at the end of the year :—

	Outlay during 1885-86.	Outlay to end of 1885-86.
	Rs.	Rs.
Direct charges—		
Old outlay	24,91,012
I.—Works	239	19,82,998
II.—Establishment	54	3,69,889
III.—Tools and plant	—1,106	3,43,913
IV.—Profit and loss	847
V.—Suspense accounts	—208	11,961
Total	—1,021	52,00,620
VI.— <i>Less</i> receipts on capital account	41,553	41,553
Net total	—42,574	51,59,067

On account of the restriction in funds, the expenditure on the improvement and maintenance of the Calcutta and Eastern Canals was reduced to the lowest point practicable. The plate girder bridges over Tolly's Nullah at Gurreah and Tollyganj were proceeded with, the former being completed and opened for traffic in July 1885, and the latter being almost finished when the year closed.

An estimate was sanctioned for dredging shoals in the Bhyrub river on the steamer route to Barisal, but after an expenditure of Rs. 3,972 the work was stopped for want of funds. No advantage resulted from the outlay, and it is probable that had the work been proceeded with, the improvement would have been of very temporary duration, as the meeting of the tides causes any shoals removed to be rapidly re-formed.

The canal banks, towpaths, bridge platforms, and roads were maintained in fair order.

The following statement shows the receipts and working expenses of these canals:—

YEAR.	RECEIPTS.			Revenue charges.	Profits.
	Navigation.	Miscellaneous.	Total.		
	Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	4,72,687	9,780	4,82,467	3,27,254	1,55,213
1882-83	5,55,130	9,064	5,64,194	3,20,265	2,43,929
1883-84	5,51,713	12,388	5,64,101	2,20,624	3,43,477
1884-85	5,20,195	49,231	5,69,426	2,78,192	2,91,534
1885-86	5,01,441	—21,657	4,79,484	1,86,747	2,92,737

The figures show that these canals, of which the capital expenditure now stands at Rs. 51,59,067, are thoroughly remunerative. The net receipts—that is, the balance after paying all maintenance and revenue charges—aggregate Rs. 1,16,19,314 since the canals were first taken over by Government at the beginning of the present century.

The above statement shows that the gross revenue of the canals has decreased. In 1884-85, however, a sum of Rs. 35,185 was wrongly credited to revenue, and had to be written back in the present year: for any useful comparison the revenue of the two years should therefore be taken as follows:—1884-85, Rs. 5,34,541; and in 1885-86, Rs. 5,14,669.

There was a large increase of traffic when the Chitpur lock was opened in 1882-83, and this improvement was maintained in the succeeding year, but in the last two years there has been a steady decline. This is mainly due to depression in trade, and to the opposition between the various steamer companies, who have carried cargo at nominal rates and so affected the boat traffic. This competition has now ceased.

The traffic on the Calcutta canals during the past two years is shown in the following comparative statement:—

	Number of boats.		Tonnage of boats.		Value of cargo.		Tollage.	
	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.
	No.	No.	Tons.	Tons.	Rs.	Rs.	Rs.	Rs.
Circular Canal ...	83,539	74,101	1,815,951	1,819,746	4,93,12,884	4,75,39,002	3,90,951	3,78,866
Tolly's Nullah ...	78,808	71,865	669,371	654,653	1,47,47,445	1,25,64,300	1,17,595	1,08,687
Total Calcutta Canals ...	162,347	145,966	2,485,322	2,474,399	6,40,60,329	6,01,03,302	5,08,546	4,87,553

The figures given for tollage in this statement do not include the receipts from ferries and demurrage, which are included in the head "Navigation" in the above statement.

NADIYA RIVERS.

No capital and revenue account is kept of these channels. No original work of any importance was in progress on the Nadiya rivers in the year

under review. The operations consisted of the usual temporary training works for keeping the rivers open during the dry season. A breach which occurred in the embankments at Laltikuri caused an unusually large volume of water to pass through the upper reaches of the Bhágíráthí and well scoured them out, whilst the Ganges fell slowly at the end of the flood season—a circumstance also very favourable to the successful and economic working of the river. The result was that the Bhágíráthí was maintained in excellent order throughout the season, with a good broad channel and a least depth of three feet.

No attempt was made to work the Mátabhángá and Jellinghee beyond constructing such training works as would secure to the people inhabiting the banks of those rivers an ample supply of fresh drinking water, for with the Bhágíráthí well open there is really no demand for anything further.

The results were satisfactory, and the rivers were economically and judiciously worked.

The tolls of these rivers show a tendency to decline, as will be seen from the following statement:—

YEAR.		RECEIPTS.			Expenditure.	Profits.
		Navigation.	Miscellaneous.	Total.		
		Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	...	2,10,041	1,179	2,11,220	2,70,720	—59,500
1882-83	...	1,82,351	616	1,82,967	1,18,231	64,736
1883-84	...	2,00,908	1,926	2,02,834	1,22,378	80,456
1884-85	...	1,91,981	476	1,92,457	97,335	98,122
1885-86	...	1,83,382	399	1,83,781	77,668	1,06,113

This is probably not so much due to the depression of trade or to the opening of railways as to the improvements in the Calcutta canals, which naturally divert traffic from these rivers. It is satisfactory to notice that the profit on the Nadiyá rivers has steadily increased.

The traffic on the Nadiyá rivers during the last two years is shown in the following statement:—

	Number of boats.		Tonnage of boats.		Value of cargo.		Tollage.	
	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.
	No.	No.	Tons.	Tons.	Rs.	Rs.	Rs.	Rs.
Nadiyá rivers	65,541	60,815	899,605	862,477	3,41,51,533	3,38,41,805	1,91,981	1,83,391

EDEN CANAL.

The principal works connected with the Eden Canal scheme were completed two years ago. The following less important, though useful and necessary, works were in progress. The new supplementary channel for the admission of the cold weather supply was completed; a new regulator at Mymaree was constructed, and the stop dam at Joojooty was commenced. The canal fulfilled its purpose of supplying good wholesome drinking water to those living on the banks of the Kana Nuddee, Kana Damoodur, and Sursuthi rivers, and to the Bardwan Water-works.

During the rainy season 31,440 acres of paddy land, and during the dry season 25,000 acres of *boro* rice were irrigated. A larger area would have been irrigated, but irrigation was stopped by order of Government. A sand dam had to be thrown across the Damoodur at Joojooty in the dry season to obtain a sufficient supply of water; silt had to be cleared from channel No. 1 and from the Banka Nullah, and weeds from the Sursuthi and Kana Nuddee.

III.—AGRICULTURAL WORKS.

The works requiring notice are the following :—

- (1) Surpai drainage works.
- (2) Bullee Bheel works.
- (3) Howrah drainage works.
- (4) Remodelling Murshedábád embankments.
- (5) Dancoonee drainage works.

The Surpai sluice was completed last year, the excavation of the river of that name has now been finished, and the permanent outer dam nearly so. Before the floods of 1886 everything will be in order for the drainage operations.

The Bullee Bheel works were completed before the rains of 1885, and a very large proportion of the bheel was covered with an unusually rich rice crop, when the tremendous flood from the Nadiyá rivers raised the Ichamuttee until it topped its banks and destroyed the crops. The flood was an almost unprecedented one, and such as seldom occurs more than once or twice in a century.

The Howrah drainage works have been completed, with the exception of the Huglí right embankment and the Bally khal right embankment: the latter, however, has been stopped by the orders of Government, and it is doubtful whether it will be necessary to carry it out at all. It is satisfactory to have to record that notwithstanding the rainfall of 1885 was exceptionally heavy, and the embankments were not completed, the outfall sluice was able to pass off the flood and rain water, and full crops were raised.

It was noticed last year that the work of remodelling the Murshedábád embankments was completed, but that the land acquisition proceedings were not finished. When the year under review closed, the land acquisition was still in progress: it will, however, come to an end in 1886-87.

Owing to the heavy rainfall and to the high level of the Huglí and Bally khal the drainage of the Dancoonee Jullas through the Biddabatty sluice was greatly interfered with, and in many cases the crops were destroyed for want of drainage. The sluice was in good order, the gates having been recently repaired.

The year under review was one in which unusual inundations occurred. The main Ganges and its western flood outlets—the Bhágíráthí, Jalangí-Byrub, and Mátábhángá—were in heavy flood, and on the 23rd of August the Murshedábád embankment on the left bank of the Bhágíráthí gave way at Laltikuri. The breach eventually became nearly half a mile in width, and for three weeks 50,000 cubic feet of water per second poured across country, destroying huts and crops in its progress, and eventually breached the Eastern Bengal and Bengal Central Railways. The mischief was aggravated by heavy rains over the inundated tracts, the rainfall having averaged sixteen inches in the three weeks from August the 22nd to September the 12th.

In all about 2,800 square miles of country were inundated. The flood was attended with but little loss of life, but villages and crops were destroyed. A short embankment has been thrown up to temporarily protect the country; but until the embankment is retired, once for all, from the treacherous soil at Laltikuri to good ground, where it can be held against any flood, breaches will occur, whenever there is a high rise in the Bhágíráthí, as has hitherto invariably happened. The length of such an embankment would be about seven miles, and its cost Rs. 1,80,000.

Very severe floods, due to excessive local rainfall, took place in the Damoodur, Roopnarain, Darkessur, Selye, and Cossye rivers. Embankments gave way in all directions and over 200 breaches occurred, and more would have happened but for the strenuous exertions made by the local officers: as it was, the crops were destroyed over some 720 square miles in Midnapur, and in all 1,430 square miles were inundated in that district. In the district of Huglí 285 square miles were inundated. The estimated cost of repairing the

damages done to the Government embankments by the floods is Rs. 88,645, of which Rs. 35,406 was spent during the year under notice and Rs. 31,719 for the Tuccavee embankments, of which Rs. 12,116 was expended. The flood in the Cossye carried away the top two feet of the training groyne at the Midnapur Canal head-works for almost its entire length, and did some slight damage to the anicut and under-sluices. The same flood carried away and sank the swing ferry pontoons at Panekurah.

The rainfall at Midnapur and Panekurah was 76·20 and 86·03 inches, against an average for 17 years of 56·29 and 56·61 respectively. The rainfall at Ghattal was 94·44, the average (for ten years) being 62·10.

A cyclonic storm visited the district of Balasor on the 22nd of September 1885, the centre of the cyclone passing through False Point, where the unprecedentedly low barometric reading of 27·1 was noted. At Balasor the lowest reading was 29·3. The cyclone was accompanied by heavy rain and a huge storm-wave. From the southern limits of the district to the Burrabolong river the storm-wave was stopped by the Orissa Coast Canal embankment, except where the canal crosses certain creeks, up which the flood rushed with increased force and breached the canal banks and inundated a limited area of country beyond. The country between the canal and the sea was flooded to a depth of from 8 to 10 feet. Above the Burrabolong river the coast is protected by a continuous range of sand hills. The inundated area in the Balasor district amounted to about 150 square miles, and such crops as existed on this were destroyed and large numbers of cattle were drowned, but there was little or no loss of human life: this latter fact was due to the circumstance that nearly all the villages are protected by the canal bank, and that the few that are not so are on high ground. If the wave had not been stopped by the canal bank, the loss of life would have been great, and crops would have been destroyed over a much larger and richer area, the inundated country being chiefly grazing grounds; whereas that to the west of the canal is entirely under rice cultivation. The wave damaged the canal by breaching the embankments and washing silt into the bed. The cost of repairing the damage done to the canal is estimated at Rs. 43,892, of which Rs. 20,088 were spent in the year under review.

SONE CIRCLE.

The following statement shows the expenditure in the Sone Circle during the year 1885-86 compared with that of the year previous:—

	1885-86.	1884-85.
<i>Productive Public Works—Capital Account.</i>	Rs.	Rs.
Sone Canals (Imperial)	1,60,701	(a) 3,92,217
<i>Productive Public Works—Revenue Account.</i>		
Sone Canals (Provincial)	5,62,370	6,03,961
<i>Irrigation and Navigation Works—Capital Account.</i>		
Sarun Canals (Provincial)	3,621	1,590
<i>Revenue Account.</i>		
Sarun Canals (Provincial)	22,751	24,950
<i>Agricultural Works.</i>		
Teur Canal (Provincial)	2,044	2,635
Sarun tuccavee embankments under contract	18,080	32,059
Tirhut ditto ditto	14,416	52,987
Chumparan ditto ditto	10,503	36,039
Village channels, Sone Canals (contributions)	6,102	6,111
Embankments and drainage works (tuccavee)	10,680	(—)29,519
Total	8,01,268	11,23,030

(a) Includes Rs. 34,277—expenditure in England.

I.—PROTECTIVE PUBLIC WORKS.

SONE CANALS.

The following statement shows in detail the outlay charged to the capital account of the Sone Canals during the year 1885-86 compared with that of the year 1884-85:—

			1885-86.	1884-85.
			Rs.	Rs.
Head works	(—)30	3,771
Main canal and branches	46,812	1,08,623
Distributaries	48,845	1,57,894
Drainage and protective works	19,908	18,001
Sone irrigation survey	466	2,742
Total			1,16,001	2,91,031
Establishment	24,689	55,081
Tools and plant	25,526	76,980
Suspense accounts	(—)5,361	(—)27,855
Total			1,60,855	3,95,237
<i>Less</i> receipts on capital account			154	3,020
Net total			1,60,701	3,92,217

The total direct charges against capital account to end of 1885-86 amounted to Rs. 2,48,61,348 against Rs. 2,78,88,697, the amount of sanctioned estimate, the balance available for further expenditure being Rs. 30,27,349.

The Sone canals are divided into two series—the Western Main Canal Series and the Eastern Main Canal Series. These are respectively in the west and east sides of the river Sone. The head-works in the river itself are common to both Series.

HEAD-WORKS.

The head-works of the Sone Canals at Dehree may be regarded as complete, but the acquisition proceedings for the land on the bed of the river have, however, not yet been finished.

Some anxiety was caused by the destruction of nine piers of the Sone weir at Dehree on the night of the 31st July. There was only a very moderate flood in the river at the time, and there can be little doubt that the true cause of the failure was that the piers were not equal to the constant working to which the shutters are now subjected owing to the extension of irrigation. In the estimate sanctioned for the repairs necessary provision was made for increasing the thickness of the piers from 4 feet to 6 feet 7 inches, and reducing the number of vents at Baroon (where 7 out of 9 piers that gave way were situated) from 22 to 20.

WESTERN MAIN CANAL SERIES.

This series consists of the Main Western Canal, the Arrah Canal, the Baxár Canal, and their branches and distributaries. The Main Western and Arrah Canals have previously been reported complete, and only minor works in connection with the distributaries taking off from them were in progress during the year. An additional syphon culvert under the Beheea Branch Canal at the 13th mile was sanctioned and completed. There has been considerable controversy with regard to the works necessary to complete the drainage of the country in the neighbourhood of Perroo. It is expected that this culvert and an extension of the Bachore drainage cut, which was sanctioned but not commenced during the year, will provide all that is required. The Kusere escape channel was completed during the year, as also a drainage culvert under the Panmarree escape.

A building to accommodate the office of the Executive Engineer was sanctioned and nearly completed during the year.

The only works of importance in progress during the year have been drainage works. An escape channel from the Khoormabad distributary was completed, and some progress made with those from the Bulturee, Khurghur, Panjraon, Santh, Garriah, and Amarapur distributaries, and well as that from the Gurra Chodbey Canal, which works have lately been sanctioned. A drainage channel from the Baxár Railway station was completed during the year, and in the rains was found to be very effective.

EASTERN MAIN CANAL SERIES.

This series of canals includes the Eastern Main Canal and the Patna Canal with their distributaries. The canals have been finished for some years. The Muncer, Nugwan, Rewah and Majhoulie distributaries were completed during the year. A tehsil cutcherry for the circle officer was built at Daudnagar. A tehsil cutcherry at Bikrum and an office for the Assistant Engineer at Daudnagar were about half finished at the close of the year.

The table below shows the progress made in the Sone Canal system and the number of miles of existing channel at the close of the year :—

DIVISION.	MILES OF NAVIGABLE CANAL.			MILES OF BRANCH CANAL.			MILES OF DISTRIBUTARIES.		
	Completed at the commencement of the year.	Completed during the year.	Total.	Completed at the commencement of the year.	Completed during the year.	Total.	Completed at the commencement of the year.	Completed during the year.	Total.
Eastern Sone ..	86½	86½	345	7	352
Arrah ...	74½	74½	71½	71½	469	469
Buxar ...	58	58	77½	77½	321½	12	333½
Total ...	218½	218½	148½	148½	1,135½	19	1,154½

The rainfall was considerably in excess of that registered in 1884-85, the figures for the station of Arrah, which may be taken as a fair example, being 26·19 inches in 1884-85 and 47·84 inches in 1885-86.

A high flood occurred in the river Sone on the 25th and 26th of August 1885, and the spill-water reached the canal in the neighbourhood of Arrah on the morning of the latter day. The Arrah canal bank withstood the flood, but the Koelwar distributary was breached in several places. The low lands in the Shahabad district were very generally flooded, and the banks of both the Doonraon and Beheea canals, which were empty at the time, were cut to assist in draining off the flood waters, which threatened to submerge several villages. No serious injury resulted from this measure. It was found that the Gudhancee distributary interfered with the drainage of the country on its right bank, and two additional syphons have since been sanctioned to remedy this defect.

The expenditure on maintenance of the works of the Sone canals (direct charges) aggregated Rs. 5,52,370 in 1885-86 as compared with Rs. 6,03,961 in the previous year, thus :—

	1885-86.	1884-85.
	Rs.	Rs.
Repairs ...	2,82,766	3,35,914
Transport service ..	549	8,918
Compensation	6
Establishment ...	2,25,947	2,25,493
Tools and plant ...	32,451	26,175
Refunds ...	10,657	7,455
Total ...	5,52,370	6,03,961

The area irrigated during the year and that previous is shown in the state
Irrigation. ment below :—

YEAR.	Kharif.	Rabi.	Sugarcane.	Five years' leases.	Hot weather crops.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1884-85	130,579	66,630	9,224	149,185	959	356,577
1885-86	81,296	50,668	10,528	179,794	10,856	333,132

The small decrease in irrigation is fully accounted for by the largely increased rainfall.

The following statement shows the progress made in the collection of water-rates on the Sone canals :—

YEAR.	Amount outstanding at commencement of year.	Amount falling due during the year.	Total for recovery.	Cash realizations.	Remitted or written off.	Balance at end of the year.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	4,64,261	6,29,739	10,94,000	6,03,930	53,221	4,36,849
1882-83	4,36,849	4,62,301	8,99,150	5,66,465	21,020	3,11,665
1883-84	3,11,665	7,42,311	10,53,976	4,84,209	1,45,974	4,23,793
1884-85	4,23,793	11,15,399	15,39,192	7,70,359	73,625	6,95,208
1885-86	6,95,208	8,07,702	15,02,910	9,78,323	1,26,266	3,98,321

The following statement shows the traffic on the Sone canals during the past five years :—

YEAR.	Number of boats.	Tonnage.	Value of cargo.	Tollage.
		Tons.	Rs.	Rs.
1881-82	10,688	113,971	44,53,586	54,361
1882-83	7,781	78,713	37,84,908	39,063
1883-84	8,831	95,476	53,54,475	47,590
1884-85	6,434	61,730	41,10,604	37,397
1885-86	7,210	77,006	36,16,358	41,707

The revenue account of the past five years is shown below :—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	Rs.	Rs.	Rs.	Rs.	Rs.
Water-rates	6,03,930	5,66,465	4,84,209	7,70,359	9,78,323
Navigation	93,116	71,295	85,193	51,761	46,243
Miscellaneous	39,246	47,007	34,405	40,354	38,080
Total	7,36,292	6,84,677	6,03,807	8,62,474	10,62,646
Working expenses (direct charges)	4,57,322	5,29,841	5,14,477	6,03,961	5,52,370
Net revenue	2,78,970	1,54,836	89,330	2,58,513	5,10,276

II.—IRRIGATION AND NAVIGATION.

SARUN CANALS.

For these works a capital and revenue account is kept. The capital account of these works has been closed, final payments having been made during the year in some land acquisition cases, which had been referred to the civil courts. The state of the river at the head of the canals, which is always a source of anxiety, suffered no material change, and the temporary dams necessary to ensure a supply in the canal feeders were constructed as required. The feeders, regulators, and other works were maintained in an efficient condition.

The capital and revenue accounts for and to end of 1885-86 of the Sarun project are shown below:—

I.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT.	EXPENDITURE.	
	During 1885-86.	To end of 1885-86.
	Rs.	Rs.
Works	3,167	4,79,946
Establishment	454	1,64,170
Tools and plant	25,612
Total	3,621	6,69,728
Less receipts on capital account	498
Net total	3,621	6,69,230

II.—REVENUE ACCOUNT.

HEADS OF ACCOUNT.			RECEIPTS.			HEADS OF ACCOUNT.			CHARGES.

MUDHUBANEE CANAL

This work was formerly known as the Teur Canal. Capital and revenue accounts are not kept for it. The proprietary right in this canal was acquired towards the close of the year by Government, the zemindar of Mudhubance accepting the actual amount expended by him (Rs. 66,020) on the work in satisfaction of all demands, with the proviso that the canal should be called the Rajcoomar Bishun Prokash Singh of Mudhubance Canal, and that he should be allowed to irrigate 250 local beegahs free of charge. An extraordinary flood occurred in the Teur river on the 6th July, when the gauge at Ekdaree read 244.55, or 1.55 higher than the highest flood on record. This extraordinary rise, which occurred in a few hours, is believed to be due to embankments in Nepaulese territory across the Tellahai and Jummo rivers having given way. Some 70 feet of the breast wall of the weir was carried away. The liability of the Teur river to these sudden freshes renders it a matter of considerable difficulty to determine on the best course to adopt to provide for future contingencies of the kind.

III.—AGRICULTURAL WORKS.

The embankments on the Gundak river in the districts of Sarun, Champaran, and Muzaffarpur are maintained by Government under the contract system. The embankments have been raised to a height of three feet above the highest known flood, and otherwise kept in efficient repair. The Monghyr and Bazidpur embankments on the left bank of the river Ganges and the Turki embankment on the right bank of the river Bagmati have been kept in good order at the expense of the landholders benefited. The total expenditure in these embankments during the year under review amounted to Rs. 42,999: the entire sum was spent on repairs and maintenance.

Provincial Railways.

GENERAL REVIEW.

As the result of the severe financial pressure which prevailed throughout the empire during the year under review, and which in an exceptional degree affected the progress of Bengal Public Works generally, the action which in the matter of railway extension was forced upon the Lieutenant-Governor was rather the concentration of expenditure upon nearly completed sections than the extension of work over new projects. Including Imperial and all other lines within the boundaries of the Province, the net result of the year's operations was an increase in open mileage of about 78 miles, the details of which are given in the following table:—

RAILWAY.	PAGE	MILES OPEN END OF		CAUSE OF DIFFERENCE.	DATE.	
		1884-85	1885-86.			
East Indian	...	4	729	734½	Digha Ghât branch, 5½ miles opened	2nd May 1885
Patná-Gayá	...	5	57	57		
Tárakeswar	...	5	22	22		
Eastern Bengal	...	6	231	231		
Bengal Central	...	7	125½	125½	{ 20 miles, Dacca to Joidebpur	12th Dec. 1885
Dacca	...	8	10½	85½	{ 32 miles, Joidebpur to Gaffargaon	18th Feb. 1886
Northern Bengal	...	9	219	249	{ 23½ miles, Gaffergaon to Maimansingh	29th Aug. 1885
Káuniyá-Dharlâ	...	10	39½	40½	½ mile, minor correction.	
Tírhút	...	12	227	226	1 mile, minor corrections.	
Bengal and N.-W.	...	13	92½	92½		
Dárjiling-Himalayan	...	14	51	50½	½ mile, correction of mileage.	
Deogarh	...	14	5½	4	Rohini branch closed	1st Nov. 1885.
Nalháti	...	16	27½	27½		
Total open mileage	...		1,869½	1,948	Or a net increase of about 78 miles.	

The steady progress of the provincial State Railways is satisfactorily illustrated by the figures of gross receipts during the five years ending with that under review, which were 32½, 37½, 41½, 43, and 45 lakhs. Working expenses, however, for reasons which will be explained, increased in a more rapid ratio, having been 19, 21, 25½, 31½, and 31 lakhs during the same period. Net receipts therefore only succeeded in maintaining a steady average position: they were 13½, 16½, 15½, 11½, and 14 lakhs in the five-year period. The reasons which tended to the enhancement of working expenses in a more rapid proportion than gross receipts were, generally, the opening of new extensions, which require some time for the proper development of their traffic, and the necessity for heavy renewals of creosoted pine sleepers upon the Northern Bengal and Tirhut State Railways. These sleepers were laid in the road during its first construction about ten years ago, and it was found necessary in 1884-85 somewhat unexpectedly to commence a wholesale renewal of them. This work of renewal will continue on the Northern Bengal State Railway till the end of 1887-88, at the rate of about 6,000 sleepers per mensem, after which it will be reduced to about 4,000, thus effecting in future years a saving of about half a lakh per annum in this one item of working expenses. Upon the Tirhut State Railway it is expected that the whole of the creosoted pine sleepers will have been renewed by the end of 1886-87. The European creosoted pine sleepers were, in the earlier days of the Bengal Railways, procurable at a cheaper rate than sleepers of indigenous wood; but owing to the opening up of the forests, and the improvements which have taken place in means of communication, this is now no longer the case, and sleepers of indigenous wood are being extensively used.

In place of the cause of exceptional expenditure which has just been referred to, however, another necessity has arisen for additional outlay, the renewal, namely, of rails upon the Northern Bengal State Railway. When this line was originally built, engines were light, and cheapness of prime cost was a matter of considerable importance in view of the little experience which had at that time been accumulated regarding the probable traffic upon metre gauge lines. The tendency of late years has been towards heavier engines and better filled trains, with the result that the renewal of the old iron rails with steel rails of a heavier section cannot much longer be deferred. It is satisfactory, however, to know that the heavier steel rail is at present to be procured at a cheaper mileage rate than the old iron rail. The net result of all receipts and outgoings on account of the Bengal open provincial railways is shown in the following statement for the five years. It will be observed that the small net profit of the first two years has been turned into a loss in the two last: the figures, so far as known, however, for the year 1886-87 point to a probable early return to a profit:—

HEAD OF ACCOUNT.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	Rs.	Rs.	Rs.	Rs.	Rs.
Working expenses ...	19,02,224	20,93,816	25,57,414	31,26,417	31,02,160
Interest on open line ...	12,21,247	12,37,632	15,37,240	14,84,843	16,07,982
Total expenses ...	31,23,471	33,31,448	40,94,654	46,11,260	47,10,142
Gross receipts ...	32,70,050	37,88,453	41,24,073	43,09,793	45,02,802
Net loss to Bengal	3,01,467	2,07,340
Net profit to Bengal ...	1,16,579	4,56,975	29,419

It will be convenient here to explain an important alteration which has been carried out during the year under review in the capital accounts of all the lines. Heretofore the expenditure which has been incurred on account of "loss by exchange" has been shown in the financial accounts separately from ordinary capital expenditure, and in any statement showing the cost of the railways this item has been excluded. Had the expenditure in question been trifling in amount, there could have been no practical objection to this method of treatment. As, however, upon the Bengal State Railways alone this item had run up to nearly 23 lakhs, it will be understood how liable to misconstruction was the system of accounting for this charge, which has hitherto prevailed. This has now been changed, and in the accounts for 1885-86, and succeeding years, the accumulated loss by exchange will be shown as a direct charge to Capital. Similarly, the loss by exchange on stores, &c., charged off to Revenue, instead of being simply noted in the accounts, will in 1885-86 and in future years be a regular item of working expenses.

An important change in the police arrangements of the Bengal Provincial and Imperial State Railways was carried out during the year. Heretofore the ordinary police work of the railways, in connection with the detection of crime, and the maintenance of law and order generally, was carried on by the local district police, who in addition were responsible for watch and ward over goods in transit and in charge of the railways. This arrangement proved unsatisfactory and has been altered, and now all railways appoint and pay their own watch and ward men, none of whom are regularly enlisted policemen, and the Police Department carry out all law and order work, the cost being debited to the ordinary police charge of the Province. So far as it is now possible to judge, the results of the change of system are satisfactory.

At the end of the year the terms of the provincialisation of the Eastern Bengal State Railway were under discussion: it was decided, however, that existing arrangements should remain undisturbed until the close of the current provincial contract.

Colonel S. T. Trevor, R.E., was Chief Engineer of Bengal and Secretary to Government in the Public Works Department, except during three months, when Mr. W. H. Parker, M.I.C.E., Superintending Engineer, officiated for him. Mr. F. J. E. Spring, M.I.C.E., was Under-Secretary throughout the year.

EAST INDIAN (IMPERIAL) RAILWAY.

5' 6" GAUGE.

WORKED BY A COMPANY.

The following facts have been extracted from the Administration Report of the East Indian Railway as being of general interest. A large number of minor works were carried out during the year, principally in connection with the improvement of station accommodation: the only work of special interest to the Province has been the Hughli Bridge, and regarding the prospects of the early opening of that work the Chief Engineer remarks as follows:—"If good progress is made with the erection of the cantilever, and if the appliances and preparation for launching the main girders can be completed in time, and the tides should be suitable, it is possible the launching of the main side spans may be effected in November, in which case the bridge should be ready for traffic by the end of 1886." The Alipur Coal Company's siding, called in previous reports the "Khairabad-Rupnarainpur Railway," has been completed and opened for traffic. The only extension of the East Indian Railway which was opened during the year under review was the branch line, $5\frac{1}{2}$ miles in length, from Bankipur to the Bengal and North-Western Railway ferry at Digha Ghât, which was opened for traffic on the 2nd May 1885. About 300,000 tons of coal were raised from the Company's collieries at Kurhurbali and Serampur in 1885 at a cost of Rs. 1-11-9 per ton. The lines worked by the Company on the 31st December 1885, representing 2,543 miles of single track, were as follows:—

East Indian Railway proper	...	1,514 miles.	5,238 feet.
Tarakeswar Railway	...	22 "	1,214 "
Patná-Gayá State Railway	...	57 "	1,056 "
Dildarnagar-Ghazipur Railway	...	11 "	5,239 "
Scindia State Railway	...	74 "	4,657 "
<hr/>			
Total length	...	1,681 "	1,564 "
Sidings	...	392 "	953 "

47,067 persons were employed by the Company during the year, of whom 1,620 were Europeans and Eurasians. The enrolled strength of the Volunteer corps was 1,130. On the 31st December 1885 the rolling-stock of the line consisted of 576 engines, 1,350 coaching vehicles, and 9,160 goods vehicles, of which 436, 1,269, and 8,725 respectively were in actual running. In the year 1885 gross earnings were Rs. 4,63,86,914, working expenses were Rs. 1,63,51,238, and consequently net earnings were Rs. 3,00,35,676. After payment of all preference charges, the Government's share of surplus profits was Rs. 65,18,010 and the Company's share Rs. 16,29,503. The share of the earnings derived from goods traffic was more than one-third of the whole.

The following table of exports from Bengal, Bombay, and Sindh is interesting as showing the growing importance of the trade of the port of Bombay and Sindh relatively to that of Calcutta:—

YEARS.	WHEAT.				COTTON.				SEEDS.			
	Total from India.	From Bengal.	From Bombay.	From Sind.	Total from India.	From Bengal.	From Bombay.	From Sind.	Total from India.	From Bengal.	From Bombay.	From Sind.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1882	759,962	222,656	418,511	118,007	331,313	35,351	233,934	7,798	671,304	203,629	284,743	33,525
1883	1,111,424	405,891	488,093	217,347	300,589	24,114	212,109	4,150	821,085	302,133	408,086	60,888
1884	700,451	130,004	376,833	193,194	289,623	25,418	227,815	2,007	881,635	324,317	412,407	81,521
1885	1,102,725	2,3,759	565,376	322,593	184,523	18,583	136,709	5,159	922,110	334,577	4,5,416	73,889
Total ...	3,674,562	972,310	1,848,810	851,351	1,105,048	103,466	860,567	19,318	3,290,134	1,252,647	1,565,652	260,823

The work done during the last six years has been as follows:—

Year	...	1880	1881	1882	1883	1884	1885
Passengers	...	8,081,828	8,375,642	9,854,929	10,727,717	11,111,114	11,246,588
Goods	...	3,471,109	3,326,964	4,383,652	4,938,019	4,313,065	4,638,421
Passenger receipts	...	1,03,54,044	1,06,22,905	1,16,66,598	1,12,01,732	1,16,90,147	1,14,21,497
Goods receipts	..	2,96,56,368	3,20,97,316	3,26,78,104	3,57,97,134	2,98,62,801	3,21,39,974
Mean passenger mileage	...	70.72	70.37	74.63	69.82	70.13	68.43
Mean goods mileage	...	230.06	251.90	228.82	231.95	211.58	223.54

The very marked impetus which was given to the development of passenger traffic by the reduction of third class fares in 1882 has been steadily maintained. The requirements of the local traffic in the neighbourhood of the large up-country cities continue to receive special attention.

PATNA-GAYA (PROVINCIAL) STATE RAILWAY.

5' 6" GAUGE.

This line continued to be worked by the East Indian Railway Company, with the result of a steady improvement in net receipts, as will be seen from the following table, which exhibits the result of the working since the commencement. The entire net profit to Bengal has been Rs. 3,79,799.

YEAR.	Gross receipts	Working expenses.	Net receipts.	Interest paid by Provincial to Imperial.	Profit or loss to Bengal.	REMARKS.
	Rs.	Rs.	Rs.	Rs.	Rs.	
1877-79	57,561	—57,561	Financial year.
1879-80 ...	3,39,643	1,87,061	1,52,582	1,23,828	28,754	Ditto.
1880-81 ...	4,98,282	2,75,627	2,22,655	1,39,884	83,771	Ditto.
1881-82 ...	5,36,364	3,41,173	1,95,191	1,36,087	59,104	Ditto.
1882 ...	3,98,343	2,70,998	1,27,345	1,41,684	—14,339	Nine months.
1883 ...	4,70,192	2,33,563	2,36,629	1,39,823	96,806	Calendar year.
1884 ...	5,17,926	2,98,250	2,19,676	1,41,453	78,223	Ditto.
1885 ...	5,17,500	2,71,790	2,45,710	1,46,669	99,041	Ditto.

The entire capital outlay which had been incurred upon the line up to the end of 1885-86 was Rs. 41,81,737, of which Rs. 83,807 were spent during the year. During the floods of 1885 a double 30-feet span girder bridge upon this line was carried away. The receipts from passenger traffic upon the Patna-Gaya State Railway are normally about double the receipts from goods. No great development of either class of traffic is indicated in the following table:—

		1880.	1881.	1882.	1883.	1884.	1885.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Passenger receipts	...	3,39,392	3,17,195	3,64,762	3,20,153	3,16,112	3,38,465
Goods receipts	...	1,38,952	1,60,133	1,75,531	1,44,813	1,66,251	1,74,351

TARAKESWAR (ASSISTED) RAILWAY.

5' 6" GAUGE.

This line continued to be worked by the East Indian Railway with the satisfactory result of a 7 per cent. dividend in the year 1885. The entire capital expenditure which up to the end of 1885 had been incurred upon the line was Rs. 16,88,993, and in addition to this the Government of Bengal had up to the end of 1885-86 expended Rs. 1,51,503 upon surveys and land for the Company. Some further small expenditure still remains to be incurred upon the latter account, but it is expected that all land will have been completely acquired by the end of 1886-87. The character of the traffic of this line can be judged from the fact that goods receipts were only about $\frac{1}{15}$ th part of the coaching receipts of the line during 1885, and that the receipts on account of third class passengers were about $\frac{9}{10}$ ths of the gross passenger receipts. The line continued to be maintained by the East Indian Railway Company in an efficient manner. The financial success of this undertaking illustrates in a remarkable manner the benefits which are likely to attend the judicious selection of gauge and routes for short branch lines of railway in the more populous and wealthy parts of Bengal, for had the gauge not been assimilated to that of the main East Indian Railway, working expenses must necessarily have largely exceeded the economical figure at which they are maintained under the current arrangement with the trunk line. The insufficiency of feeder roads has hitherto proved a great obstacle to the development of goods traffic, but this is a matter which it is hoped will gradually be rectified. Messrs. Hoare, Miller & Co. continued to be the Agents of the Company as heretofore.

EASTERN BENGAL (IMPERIAL) STATE RAILWAY.

5' 6" GAUGE.

This system, as explained in last year's report, includes the Calcutta and South-Eastern Railway and what was formerly called the Poradaha section of the Northern Bengal State Railway, the length of the whole being 233 $\frac{3}{4}$ miles. The Bengal Central Company's line, 125 $\frac{3}{4}$ miles long, is also worked by the agency of the Eastern Bengal State Railway. The length of the entire system therefore which is open for traffic is 359 $\frac{1}{2}$ miles. The line is at present under the Director-General of Railways, and the Bengal Government is only interested in it financially to the extent of Rs. 30,000 per annum, which is paid at present to the provincial account as compensation for loss of the earnings of the Calcutta and South-Eastern Railway, and 4 per cent. interest, amounting to Rs. 1,01,430 per annum, which is payable on account of the provincial capital which has been invested in the Diamond Harbour branch. In view of the probable early provincialization of the system some details will be of interest: they have been extracted from the accounts and administration report of the line.

The capital account of the line stood at Rs. 5,05,34,176 at the end of March 1886. Out of this sum Rs. 24,40,700 represented expenditure, including loss by exchange, in 1885-86. The net revenue realized during the year under review was Rs. 12,06,429. Interest and annuity charges amounted in the year to Rs. 29,78,418. The following is a statement of the gross earnings and working expenses of the Eastern Bengal, Calcutta and South-Eastern, and Bengal Central Railways since the beginning of 1881:—

HALF-YEAR.	EASTERN BENGAL RAILWAY.			CALCUTTA AND SOUTH-EASTERN RAILWAY.			BENGAL CENTRAL RAILWAY.		
	Gross earnings.	Working expenses.	Net earnings.	Gross earnings.	Working expenses.	Net earnings.	Gross earnings.	Working expenses.	Net earnings.

1st 1886 ...	23,34,718	10,53,667	6,81,051				3,13,911	3,20,324	-6,413

Many important capital works were in progress during the year, the principal of which were—(a) the doubling of the line from Sealdah to Naihati in anticipation of the additional traffic which may be looked for upon the opening of the Hughli bridge; (b) the Kidderpur Dock extension line; (c) alterations at Clitpur for the more convenient handling of goods traffic; (d) alterations at Sealdah; (e) new alignment at Goálanda; (f) staff quarters at Narcoldanga; (g) engine shed at Narcoldanga; (h) head-quarter offices, Sealdah; (i) additions to the Kanchrapara workshops. Heavy repairs and renewals of permanent-way and additional sidings were also carried out. The line suffered severely from the floods of 1885, through goods traffic having been stopped from the 9th September to the 4th October, but the first and second class passenger and mail and parcel traffic was kept going by boat and trolley service. Certain alterations of levels of formation and increases of waterway are under consideration with a view to the prevention of a similar calamity in future.

Despatch steamer services run between Goálanda and Dacca, and between Diamond Harbour and Kakrahati. On June 1st, 1885, the India General Steam Navigation Company started a despatch service between Náráinganj and Cachar and South Sylhet. The same steamer company also worked the Eastern Bengal State Railway cargo steamers and flats under an agreement. Owing to competition with the Inland Flotilla Company rates ruled very low, especially those for jute and seeds. Numerous changes and alterations were made during the year in coaching and goods rates with a view to meeting the keen river competition. The rolling stock consisted of 82 engines, 335 coaching and 1,662 goods vehicles.

BENGAL CENTRAL (ASSISTED) RAILWAY.

5' 6" GAUGE.

This line, which is the property of a company, is worked by the Eastern Bengal State Railway under an agreement which it is intended shall remain in force until the 1st July 1886. The terms of this agreement are that—1st, the company shall bear all charges for and carry out all maintenance of way and works, such expenditure being limited at the discretion of the Manager, Eastern Bengal State Railway, to 25 per cent. of gross earnings; 2nd, that the company shall or shall not bear their share of telegraph, police and other “general charges,” according as such charges are or are not included in the working expenses of the whole system of lines worked by the Eastern Bengal State Railway agency; 3rd, that Government shall purchase the company's rolling-stock upon agreed terms, and that at the expiry of this or succeeding agreements, the company shall buy back such rolling-stock at a valuation; 4th, that the State shall provide rolling-stock sufficient for working the line, charging the company for such service 5 per cent. of the gross earnings of the company's line; 5th, that for working their line the State shall charge the company, half-yearly, a percentage of the gross earnings of the company's line, at the same rate as the working expenses of the whole system worked by the Eastern Bengal State Railway agency, exclusive of expenses appertaining to maintenance of way and works, bear to the gross earnings of the system for the same half-year; 6th, after deducting from the gross receipts of the company's line the payments to be made on account of general charges and working expenses, the balance is to be divided between Government and the company in the proportion of one-fifth to Government and four-fifths to the company, the latter's share being diminished by the amount of their payment for hire of rolling-stock. There are also sundry other clauses in the agreement relating to rates, fares, the keeping of accounts, the submission of returns, and contribution to funds. It will be observed that the terms of this agreement are generally similar to those under which the State branches of the East Indian Railway are worked by the East Indian Railway Company.

The total capital outlay of the company up to the end of 1885 was Rs. 89,17,480, of which nearly 3 lakhs had been spent in 1885. The Government of India's outlay on account of land for the company had amounted to Rs. 7,29,929 up to the end of March 1886, and out of this Rs. 1,00,720 had been spent in the year under review. The gross revenue for 1885 amounted to Rs. 5,35,353, and working expenses to Rs. 5,27,119. There was a small but satisfactory increase in the earnings of Rs. 86,316 as compared with the year 1884. The earnings from goods traffic were only about one-seventh of all earnings from other sources. This disappointing result was undoubtedly due to the severe competition of boats upon the natural waterways which intersect the country.

The line had the misfortune to suffer severely from floods during 1885; communication was broken between the 13th September and the 25th October; the mail and passenger service was, however, kept open by means of a boat and trolley service. Had it not been for these exceptional circumstances, the results of the year's working would have been doubtless more satisfactory. The establishment of a bonded salt godown at Khulna has been for some time under consideration, and a hope is entertained by the company that if the proposed arrangement is carried out, an impetus may be given to the goods traffic at that place. Feeder roads are badly wanted. The length of main line was 125½ miles and of sidings 19½ miles at the end of the year under review. The rates for passengers and goods remained unaltered during the year, the former being 12, 6, 4½ and 3 pies, respectively, for the four classes, and the most important of the latter being ½th and ¼th pie per maund per mile for pressed and unpressed jute. 717 persons were employed by the company, of whom 7 were Europeans or Eurasians.

RANAGHAT-BILAGWANGOLA (IMPERIAL) STATE RAILWAY.

5' 6" GAUGE.

With the exception of a small outlay of Rs. 764 upon land acquisition, work upon this line has continued to be suspended. Some additional expenditure still remains to be incurred on account of land. Nothing has been done beyond the first 23 miles. The total expenditure up to the end of the year under review amounted to Rs. 2,93,656, of which Rs. 66,008 was provincial money, which was spent upon surveys in the years 1878-81. Through an error in last year's report the whole of the outlay was said to be imperial. It is possible that the 23 miles up to Kishnagar may, if completed, become a useful feeder to the Eastern Bengal State Railway.

DACCA (PROVINCIAL) STATE RAILWAY.

METRE GAUGE.

The work upon this line during the year under review consisted of the completion of the various works preparatory to opening for traffic. The sanctioned estimate of Rs. 60,68,313 had been practically worked up to at the close of the year, the expenditure being Rs. 60,10,031, of which Rs. 10,97,042 was spent during the year under review: an additional expenditure of Rs. 3,06,560 has also been incurred on account of loss by exchange since the commencement. As was to be expected for a new line working for the greater portion of the time in short lengths, the revenue transactions do not show a satisfactory result. Gross receipts were Rs. 1,27,229, and working expenses were Rs. 1,81,576: the line was therefore worked at a loss of Rs. 57,347, which includes a small debit of Rs. 90 to working expenses on account of loss by exchange. Interest amounting to Rs. 2,14,959 was paid to the Government of India during the year; and as interest will in future years mount up to Rs. 2½ lakhs, or even more, a considerable period may be expected to elapse before the line becomes remunerative. The sanctioned estimate will apparently be exceeded by about five lakhs, the greater part of which is due to the land having cost more than was anticipated by the original estimators, and to the damage done to the new works by the rains and by the earthquake of 1885.

The several sections of the line were opened from time to time as follows:—Naráinganj to Dacca, 10¼ miles, for passengers and goods, 4th January 1885; Dacca to Maimansingh, 75¼ miles, for goods, 1st August 1885; Gaffargaon to Maimansingh, 23¼ miles, for passengers, 29th August 1885; Dacca to Joidebpur, 20 miles, for passengers, 12th December 1885; Joidebpur to Gaffargaon, 32 miles, for passengers, 18th February 1886. When the erection of the stock which is now at site has been completed, the line will be equipped with 12 engines, 60 coaching vehicles, and 345 goods vehicles, but the rapid development of passenger traffic appears likely to demand an additional supply of third class carriages. The prospects of goods traffic are less promising; its slowness of development must to some extent be attributed to the damage caused by floods to the Eastern Bengal State Railway during the year under review. The competition with boats for the carriage of jute, which is the principal staple, is very severe. The railway rate for unpressed jute is ¼ pie per maund per mile. The goods traffic on the Brahmaputra and Ganges between Náráinganj and Goálanda was worked under an agreement with the India General Steam Navigation Company.

Naráinganj coal is in use upon the line, but an experimental lot of Makum coal from Assam was under trial. Loss by exchange, which under recent orders will in future be amalgamated with the capital cost of the line, had up to the end of the year under review amounted to Rs. 3,00,760. The value of stores in stock, which were included in the total capital expenditure, stood at the end of the year under review at Rs. 2,14,000. It has been arranged that from the 1st July 1886 the line is to be worked by the Eastern Bengal State Railway, with which it is connected by the Náráinganj-Goálanda steamer service. Major Engledue, R.E., continued in charge as Engineer-in-Chief and Manager, assisted in the Traffic Department by Mr. F. C. Rogers.

NORTHERN BENGAL (PROVINCIAL) STATE RAILWAY.

METRE GAUGE.

The gross receipts of the Northern Bengal State Railway reached a higher figure during the year under review than had ever been previously attained to. Owing, however, to the continuance of heavy expenditure upon renewals of permanent-way, the working expenses still remained abnormally high. About 10 lakhs of cubic feet of ballast were spread during the year, eleven miles of rails renewed, and the laying of an additional sleeper per rail, and the consequent re-spacing of the remaining sleepers, were completed upon the main line. Of the 600,000 sleepers which were in use, 72,500, or 12 per cent., were renewed during 1885; about one-eleventh of the whole number of sleepers in use were iron or steel, and of this class only about one in a thousand required renewal. Eleven miles of rails had to be renewed as compared with $4\frac{1}{2}$ miles in the previous year. Considerable progress was made upon capital works generally throughout the line, such as gate lodges, tanks, a well, and staff quarters. Coal was supplied by the Bengal Coal Company at the rate of Rs. 8.3 delivered at Shamnagar station on the Eastern Bengal State Railway, about 100 miles from the Ganges ferry. The consumption of coal was 34.07 lb per train-mile, or 29.80 lb per engine-mile, both of which figures compare somewhat unfavourably with those of several previous years. The entire cost, however, of the Locomotive Department compares very favourably with the results of the previous four years, having been Rs. 2.75 per 1,000 gross ton-miles as against an average of Rs. 3.20 in the previous four years: similar remarks apply to the cost of engine and carriage and wagon repairs. The rolling-stock received an addition of 100 goods wagons, 5 other vehicles, and 11 new engines during the year, and of these 10 were of a more powerful type than had previously been in use: this is one of the causes to which the Manager attributes the economy which was exhibited in the working of the Locomotive Department. A very satisfactory decrease took place in the value of stores in stock, which was reduced during the year from $7\frac{1}{2}$ lakhs to $5\frac{3}{4}$ lakhs.

On the 31st March 1886 the capital account of the line stood at Rs. 2,27,72,292, inclusive of Rs. 8,63,030 loss by exchange, so that the $249\frac{1}{4}$ miles had cost about Rs. 91,000 a mile: the capital outlay during the year was Rs. 2,92,971, inclusive of Rs. 56,460 loss by exchange. The results of the working of the line since its opening are exhibited in the following table:—

YEAR.			Gross receipts.	Working expenses.	Net receipts.	Interest paid by Provincial to Imperial	Profit or loss to Bengal.
			Rs.	Rs.	Rs.	Rs.	Rs.
1877-78	1,71,114	1,64,016	7,098	6,00,930	—5,93,832
1878-79	10,92,892	8,95,730	1,97,162	7,90,580	—5,93,418
1879-80	14,67,806	12,98,647	2,39,159	9,05,281	—6,66,122
1880-81	17,03,253	9,25,18	7,78,064	9,41,138	—1,63,074
1881-82	19,27,411	99,60,460	9,66,951	8,40,956	1,25,995
1882-83	22,79,904	10,71,528	12,08,376	8,38,367	3,70,009
1883-84	21,32,741	12,35,430	8,97,311	8,49,304	48,007
1884-85	21,66,282	15,20,316	6,45,966	8,28,068	—1,82,102
1885-86	23,39,204	14,90,71	8,48,833	8,31,540	17,293

Loss by exchange on revenue account, amounting to Rs. 20,680, was included in the working expenses of 1885-86.

Three exceptional misfortunes were experienced by the Northern Bengal State Railway during the year under review—1st, a laden cargo barge was wrecked at the ferry, which involved a loss of Rs. 15,000 to revenue, as well as a much heavier loss to capital; 2nd, many of the works along the line were severely shaken in the earthquake of July 1885; and 3rd, the line lost heavily owing to the severe damage which occurred upon the Eastern Bengal State Railway on account of exceptionally heavy floods. In addition to all this, the working of the Sara ferry was rendered exceptionally difficult and

expensive by changes which occurred in the river bed. That in spite of all this the results of the working should have been what they have been is matter for congratulation. An inspection of the figures for the five calendar years 1881-85 shows that the average receipts from goods traffic upon this railway are about double those from passengers, and that the one item of jute alone is the source of one-third of the gross receipts of the line: manufactured jute or gunny forms about one-eighth of the whole of the jute which is carried.

The charge for the crossing of passengers and goods over the Sara ferry was reduced at the beginning of 1885 from the equivalent of 20 miles of ordinary railway to 12 miles. A ferry is in any case so serious an impediment to the flow of traffic that it was considered that in the interest both of the railway and of the public it would be advisable to make as little profit out of it as possible. The result of the reduction has been awaited with some anxiety, and it is therefore satisfactory to observe that during the year under review the gross receipts on account of the ferry were Rs. 2,01,189, against which the expenditure was only Rs. 1,69,434; and as the interest upon the capital cost of the ferry amounted to Rs. 17,763, there was a net profit of about Rs. 14,000, which may be taken as indicating careful and economical working. 2,976 Natives and 90 Europeans and Eurasians were employed during the year, of whom 571 were depositors in the Provident Institution, with Rs. 1,30,878 at their credit; 101 of the employes were enrolled as volunteers, which compares favourably with the number (82) at the end of the previous year. The management of the line continued to be in charge of Major Savi, R.E., assisted in the Locomotive Department by Mr. A. Morton, in the Traffic Department by Mr. C. J. Keene, in the Engineering Department by Mr. J. M. Chabrel, and by Mr. F. Morrison as Examiner of Accounts.

KAUNIYA-DHARLA (PROVINCIAL) STATE RAILWAY.

2' 6" GAUGE.

The gross receipts of the Káuniyá-Dharlá State Railway have been lower during the year 1885-86 than in either of the two previous years, and the net receipts were less than half the previous figures. This result must be ascribed to reductions which have been made both in passenger fares and goods rate. These reductions are, however, reported to have produced a development of passenger traffic during the last quarter of the year, and there is reason to hope that the earnings of the line will recover from their temporary depression after a reasonable interval. The net receipts from the steamer service of the line amounted to Rs. 32,370, and as the net receipts of the whole line were only Rs. 19,617, it appears that the railway portion of the line was worked at a loss of Rs. 12,753.

The Káuniyá-Dharlá State Railway was intended to meet the urgent demand for quick communication with Assam for the cooly traffic. It is observed, however, that during the last three years the gross earnings on account of this class of traffic averaged only about one-eighth of the entire passenger earnings, and that the number of coolies carried was only about one-fourth the number of ordinary third class passengers. Many of the latter were probably free emigrants to the tea gardens. As might have been anticipated from the serious impediment offered by the ferries to the flow of heavy traffic, as well as from the competition of steamers on the Brahmaputra, the receipts from goods traffic were only about one-fourth those from passengers. The following table shows the results of the working of the line since its opening:—

YEAR.			Gross receipts.	Working expenses.	Net receipts.	Interest paid by provincial to imperial.	Profit or loss to Bengal.
			Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	6,681	Nil	6,681
1882-83	1,06,275	90,392	13,174	...	13,174
1883-84	1,10,794	1,00,748	37,163	...	37,163
1884-85	1,56,755	1,19,799	31,217	31,217
1885-86	1,29,808	1,10,191	19,617	19,617

The net receipts have fallen short of 4 per cent. upon the capital outlay since the commencement by about Rs. 60,000, but as the entire capital has been found from provincial revenues, no interest is paid on it. Up to the end of the year under review the capital outlay had amounted to Rs. 9,60,771, out of which the ferries had cost Rs. 1,24,394. Rupees 21,581 were spent during the year under review. Loss by exchange has always been amalgamated with the other expenditure on account of this line. Bengal coal was in use upon the locomotives, and Makum coal upon the steamers. Seven new vehicles were added to the stock of the line during the year. The Káuniyá-Dharlá State Railway continued to be managed by the staff of the Northern Bengal State Railway as heretofore.

ASSAM-BEHAR (PROVINCIAL) STATE RAILWAY—A.-B. SECTION.

METRE GAUGE.

Considerable progress was made during the year with the construction of this line, the expenditure which was incurred having been Rs. 23,79,332, inclusive of Rs. 2,48,280 loss by exchange. The entire capital outlay up to the end of the year under review had amounted to Rs. 46,87,985, which includes Rs. 2,83,940 on account of loss by exchange. The amount payable to the Government of India on account of interest was Rs. 1,31,769 for the year, and Rs. 1,91,247 since the commencement. Rupees 51,439 of the capital was found from provincial sources.

Construction operations were confined to the sections between Manihári and Kasba, $37\frac{1}{2}$ miles, and between Dinajpur and Raiganj, $31\frac{1}{2}$ miles, the programme being to open the former section as early as possible, so as to provide an outlet for the traffic of the Purniah district towards the station of Sahibganj on the East Indian Railway, and to open the latter section so as to give a branch $50\frac{1}{2}$ miles long to the Northern Bengal State Railway westward from Parbatipur. The work suffered severely from floods during the rains of 1885, five small bridges upon the nine miles north of Manihári having been washed away owing to the absence of stone-pitching, which would have been ready at site had not the grant for the work been greatly cut down.

By the end of the year under review the line was in good running order from Manihári to Kasba. From the Dinajpur side towards Raiganj considerable progress had also been made, and a grant of moderate amount will now suffice to open the section for traffic. Nothing was done during the year upon the $33\frac{1}{2}$ mile section north of Kasba, upon which three quarters of the earth-work had been completed during the previous year, nor upon the $37\frac{1}{2}$ miles between Raiganj and Katiyar upon which considerable progress had been made in the previous year. The balance at debit of Suspense at the close of the year was nearly $11\frac{1}{2}$ lakhs, of which over 5 lakhs represented the cost of permanent-way not yet put into the road, and nearly 4 lakhs was the cost of bridgework, fencing, and other stores not yet charged off to work. The early completion of the Manihári-Kasba and Dinajpur-Katiyar sections is much to be desired, as, pending their opening for traffic, the Province is heavily burdened for payment of interest upon the unproductive capital. The work continued to be in charge of Mr. F. B. Walker as Engineer-in-Chief.

ASSAM-BEHAR (PROVINCIAL) SURVEYS.

METRE GAUGE.

The accounts of this survey have now been closed by the distribution of the total expenditure (Rs. 39,752) between other works in the following proportion:—Rs. 20,319 has been transferred (as a contribution from Provincial to Imperial) to the capital account of the A.-B. section of the Assam-Bihar State Railway; Rs. 2,480 to the capital account of the Káuniyá-Dharlá State Railway; and the balance Rs. 16,953 to the account of Rungpur-Dhubrí Survey. The expenditure upon this latter work, all of which is Provincial, has now amounted to Rs. 52,617, and should the Northern Bengal State Railway be ever extended eastward from the Tista to Dhubrí, this expenditure would be amalgamated with the construction capital. The latest information regarding the present state of the enquiry as to the practicability of the extension to Dhubrí will be found near the end of this report.

TIRHÚT (PROVINCIAL) STATE RAILWAY.

METRE GAUGE.

The length of line open for traffic remained practically unchanged since the end of the previous year, viz., 226 miles. The capital expenditure during the year was represented by a net credit of Rs. 4,90,355, due to the transfer of the store accounts of the Tírhút State Railway to the Tírhút section of the Assam-Bihar State Railway. The total capital outlay up to the end of the year was Rs. 1,52,70,705, inclusive of Rs. 6,88,480, loss by exchange. The gross receipts on revenue account were Rs. 12,80,258, and working expenses Rs. 9,15,584, so that the net receipts were Rs. 3,64,674. The interest charges during the year were Rs. 5,91,961, and the net result to Bengal was therefore a loss of Rs. 2,27,287. These figures include a charge for loss by exchange on revenue account amounting to Rs. 3,520.

The coal consumed on the line was supplied partly by the East Indian Railway, and partly by the Rániganj Coal Company, at a cost to the line of about Rs. 9 per ton: the consumption was about 25·26lb per engine-mile. The replacement of the old creosoted pine sleepers between Somastipur and Muzaffarpur was completed during the year. Various other works were also in hand or completed, such as officers' quarters, small goods sheds, and fencing. At the close of 1885 there was a balance of about 10½ lakhs worth of stores in hand, consisting chiefly of ballast and permanent-way. The whole of the stores, however, were borne on the books of the Tírhút Section of the Assam-Bihar State Railway. The following statement exhibits the result of the working of the line since the commencement so far as it affects Bengal:—

YEAR	Gross receipts.	Working expenses	Net receipts.	Interest paid by Provincial to Imperial.	Loss to Bengal.
	Rs.	Rs.	Rs.	Rs.	Rs.
1875-76	18,042	44,067	7,983	Nil	Line imperial.
1876-77	2,13,578	1,11,893	71,679	Nil	" "
1877-78	3,13,246	2,37,714	1,07,512	2,13,984	—1,06,472
1878-79	4,19,898	3,27,939	1,19,878	2,31,343	—1,11,465
1879-80	4,76,922	3,47,273	1,33,649	2,14,915	—1,07,366
1880-81	5,13,780	3,15,512	2,27,878	2,58,165	—30,387
1881-82	5,78,781	3,19,042	2,29,739	2,93,577	—63,838
1882-83	7,09,812	4,10,520	2,69,292	4,06,374	—1,41,082
1883-84	9,81,067	6,78,626	3,02,441	5,17,447	—2,14,906
1884-85	12,19,716	9,08,172	2,81,544	5,81,444	—3,00,000
1885-86	12,80,258	9,15,584	3,64,674	5,91,961	—2,27,287

The Manager reports as follows upon the effect of the reduction from 2½ to about 1½ pies per mile which in the previous year was made in third class passenger fares:—"This reduction has contributed largely to induce the lower orders of people to use the railway more, and for short journeys particularly. The number of passengers in this class has been 66·72 per cent. more than that of last year, and the receipts therefrom show a better return by 11·96 per cent." : these remarks apply to the calendar year. The result is satisfactory. As an instance of the very various conditions of traffic which prevail in different parts of Bengal, it may be mentioned that, while on the Northern Bengal State Railway goods receipts are just about double the receipts from passengers on an average of years, the former exceed the latter by an average of only about 10 per cent. on the Tírhút State Railway. The weight of, and earnings from, goods traffic showed a considerable improvement in 1885 as compared with corresponding figures for 1884: this branch of traffic is at present, however, seriously hampered by deficiency of rolling-stock, but it is hoped that in 1886-87 this may to some extent be remedied.

The volunteer corps consisted of 2 officers, 10 non-commissioned officers and 56 volunteers, and their attendance at drill was reported as satisfactory. The management remained during the year in the hands of Mr. Horace Bell, M.I.C.E., assisted by in the Engineering department Mr. D. F. Hogarth, M.I.C.E., by Mr. H. M. Cardew as Locomotive Superintendent, Mr. W. Sandford as Traffic Superintendent, and Mr. H. Stuart as Examiner of Accounts.

TIRHÚT SECTION OF ASSAM-BEILAR (PROVINCIAL) STATE RAILWAY.

METRE GAUGE.

This consists, as explained in last year's report, of the section, $2\frac{1}{2}$ miles in length, containing the Gunduk Bridge which will connect the Tírhút and the Bengal and North-Western Railways, and the extension of the Durbhungah branch of the Tírhút State Railway to the eastward towards the Kosi. Work upon the Kosi extension extended over a length of about 23 miles, up to the Tiljuga river, and a portion of this length, viz., up to Gongareria, 14 miles, was completed and ready for traffic at the end of the year. From Gongareria a further distance of 6 miles to Nirmali was completed sufficiently for goods traffic at a slow speed. The capital outlay on these extensions during the year was Rs. 18,69,450, and since the commencement Rs. 30,10,160, inclusive of Rs. 96,340, loss by exchange. Good progress was made upon the Gunduk Bridge. At the end of the year five out of the seven piers had been founded, and masonry had been carried up to the level of the bedstones; the abutments were equally forward, and the long viaduct at the Sonpur side was completed up to the parapet coping; all earthwork and minor bridges on the approaches were practically completed. It is anticipated that the bridge will be open for traffic before the end of 1886-87.

Mr. H. Bell was in charge of this section as Engineer in-Chief, and Mr. R. E. Way was in immediate charge of the Gunduk Bridge.

BENGAL AND NORTH-WESTERN (ASSISTED) RAILWAY.

METRE GAUGE.

The length of the main line from Sonpur to Baraich is $273\frac{1}{2}$ miles; of the branch to the Gogra opposite Ajodhya (Oudh) to meet the Oudh and Rohilkund Railway, 20 miles; of the Ganges Loop line near Sonpur, $9\frac{1}{2}$ miles. Total length open, 303 miles, of which $92\frac{1}{2}$ lie within the boundaries of Bengal. The extensions, all of which lie in the North-Western Provinces and Oudh, are the branch, $39\frac{1}{2}$ miles long, from Gorakpur to Uska, which has made good progress towards completion, and the extension of the main line from Baraich to Nipalganj, $33\frac{1}{2}$ miles, which is also approaching completion. A survey, 6 miles in length, from Chuprah to the large grain mart of Revilganj at the junction of the Gogra and Ganges was under consideration. The remaining extensions of the system which were originally contemplated are at present in abeyance. Many important capital works made good progress during the year. The Rapti Bridge, nine spans of 150 feet, was nearly finished. The temporary workshops at Sonpur are still in use, as the erection of permanent workshops has for the present been deferred. The Ganges Flotilla, connecting the Digha Ghât branch of the East Indian Railway with the eastern terminus of the Bengal and North-Western Railway consists at present of two steamers, a launch, eight flats, and two landing stages. This stock is, however, insufficient, and will have to be augmented. The rolling-stock consisted of 35 locomotives, 184 passenger and 755 goods vehicles, and 15 passenger and 201 goods vehicles in addition remain still to be erected. About $14\frac{1}{2}$ lakhs was the value of stores in stock.

The total capital outlay of the company up to the end of 1885 was Rs. 68,17,934 gross earnings during the same year 1885 were Rs. 12,05,541; working expenses were Rs. 6,16,334; and net earnings were therefore Rs. 5,89,20.

Bengal coal is in use, and the expenditure has been 28.75lb per train-mile, or 169.57lb per 1,000 gross ton-miles. Traffic has shown a steady development. The principal staples carried are grain, pulse, and seeds, the weight of which is very largely in excess of all other commodities: the rate for these staples was one-sixth pie per maund per mile. The third class passenger fare was 2 pies per mile. Through booking of goods with the Tírhút State Railway was established on the 1st December 1885. Pending the opening of the Gunduk Bridge, the ferry over the Gunduk is worked by the company. Agent reports that the establishment of through booking between the two railways has been very beneficial to his line, and promises to be much more so.

DARJILING-HIMALAYAN (ASSISTED) RAILWAY.

2' GAUGE.

Passenger traffic was worked without a break during the year, but through goods traffic was interrupted by slips during ten days of July and five days of September 1885. The capital of the company remained at the previous figure, Rs. 27,25,000, but the amount, Rs. 30,000, which had been incorporated into capital from profits was transferred during the year under review as a loan from revenue to capital. The total capital outlay stood at Rs. 26,77,718 upon the 31st December 1885, which gives an average cost per mile of Rs. 52,763. Four years working results are as follows :—

YEAR.			Gross earnings.	Expenditure.	Net earnings.	Percentage of expenses to earnings.	Percentage of earnings to capital.	Traffic mileage
			Rs.	Rs.	Rs.			
1882	3,66,475	2,44,490	1,21,981	66.72	5.17	144,724
1883	4,21,944	2,66,219	1,55,725	63.11	5.98	138,843
1884	4,35,024	2,88,259	1,46,765	66.25	5.52	123,205
1885	4,34,901	2,67,753	1,66,248	61.69	5.98	103,001

The dividend for the year 1885 was $7\frac{1}{4}$ per cent. The earnings from goods traffic were nearly two-thirds of all other earnings in 1885. The mileage of the line was found to be $50\frac{3}{4}$ miles instead of 50, and from the 1st January 1885 the fares and rates were correspondingly increased. Four new second class and seven new goods vehicles were added to the stock of the line during the year. About half a lakh worth of stores were in stock at the end of 1885.

The company continued to use Bengal coal during 1885-86, but an agreement is reported to have been recently entered into with the Assam Railways and Trading Company for a supply of coal from Makum upon favourable terms. 30,327 passengers and about 17,000 tons of goods were carried during 1885. The company now provides its own police staff. The line continued in charge of Mr. F. Prestage as Managing Director.

DEOGARH (ASSISTED) RAILWAY.

METRE GAUGE.

At the request of the company, the Rohini branch, $1\frac{1}{2}$ miles in length, was, with the permission of the Government of India, closed on the 1st November 1885. The length of the line is now only 4 miles. The results of the working are given in the following table :—

HALF-YEAR.		Earnings.	Expenditure.	Net earnings.	Number of passengers.	Maunds of goods.	Dividend per cent.
1st of 1883	...	9,994	6,150	3,844	72,774	Nil.	$2\frac{1}{2}$
2nd "	...	9,645	7,247	2,398	68,313	11,803	...
1st 1884	...	10,808	6,819	3,989	77,380	22,322	...
2nd "	...	12,927	6,212	6,715	96,276	13,747	$2\frac{1}{2}$
1st 1885	...	13,868	7,223	6,645	105,803	19,052	$2\frac{1}{2}$
2nd "	...	10,119	6,855	3,264	77,329	38,544	$2\frac{1}{2}$
1st 1886	...	12,297	6,775	5,522	86,264	81,540	2

The total capital outlay of the company up to the end of 1885 was $2\frac{3}{4}$ lakhs. In the second half of 1885 there was a marked improvement in goods traffic, but the widespread floods all over Bengal caused a considerable falling off in passenger traffic. Messrs. Burn and Company, of Calcutta, are the Agents, and were the constructors of this line.

BENGAL-NAGPUR (IMPERIAL) STATE RAILWAY.

5' 6" GAUGE.

The following is extracted from the Director General of Railways' Administration Report:—"Owing to negotiation for the formation of a company to construct and work this line not having been completed, and the financial pressure, work had to be suspended during the year: the small staff the conver-
the
pur.

Land acquisition has also been in progress in the Manbhum and Singbhum districts in Bengal, and in the Bilaspur district and Native States within the Central Provinces."

BENARES-CUTTACK-PURI (IMPERIAL) RAILWAY SURVEYS.

5' 6" GAUGE.

Up to the end of the rains of 1885 the survey party were employed in plotting the previous year's field work, and in preparing plans and estimates. The cold season's work of 1885-86 consisted chiefly of the location of about 182 miles of railway, which, with the exception of a 7-mile line to connect Cuttack with the main line, extended from a point 49 miles north of Puri, crossing the Mahanadi river at Naraj, and through the Talcher coalfields, past Sambulpur to the Bengal-Nagpur Railway at Panchpara, which station is about 245 miles west from the junction of the Bengal-Nagpur and East Indian Railways, and 382 miles east from Nagpur. The distances, therefore, from Nagpur to Puri by this route would be 606 miles, or from Bilaspur to Puri 344 miles. An alternative route to connect Panchpara with the neighbourhood of Palamau was also reconnoitred by the party. So far as can be judged from the information which has now been collected, the Panchpara-Puri route appears to possess many advantages over the others which were previously surveyed. The work continued during the year under review to be in charge of Mr. W. H. Parker, M.I.C.E. It is expected that it will be finally closed by the end of the rains of 1886. The capital outlay which up to the end of 1885-86 had been incurred upon the survey was Rs. 6,97,646, of which Rs. 2,04,521 were expended during the year under review.

KAUNIYA-DHUBRI (IMPERIAL) SURVEYS.

METRE GAUGE.

In last year's Administration Report it was mentioned that "the 55 miles which intervene between the Káuniyá terminus of the Rungpur branch of the Northern Bengal State Railway and Dhubrí on the Brahmaputra have been variously estimated at 62, at 122, and at 132 lakhs. The larger discrepancies between these various estimates are due principally to differences of opinion as to the proper method of crossing the great rivers that are encountered, as will be understood when it is explained that, omitting these bridges, the several estimates very closely approximate to the same figure—Rs. 76,000 per mile of ordinary railway. Early in the year 1885, therefore, the Government of India nominated Mr. R. T. Mallett, M.I.C.E., to make a new survey and to give an independent opinion upon the probable cost of this section, and at the same time intimated that the section, if ever constructed, would be an Imperial work. All plans and sections were therefore, at the end of January 1885, handed over to Mr. Mallett," whose report goes to show that the rivers intervening between Káuniyá and Dhubrí are not so formidable as had been previously considered, and that it is practicable to connect Káuniyá and Dhubrí by a metre gauge railway, including the cost of the four large bridges, for about 63½ lakhs of rupees. In November 1885 the Government of India called for a further investigation of the possibility of substituting Bagwa, a point on the Brahmaputra below the outfall of the Tista-Dharlá and other rivers, in place of Dhubrí as the terminus of the Assam-Bihar State Railway. Mr. Mallett's opinion upon this proposal was, however, unfavourable.

NALHATI (PROVINCIAL) STATE RAILWAY.

4' GAUGE.

Upon the recommendation of the Government of Bengal, that it would be preferable to run the traffic at a reduced rate of speed rather than to incur heavy expenditure upon the renewals of a line of an antiquated gauge, permission was given by the Government of India to reduce speed from 12 to 10 miles an hour, and the change was carried out on the 1st November 1885.

Subject to this reduction of speed, the line is reported by the Consulting Engineer to be fully competent to carry its present traffic. Nothing deserving of special notice occurred during the year. The gross receipts were Rs. 78,803; working expenses Rs. 71,100, inclusive of a debit of Rs. 5,100 to working expenses on account of loss by exchange; net receipts were therefore Rs. 7,703; interest paid by Local to Imperial Government was Rs. 13,827. The net loss to the provincial Government was therefore Rs. 6,124. The capital outlay, inclusive of Rs. 11,860 loss by exchange, up to the end of the year under review, was Rs. 3,54,895, and the capital transactions during the year consisted of a credit of Rs. 5,299. The line continued during the year under the management of Baboo R. G. Mookerjee.

MISCELLANEOUS.

Administrative charges.—The expenditure under this head on account of the Railway portion of the Bengal Secretariat during the year under review amounted to Rs. 58,779. This has hitherto been accounted for as capital expenditure, but in future years it will probably be amalgamated with the general charges for Provincial Administration.

Palamau Survey.—The provincial expenditure of Rs. 4,692, which was incurred in 1878-79 upon this survey, has been refunded to Bengal by the Government of India, and an equivalent amount of Imperial money added to the Imperial expenditure of the Benares Cuttaek-Puri Railway Survey.

Calcutta Central Station.—The small outlay of Rs. 230 which was spent in 1883-84 on establishment employed for the valuation of land, which it was supposed would be required for the proposed Calcutta Central Railway Station, has been written back in the accounts of 1885-86 to "Administrative charges," and the head "Calcutta Central Station" removed from the accounts.

Muzaffarpur-Sitamarhi (Provincial) Survey.—The expenditure upon this survey was only Rs. 12 during the year; and has now been closed, the total outlay being Rs. 21,105. There appears to be no immediate prospect of this projected branch of the Tirhut State Railway being carried out. Certain additional expenditure which, at the request of the Revenue Department, was incurred upon land and earthwork, is to be charged to Famine Relief.

Sultanpur-Bogra Roadway.—The expenditure of Rs. 15,920 Provincial money, which was incurred to end of 1885-86, and a small additional sum of Rs. 266, which was spent in 1886-87, will be transferred to the civil head, Famine Relief, and the accounts closed.

Barrackpur-Chitpur Railway.—Further enquiries were made during the year as to the probable cost of an alternative approach to Calcutta, independent of the Eastern Bengal State Railway, so as to provide increased facilities for the access of the East Indian traffic to Calcutta on the opening of the Hughli Bridge. This question is still under the consideration of the Government of India. The cost of the enquiry was borne by the ordinary Provincial Public Works grant.

Khairabad-Rupnarainpur Railway.—This colliery branch of the East Indian Railway was opened for coal traffic during the year.

Chittagong Railway Survey.—Nothing further has been done upon survey, which, as mentioned in last year's report, has been amalgamated the Bengal-Assam Railway surveys under the Director-General of Railways.

Howrah-Anapta Railway.—This project remained in abeyance.

The following projects also remain in abeyance:—

Bardwan-Katwa Ry.
Kuch-Behar Ry.
Behar Ry.

Kishanganj-Kotchandpur Ry.
Rajbari-Faridpur Ry.
Jalpaiguri-Ballabari Ry.

Pabna-Sara Ry.
Daltonganj-Barun Ry.
Sonthal Railway.

1884-85
1885-86

Bengal paid no interest on this Imperial money.

Rs. 25,35,767, Provincial money, spent in this and former years.

(Government of India pays Bengal Rs. 30,000 per annum in lieu of receipts, and 4 per cent interest upon Rs. 25,35,767, the Provincial share of the capital. In 1884-85 a nine months' share of this accrued to the Province; and in the first three months of that year Rs. 94,454 were received as earnings, against which Rs. 96,006 were working expenses.)

KÁUNIYÁ-DHARLÁ STATE RAILWAY.

1881-82	...	8,32,482	8,32,482	6,681	-6,681
1882-83	...	8,32,482	23,640	8,56,122	15,953	-15,953

NOTE.— Since the date on which the Calcutta and South-Eastern State Railway was taken over by the Government of India, the interest which is credited to the Provincial Government on account of Provincial expenditure on the Sonapur-Diamond Harbour Branch has been treated as a reduction of the whole interest due from Provincial to Imperial upon borrowed capital, and not as a receipt from the railway. The Rs 30,000, however, which Imperial pays annually to provincial, as compensation for the loss of the Calcutta and South-Eastern Railway, has been treated as a revenue receipt.

Telegraph and Post Offices.

TELEGRAPHS.

THERE has been during the year under review a considerable extension of telegraph facilities in the Lower Provinces of Bengal. At the end of the year 1884-85 there were 4,770 miles of telegraph lines open, and an additional 339 miles were erected during the year, making a total of 5,109 miles open at the end of 1885-86. The wire mileage at the end of 1884-85 was 17,083, and that of the additional lines opened 987, making a total at the end of the year of 18,070 miles of wire. No lines were dismantled during the year.

The number of messages despatched from Government offices was 395,312, an increase of 50,203 over that of the previous year. The Indian share of collections on account of these messages amounted to Rs. 6,07,223-4-9. The number of offices open at the end of 1884-85, and the number of new offices opened and of existing offices closed during the year, is shown in the subjoined table:—

	Number of telegraph offices open at end of previous year.	Number opened during the year.	Number closed during the year.	Number open at the end of the year.
Government offices	103	41	2	142
Licensed offices	283	7	3	287
Offices not open for paid messages ..	82	19	101

THE POST OFFICE.

The following statement shows the total number of post offices, letter-boxes, postmen, and village postmen in the Lower Provinces of Bengal. It includes those paid for from the Zemindari Dâk Fund, as well as those paid out of Imperial revenues :—

CIRCLE.	Year.	Post offices.	Letter-boxes.	Postmen.	Village postmen.
Bengal	1884-85	1,206	3,313	1,129	955
	1885-86	1,253	3,457	1,148	1,014
Behar	1884-85	490	418	186	647
	1885-86	514	426	195	669
Eastern Bengal	1884-85	325	638	192	234
	1885-86	337	699	201	249
Total	1884-85 (a)	2,021	4,369	1,507	1,836
	1885-86	2,101	4,582	1,544	1,932

(a) The figures for 1884-85 are revised figures, and differ from those given in last year's report.

There were in the year 1885-86 24,196½ miles of postal lines in the province, maintained both from zemindari and Imperial revenues, against 23,786½ miles in the previous year, showing an increase during the year of 410¼ miles. A detail of the lines is given below :—

YEAR.	Railway lines.	Mail cart lines.	Runner or boat lines.	Steamer lines.	Total.
1884-85 (a)	1,838½	102	18,818½	3,027½	23,786½
1885-86	1,929½	154	19,086	3,027½	24,196½

(a) The figures for 1884-85 are revised figures, and differ from those given in last year's report.

The total number of letters, post-cards, newspapers, packets, parcels, money-orders, and India postal notes received for delivery in Lower Bengal in 1885-86 is estimated at 55,038,438, against 51,980,422 in the previous year, showing an increase of 3,058,016, or 5·88 per cent.

The figures below show the number and value of insured and value-payable articles posted in the Lower Provinces and the commission realized on them :—

	Number.	Value declared.	Commission realized.
		Rs.	Rs.
Insured articles	57,510	1,49,36,356	38,929
Value-payable articles	216,242	22,60,661	42,397

Of the total number (216,242) of value-payable articles posted in the province, 205,428 were posted in Calcutta alone—of the declared value of Rs. 21,59,837. The total number of value-payable articles posted in the year was nearly 26 per cent. above the number posted in 1884-85.

In the year 1885-86 the number of money-orders issued was 1,469,819 and their value Rs. 2,91,56,632. The number paid was 1,519,654 and their value

Money-orders.

Rs. 2,94,56,261. In the previous year the value of the number issued was Rs. 2,50,84,124, and that of the number paid Rs. 2,58,02,349.

The transactions in telegraphic money-orders show a considerable increase since their introduction in October 1884, as will be seen from the following abstract of the issues and payments of these orders for the six months of 1884-85, compared with the figures for 1885-86:—

YEAR.	ISSUES.		PAYMENTS.	
	Number.	Value. Rs.	Number.	Value. Rs.
Six months of 1884-85	... 838	67,851	921	81,416
Ditto of 1885-86	... 2,186	1,76,587	2,614	1,94,335

The number of India postal notes sold and the commission realized in the year 1885-86 are given below:—

Class of notes.	Number sold.	Commission realized.		
		Rs.	A.	P.
A, value Re. 0-8	10,989	120	5	1
B " " 1-0	20,520	337	5	9
C " " Rs. 2-8	8,065	257	2	6
Total	39,574	714	13	4

In the previous year 47,749 notes were sold, and the sum realized as commission was Rs. 861-12-7.

The total number of British postal orders sold during the year under report was 2,173, of which 978 were sold in Calcutta. The orders most in demand are those for 20s., 10s., 5s., 1s., and 2s.

The following figures show the transactions of the Post Office Savings Banks during the year under report:—

Number of accounts opened	23,219
Ditto ditto closed	4,962
Ditto deposits	108,226
Amount of deposits	...	Rs.	63,31,040
Number of withdrawals	56,967
Amount of ditto	...	Rs.	40,98,002
Value of accounts opened at the close of the year		„	59,88,006

The transfer of the District Savings Bank to the Post Office, which took place towards the close of the year under report, has contributed in a large measure to the increase in the number and value of transactions.

An abstract of the sales effected during the year of each denomination of stock notes is given below:—

Value of stock notes.				Number sold.	Amount.
					Rs.
Rs. 12-8 each		12	150
" 25 "	.	.		3	75
" 50 "		6	300
" 100 "	.	.		33	3,300
				—	—
Total				...	54
					3,825

The number of stock notes sold in the previous year was 263, value Rs. 9,450. The largest sales during the year under report were effected through the agency of the Dacca disbursing post office. There being very little demand for stock notes, a large number held by post-masters have been returned to local treasuries.

A detail of the number of Government securities purchased, sold, and deposited during the year is given below :—

				Number.	Value. Rs.
Purchased	340	1,65,900
Sold	11	15,800
Deposited	42	36,200

The number of policies issued during the year was 43, amounting to Rs. 53,250, against 121, of an aggregate value of Rs. 1,76,350, issued in the previous year.

Postal life insurance.

Below is a classification of the employés who insured their lives during the year under report :—

Inspectors	2
Post-masters	6
Sub-post-masters	11
School-masters in charge of village offices	1
Clerks	17
Overseers	3
Postmen	2
Village postmen	1

The total number of privileged papers at the beginning of the year under report was 112, and during the year the proprietors of 51 additional papers availed themselves of the benefit of the system, making a total of 163 privileged newspapers in existence during the year. Of these, 12 ceased to exist, 38 did not renew the privilege, and one was amalgamated with a non-privileged paper, leaving 112 privileged papers existing at the close of the year, against the same number at its commencement.

At the beginning of the year 1885-86 there were 60 combined post and telegraph offices in Bengal. During the year 41 post offices were converted into combined offices, and one (the False Point combined office) was closed, leaving a total of 100 combined offices open at the close of the year under report, against 60 at the close of the previous year. The False Point combined office was closed in consequence of the complete destruction of that station on the 22nd September 1885 by the cyclone and storm-wave which visited the coast of Orissa.

Altogether 61,372 messages were despatched from the combined offices in Bengal during the year 1885-86, the total value of the messages being Rs. 68,724. The total cost of all the offices for establishment and contingencies amounted to Rs. 22,868, leaving a credit balance of income over expenditure of Rs. 45,856. The number of private and State messages received was 62,206, and the number of messages which passed in transit through the offices was 55,138. These figures do not include State, bearing, and foreign messages.

During the year under review there were 61 prosecutions of postal servants, against 59 in the previous year. In 57 cases convictions were obtained. In 4 cases the accused were acquitted by the court, and in 2 cases the conviction of the lower court was quashed on appeal.

In the majority of cases the offence consisted of misappropriation of Government money. The most grave offence was one of forgery of money-orders. Ten money-orders, of the aggregate value of Rs. 5,750, were very cleverly forged by a clerk in the Burra Bazar town sub-office in Calcutta. For a considerable time the forgers were able to escape detection, but eventually the man who devised the fraud and one of his accomplices were apprehended, and both were convicted and sentenced by the High Court to transportation for life.

There were 3 cases of highway robbery of the mail during the year—two in the Pabná district: the first occurred on the 27th November 1885, and the other on the 3rd February 1886. The third robbery occurred on the

10th March 1886 in the Bírbbhúm district. In all three cases the mails were recovered almost intact. The persons suspected of perpetrating the two robberies in the Pabná district were prosecuted, but were acquitted by the court. In the third case no trace could be found of the perpetrators of the deed.

At the beginning of the year under report there were 253 post offices in the province of Bengal, maintained from funds raised under the Zemindari Dák Act, viz., 166 in Bengal, 88 in Behar, and 29 in Eastern Bengal. During the year 13 new offices were opened and 12 closed, leaving a balance at the close of the year of 284. Of this number 164 are in Bengal, 91 in Behar, and 29 in Eastern Bengal.

During the year under review 19 new letter-boxes were opened and 32 closed, leaving a balance of 308 letter-boxes at the end of the year, as compared with 321 at the close of the previous year. Of these, 244 are in Bengal, 52 in Behar, and 12 in Eastern Bengal.

The number of postmen and village postmen maintained from zemindari dák funds during the year was 14 and 1 respectively.

The total mileage of runner lines maintained during the year from the zemindari dák cess was 12,172½ miles, as compared with 12,066½ in 1884-85.

The total number of articles which travelled through the district post was 3,552,154 in 1885-86, against 3,080,605 in 1884-85, showing an increase of 471,549, or 15·30 per cent. The total number returned undelivered was 109,772, against 79,067 in the previous year.

The receipts and charges on account of the district post were as follows:—

			Receipts.			Charges.		
			Rs.	A.	P.	Rs.	A.	P.
Bengal	1,88,381	9	4	1,90,137	8	0
Behar	92,357	6	4	90,399	14	9
Eastern Bengal	46,908	1	11	51,590	4	2
Total	3,27,647	1	7	3,32,127	10	11

The orders directing that only Magistrates and police officers should use the zemindari dák for the transmission of official communications free of charge, were enforced from the 15th May 1885.

V.—REVENUE AND FINANCE.

(a)—Imperial Revenue and Finance.

Receipts in aid of superannuation, &c.	34,395	1,57,345	1,18,950
Miscellaneous	1,70,440	1,17,615	52,825
Gain by exchange on transactions with London	1,00,652	1,00,652
Total	12,31,59,008	12,54,41,784	38,77,267	15,91,491

The following remarks explain the principal items of increase and decrease in Imperial receipts in 1885-86 as compared with those of 1884-85:—

INCREASE.

Land Revenue.—The increase is due to realizations of arrears of revenue in the Bardwán Raj estate.

Opium.—The number of chests sold in 1885-86 was 50,994, against 46,698 in 1884-85, with an average selling price per chest of Rs. 1,246, against Rs. 1,296. The increase was chiefly under sale of Behar opium.

Stamps.—The increase was chiefly under the heads “Sale of court-fees stamps” and “Duty on impressing documents.” The increase under the first head was due to the introduction of the Bengal Tenancy Act, and the extension of the system of levying copying fees by means of these stamps. The augmentation under the second head must be ascribed almost entirely to a single item of receipt on account of probate of a will.

Customs.—The increase occurred both under “Exports and Imports,” due probably to the partial revival of trade.

Assessed taxes.—The increase was due to the revival of trade.

Forest.—The increase appeared under the head “Timber and other produce removed from the forests by consumers or purchasers.”

Registration.—The increase must be ascribed to the normal expansion of registration operations generally.

Interest.—The increase occurred chiefly under Calcutta Port Fund and Hughl Bridge advances.

Receipts in aid of superannuation—The increase is nominal, being due to the adjustment under this head for the first time in 1885-86 of the subscriptions to the Bengal Civil Fund.

DECREASE.

Salt.—The decrease chiefly occurred under “Import duty,” and is due to a check in the import trade in salt which had revived in 1884-85, but which fell off considerably in the year under report.

Excise.—The falling off was due partly to failure of crops and partly to the re-introduction of the sudder distillery system in urban tracts.

Miscellaneous.—The decrease was due to the recoveries on account of the Port Canning estate and sale proceeds of investments belonging to the Nizamut Fund in 1884-85.

Exchange on transactions with London.—Due to change of procedure in the exhibition of accounts.

Statement showing the Imperial expenditure in 1885-86 as compared with that of 1884-85.

MAJOR HEADS.		Actuals of 1884-85.	Actuals of 1885-86.	Increase.	Decrease.
<i>Expenditure.</i>		Rs.	Rs.	Rs.	Rs.

Exchange on transactions with London	3,758	3,758
Total	3,38,61,410	3,43,96,855	10,10,132	4,74,717

The following remarks explain the principal items of increase and decrease in Imperial charges in 1885-86 as compared with those of 1884-85 :—

INCREASE.

Interest on ordinary debt.—The increase is trifling.

Opium.—The increase was chiefly on account of larger payments in the Benares Agency, in consequence of the exceptionally large outturn of the crop.

Salt.—The increase is trifling.

Stamps.—The increase chiefly occurred under “Stamp paper supplied from central stores.”

Excise.—The increase was due partly to the adjustment under this head of salaries of officers employed in the Excise Commission, and partly to the introduction of reforms recommended by that Commission.

Registration.—The increase is trifling.

Police.—Due to larger payments on account of State Railway Police.

Superannuation allowances and pensions.—Due almost entirely to a new Imperial minor head opened in the accounts for 1885-86 for the exhibition of charges on account of pensions of the Bengal Civil Fund.

Stationery and Printing.—Due to the purchase of a large quantity of country paper of various kinds.

DECREASE.

Interest on other obligations.—The decrease is nominal, being due to adjustments in accounts.

Refunds and drawbacks.—Due chiefly to special payments in the previous year.

Assignments and compensations.—Chiefly due to non-payment of compensation to the Bhutan Government for the resumption of the Dooars in Assam.

Land Revenue—Due to the adjustment in 1884-85 of certain expenditure incurred by survey parties.

Assessed taxes.—The decrease is trifling.

Forests.—Chiefly due to smaller payments under "Timber and other produce removed from the forests by Government agency," "Live and dead-stock," "Communications and buildings," and "Miscellaneous."

Administration.—Due to saving in rent caused by the removal of the Accountant-General's office to the new Treasury Buildings, the property of Government.

Ecclesiastical.—Due to the absence of senior Chaplains on leave.

Political.—The decrease chiefly occurred under "Salaries," "Durbar presents, &c."

Scientific and Minor Departments.—The decrease is trifling.

Miscellaneous.—Due to the adjustment in 1884-85 of certain irrecoverable balances.

Famine relief.—Due to the adjustment in 1885-86 of expenditure incurred on account of the relief in the Chittagong Hill Tracts against Provincial revenues.

Exchange on transactions with London.—Due to change of procedure in the exhibition of accounts.

MONETARY ARRANGEMENTS.

The number of savings banks, including Provident Institutions, but exclusive of Post office savings banks, was 53. The following statement shows the number of depositors in the past three years:—

		1883-84.	1884-85.	1885-86.
Presidency savings banks	...	11,912	12,016	11,546
District ditto	...	8,555	9,002	3,940
Provident institutions	...	839	2,468	2,956
Post office savings banks	...	22,542	34,639	45,361

The large decrease in the number of depositors in district savings banks was due to the transfer of the balance of depositors' accounts to the post office savings banks, while the increase in Provident institutions is ascribed to the opening of the Dacca State Railway. The balance at credit of the depositors at the end of the year was Rs. 1,03,89,280, against Rs. 96,19,376 in 1884-85.

The investments in Government securities rose from Rs. 59,000 to Rs. 74,400. The amount of interest paid to the depositors was Rs. 3,47,403, against Rs. 3,10,893. The following table shows the number of Europeans and Eurasians, and Native depositors, including depositors in post-office banks, in the past three years:—

		1883-84.	1884-85.	1885-86.
European and Eurasian depositors	...	5,615	7,218	7,817
Native depositors	...	38,233	50,907	55,986

The classes of persons who deposited money in the district savings banks in the last three years were—

Class		1883-84.	1884-85.	1885-86.
I.—Professional—				
	(a) Having fixed incomes ...	5,025	4,021	1,645
	(b) Having variable incomes...	726	693	327
"	II.—Domestics ...	757	719	278
"	III.—Commercial ...	452	657	262
"	IV.—Agricultural ...	74	66	35
"	V.—Industrial ...	47	67	115
"	VI.—Indefinite ...	2,313	2,779	1,278

The transactions in connection with the investment of depositors' balances in Government promissory notes, inclusive of transactions in the post-office banks during 1885-86, are shown in the following table:—

	Rs.	Rs.
Opening balances with the Comptroller-General	87,800
Amount invested in Government promissory notes ..	2,44,200	
Do. of notes received from depositors for safe custody	43,500	
	<hr/>	<hr/>
		2,87,700
		<hr/>
		3,75,500
Amount of notes returned to the depositors and sold		<hr/>
		2,89,700
		<hr/>
Balance remaining with the Comptroller-General at the end of the year		85,800
		<hr/>

The following figures show the value of notes received into, and issued from, the Bengal Treasuries during the year ended 31st March 1886:—

Transactions with	Receipts. Rs.	Issues. Rs.
Bank of Bengal	15,74,250	56,07,905
Other Treasuries	4,40,050	1,55,91,835
Public in payment of Government dues—		
Rs.		
Home Circle ... 2,34,35,190 }	2,35,08,240	1,06,91,540
Foreign „ ... 73,050 }		
Public in exchange for silver	1,28,64,270	67,19,450
Ditto for notes of other values	8,16,540	8,16,540
Total	3,92,03,350	3,94,27,270
Balances as per Cash Balance Reports ..	42,90,710	40,66,790
	<hr/>	<hr/>
GRAND TOTAL	4,34,94,060	4,34,94,060

The stock of currency notes in the treasuries at the beginning of the year was Rs. 42,90,710, and at the close Rs. 40,66,790. The receipts during the year amounted to Rs. 3,92,03,350 and the issues to Rs. 3,94,27,270, against Rs. 3,68,87,040 receipts and Rs. 3,67,26,935 issues of the previous year, showing an increase of Rs. 23,16,310 and Rs. 27,00,335 respectively.

The remittances made by the Bank of Bengal in notes amounted to Rs. 15,74,250, against Rs. 20,66,050 in the previous year, showing a fall of Rs. 4,91,800. The issues to the Bank of Bengal amounted to Rs. 56,07,905, or Rs. 5,98,915 less than that of the previous year, and they represent collections of the Collectors of Calcutta, 24-Pergunnahs, and Howrah.

The transactions in notes with currency chests amounted to Rs. 6,04,000 during the year, against Rs. 5,07,000 in the preceding year.

Rs.	Rs.	
10,000 ...	1,50,000	
1,000 ...	86,31,000	
500 ...	32,00,000	
100 ...	20,97,000	
50 ...	1,07,250	
20 ...	49,320	
10 ...	7,05,880	
5 ...	77,265	
Foreign Circle ...	84,495	
Total ...	<hr/>	
	1,51,02,210	

The remittance in notes to the Reserve Treasury amounted to Rs. 1,51,02,210, against Rs. 1,26,00,130 of the previous year. These remittances represent surplus collections of high notes in the mofussil treasuries, which accumulate principally during the months the Land Revenue collections are realised.

Notes of the denominations of Rs. 100 and upwards form the principal items of the remittances. In the margin are noted the amounts of each denomination of notes so remitted.

The note transactions with the public are arranged under three heads, viz, —

(a)—In payment of Government dues.

(b)—In exchange for silver.

(c)—In exchange for notes of other values.

Rupees 2,35,08,240 worth of notes were received from the public in payment of Government dues, and Rs. 1,06,91,540 were issued on the same account, against Rs. 2,20,67,490 and Rs. 1,08,09,175 respectively of the foregoing year, showing an increase of Rs. 14,40,750 in the receipts, and a decrease

of Rs. 1,17,635 in the issues of the year under report. Since the year 1880-81 there has been a steady increase in the receipts. As regards the issues the figures have kept over one crore.

The amount of notes received in exchange for silver was Rs. 1,28,61,270 and that issued Rs. 67,19,450. The figures for 1884-85 on this account were Rs. 1,19,67,940 and Rs. 65,41,510 respectively. The causes which led to the decrease in the receipts for the preceding year, as compared with the year 1883-84, having almost wholly disappeared, the receipts of the current year compare favourably with that of the last-mentioned year. The same remark also applies to the issues, which for the year under report differs from that of the year 1884-85 by + Rs. 1,77,940 and of 1883-84 by — Rs. 1,66,475. The receipts and issues under this head fluctuate, and are regulated by the effect of trade in country produce in the several centres of Bengal.

The amount of notes received in exchange for notes of other values was Rs. 8,16,540, against Rs. 5,47,865 in the preceding year, showing an increase of Rs. 2,68,675. Since 1880-81 the transactions under this head have greatly developed; the transactions in the former year were to the extent of Rs. 22,65,735, or less than one-third of the receipts of the year under report.

During the year 1884-85 the net amount of notes received from the public in exchange for silver was Rs. 54,26,430, and in the year under report Rs. 61,44,820, which shows a net increase in the transactions of the latter year of Rs. 7,18,390.

The following statement shows the transactions in currency notes in Bengal during the years 1880-81 to 1885-86 :—

	RECEIPTS.						ISSUES.

* Included under 37—Construction of Railways.

The total *Land Revenue* for 1885-86 amounted to Rs. 3,85,68,000, against Rs. 3,74,20,000 for 1884-85, and the provincial share, including all interprovincial adjustments and adjustments between Imperial and Provincial, aggregated Rs. 1,29,43,650, against Rs. 1,28,31,920. The increase was due to the recovery of arrears of revenue in the Bardwán and Tikári estates. The decrease in the provincial receipts from *Salt* was due to a smaller quantity warehoused in the year, the imports being more speedily taken up. The large increase under *Stamps* was due to the introduction of the Bengal Tenancy Act, the extension of the system of levying copying fees by means of stamps in lieu of cash, and to a large item of receipt on account of probate of a will. The falling off under *Excise* might be ascribed partly to the re-introduction of the sudder distillery system, and partly to the high price of food-grains which prevailed during the year. The increase under *Provincial Rates* was due to recoveries of arrears of cess and to the transfer of the Bardwán and Tikári estates to the management of the Court of Wards. The increase under *Jails* was due to larger sales of jail manufactures. The increase under *Marine* chiefly occurred under "Pilotage receipts," and was owing to a partial revival of trade. The decrease under *Scientific and other Minor Departments* chiefly occurred under "Cinchona plantations" and "Emigration fees." The decrease under the first head was due to large imports of quinine which interfered with the sale of the local febrifuge, while the falling off under the second head must be ascribed to the reduction in the number of emigrants passing through Bengal. The increase under *Stationery and Printing* was due to a large amount of printing work done for Local Funds and Municipalities, to receipts from rent forms introduced under the Bengal Tenancy Act, and to a special receipt of Rs. 27,000 for stationery supplied to the Rajputana-Malwa Railway. The decrease in the receipts under *Miscellaneous* chiefly occurred under "Unclaimed deposits"—an item which is necessarily liable to considerable fluctuations. The fluctuations under other items of 'Civil' expenditure do not call for remarks.

The increase under "State Railways (gross earnings)" was chiefly due to increased receipts from the Northern Bengal and the Dacca-Maimansingh State Railways. The increase under the Dacca-Maimansingh State Railway was due to the opening of the larger portion of the line during 1885-86. The increase under "Irrigation—Major works" almost entirely represented increased collection of water-rates on the Sone Canals, a considerable portion of arrears having been realized. The increase under "Irrigation—Minor works and Navigation" was due to the credit of recoveries of embankment advances under the contract system; the recoveries were in the previous year accounted for under "Civil Buildings and Roads." The decrease under "Civil Buildings and Roads under Public Works officers" was due to a special receipt of 4 lakhs in 1884-85 realized from the East Indian Railway Company for the value of their office in Calcutta. The decrease under "Civil Buildings and Roads under Civil Department" was due to the exclusion of the receipts on account of recoveries of embankment advances from this head. The sum of Rs. 20,000 entered under the head of "Contribution" during 1884-85 represented the special refund of the amount advanced to the Inland Labour Transport Fund in January 1882.

The decrease in expenditure under *Refunds and Drawbacks* was due to a special payment in 1884-85 to the Maharajah of Doonraon on account of land revenue. The increase under *Stamps* was due to the increased issue of stamps and stamped paper from the central store, and under *Excise* to the introduction of the recommendations of the Excise Commission which involved the re-introduction of distilleries with special establishments in many districts. The decrease under *Customs* was due to a special payment in 1884-85 of Rs. 8,000 for the construction of new boats for the Calcutta Customs Patrol and Preventive Service. There has been a steady decrease of expenditure under "Forests," due to the restricted operations of the department in late years. The falling off under *Administration* is accounted for by the appointment of an additional Commissioner in the Patná Division during 1884-85. The increase under *Law and Justice—Judicial Courts* must be ascribed principally to the appointment of additional Judges of the High Court, the formation of additional appellate

benches, and to the appointment of thirteen additional Munsiffs throughout the province. Under *Jails* there has been a larger expenditure on account of district jails. The decrease under *Education* was due to the orders of general retrenchment in expenditure issued in 1885-86; and under *Medical* to the absence of senior officers on leave. The increase under *Scientific and Minor Departments* was for the most part nominal, being due to the transfer to this head of the salaries of officers employed in the Agricultural Department. The increase under "Stationery and Printing" is chiefly perceptible in the sub-head "Government Presses," and this is due to the adjustment for the first time of the profits of printing work done in the Presidency Jail Press to this head by credit to Jail receipts. The increase under *Miscellaneous* was due partly to a special grant to the Calcutta Nurses Institution, and partly to the Local Self-Government and the Cholera Commissions. The large payments in Bhrblúm, Bánkurá, and the Chittagong Hill Tracts led to the increase shown under *Famine Relief*.

The expenditure under "Construction of Railways" in 1884-85 included the charges for the survey of the Behar Assam Railway and the Tírhút Railway Extension, as well as Administrative charges. The administrative charges are now shown under "Miscellaneous Railway expenditure." The increase under "Interest on debt" was due to the progress of capital expenditure on Productive Public Works. The expenditure under the head "Subsidized Companies, land, &c.," represented the amount of compensation paid for lands taken up for the Tárakeswar Railway. The increase under head "Irrigation—Minor works and Navigation" was due to the adjustment of Rs. 2,21,000 on account of arrear charges of the Midnapur tuccavi embankments. The decrease under "Civil Buildings and Roads under the Civil Department" was due to larger payments being made in 1884-85 on account of contributions to the municipalities in Dárjiling, Bardwán, and Chittagong.

The closing balance on the 31st March 1886 was Rs. 14,62,694, against Rs. 12,02,940 the balance on the 31st March 1885.

The following table shows the receipts and expenditure of the Incorporated Local Funds for 1885-86 :—

					Actuals, 1885-86.

Total	6,04,828	5,36,531
Closing balance	2,72,091
GRAND TOTAL	8,08,622	8,08,622

The Cantonment Funds closed the year 1885-86 with a balance of Rs 21,942. During the year under report no troops were stationed at Bhagalpur and Dacca. The Dacca Cantonment Fund was abolished, and the balance

transferred to the Dagshai Cantonment Fund in the Punjab. The account of the Hazáribágh Cantonment Fund was closed, and the balance transferred to the Dinapur Cantonment Fund. Regarding Hospital Port dues, the rate levied on the shipping has for some time been in excess of the requirements, it has, however, recently been reduced from one anna to nine pies per ton. The Bala-sor Port Fund has been in a chronic state of deficit for years in spite of the large annual grants made to it by Government. It has been found impossible to reduce the expenditure of the fund, and the Local Government is still in correspondence with the Chamber of Commerce on the subject of increasing the rate of port dues. Under Cuttack and Purí Port Funds there was a large falling off in the collections during the year, the receipts being Rs. 7,620, against Rs. 14,670 in 1884-85 and Rs. 16,255 in 1883-84. This was probably due to the cyclone of September 1885. Regarding the Bruce Legacy Fund, a scheme has been prepared by the High Court for the establishment and maintenance of the Bruce Institution, and arrangements are being made to give effect to the scheme. The balance at the credit of the Wahabee Fund is Rs. 44,611, and the question of its disposal is under consideration.

No change was made in the rate at which either the Road or Public Works Cess is levied, the maximum rates having been levied in all the districts in which the Cess Act is in force except Bákarganj, where, as hitherto, the road cess was levied at half rates. The statement below compares the results of the year with those of the three preceding years:—

	DEMAND.			BALANCES.			Deduct remissions.	Net arrears.	Percentage of net balance on gross demand.
	Current.	Arrear.	Total.	Current.	Arrear.	Total.			
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
1881-82	70,10,991	11,71,062	81,82,056	9,51,898	1,92,233	11,47,051	10,911	11,36,109	13.8
1882-83	73,10,811	11,42,206	84,53,107	10,06,330	1,77,390	11,86,720	27,940	11,58,780	13.7
1884-85	73,75,697	12,60,372	86,35,969	13,56,778	2,64,196	16,20,974	26,993	15,93,981	18.4
1894-85	74,36,830	15,03,317	90,00,147	11,00,097	3,07,191	14,07,288	38,657	14,28,631	15.8

The current demand of the year rose to Rs. 74,36,830 from Rs. 73,75,697 in 1883-84. This increase is explained to be due to revaluations and the valuation for the first time of rent-free holdings under the provisions of Chapter IV, Part II of the Act. The gross demand, which was Rs. 86,35,969 in the previous year, increased to Rs. 90,00,147. Nevertheless, there was an improvement in the net outstanding balance at the close of the year, which fell from Rs. 15,93,981 to Rs. 14,28,631, representing a reduction from 18.4 to 15.8 in the percentage on the gross demand. The arrear balance, however, rose from Rs. 2,64,196 to Rs. 3,07,191, and this must be regarded as unsatisfactory, although it was partly due to the larger arrears with which the year opened. The percentage of arrear collections on arrear demand rose from 71 to 80. The figures in the last column of the above statement show that the standard of the year was still below that of 1881-82 and 1882-83. This is explained as due partly to the growth of the gross demand, and partly to the distress caused by the floods in many districts. As affecting the question of unrealised balances, it is recognised that the provision of section 45 of the Act, which allows 15 days' grace after the latest date for payment, will always throw the payments due in the last quarter ending on the 28th September into the next year. The results of operations as regards collections between October and the end of December 1885 indicate considerable reductions in outstanding balances.

The following table shows the demand, collection, and arrears of the road and public work cesses on lands and mines for the cess year 1884-85:—

Statement of Demands, Collections, and Balances of Road Cess and Public Works Cess on Lands and Mines for the cess year 1884-85.

The collections are subjected to three tests to measure the success or failure of the year's operations, viz.—(1) comparison of the arrear collections with arrear balances; (2) comparison of current collections with net current demand; and (3) comparison of advance payments with those made in the previous year. In the following districts the arrear collections were less than 90 per cent. of the arrear demand:—

				Percentage of arrear collection on arrear demand.	Percentage of current collection on current demand.
Bardwán	43·	81·9
Murshidábád	59·1	87·9
Húglí	61·3	70·6
Bánkurá	63·5	86·9
Cuttack	69·2	90·6
Balator	69·9	85·7
Durbhanga	70·6	86·9
Faridpur	74·6	63·7
Muzaffarpur	75·6	77·6
Sháhábád	81·2	79·1
Bákarganj	81·3	71·3
Bhagalpur	81·5	91·4
Maldah	85·1	83·4
Patná	86·6	80·3
Monghyr	86·6	87·4
Midnapur	87·1	68·1
Pabná	87·8	90·5
Dacca	89·1	72·1
Nadiyá	89·5	87·2

Of these 19 districts, 16 are the same as those which appeared in the list last year. Chittagong has gone out, and Bákarganj, Maldah, and Pabná have been added. In Pabná, however, the arrears were small and the current collections good, having been 90·5 per cent. on the demand. In the last report it was noticed that collections had been unfavourably affected in the districts of Bardwán and Húglí by the inclusion of three years' arrear demand from petty lakhiraj holdings brought for the first time under assessment under section 70 of the Act. The same cause was at work during the year under review. The arrear collections in Bardwán showed some improvement, having risen from 33·3 to 43 per cent., but in Húglí the percentage fell from 63·4 to 61·3. At the same time, however, there was an improvement in the current collections in both districts. The failure of the Bardwán Raj Estate, which is now under the Court of Wards, to pay in a large sum within the year, is mentioned as a cause of the very unsatisfactory collections in the Bardwán district. In Nadiyá and Pabná also the collections are said to have been affected by the inclusion of the three years' demand. In the former district the inundations, too, appear to have prejudiced the collections, and this cause also operated in Murshidábád. In Maldah and Bánkurá the arrears are explained to be due to the inclusion of demands for rent-free tenures; in the latter district the usual excuse of default on the part of the sirdar ghatwals is also alleged; in Sháhábád, Durbhanga, and Bákarganj arrears are attributed to indifferent harvests; in Balator to confusion in the cess towji accounts, regarding which a special enquiry is being made; and in the remaining districts to delays which are inseparable from the procedure for the realisation of the cesses.

Turning to the second test, viz., comparison of current collections with net current demand, the results were unsatisfactory in the following 26 districts in which the collections fell short of 90 per cent. of the demand, viz.—Faridpur (63·7), Purí (68·), Midnapur (68·1), Húglí (70·6), Bákarganj (71·3), Dacca (72·1), Sarun (74·4), Muzaffarpur (77·6), Sháhábád (79·1), Patná (80·3), Champáran (80·7), Bardwán (81·9), Jessor (82·6), Maldah (83·4), Tipperah (84·3), Rájsháhyí (84·4), Gayá (84·6), Bírghúm (85·1), Balator (85·7), Chittagong (86·8), Bánkura (86·9), Durbhanga (86·9), Nadiyá (87·2), Monghyr (87·4), Murshidábád (87·9), and Khulna (88·4). No explanation has been given of the unfavourable results in these districts, except Midnapur, Bardwán, and Húglí. In the Patná and Dacca Divisions (except Maimansingh), and in Purí collections were exceptionally bad; and

in the majority of these districts but little had been done by the 31st December 1885 to clear off the outstandings. There were 12 districts against 11 in 1883-84, in which the percentage on both the current and arrear demand exceeded 90 per cent. Rájsháhí and Pabná have fallen out of the list this year, while Dinagepur, 24-Pergunnahs, and Rungpur have been added to it. The 12 districts are Purneah, Dárjiling, Hazáribágh, Noakhally, Dinagepur, 24-Pergunnahs, Jalpáigurí, Bogra, Maimansingh, Mánbhúm, Lohárdagá, and Rungpur. In the remaining three districts—Pabná, Bhagalpur, and Cuttack—the percentage on the current demand rose slightly above 90 per cent., but the arrear collections fell below that standard.

The advance collections made during the year amounted to Rs. 1,40,565, against Rs. 1,33,128 in 1883-84. The districts in which these collections exceeded Rs. 5,000 are Húglí (Rs. 5,372), Dacca (Rs. 6,095), Maimansingh (Rs. 6,346), Gayá (Rs. 6,527), Cuttack (Rs. 6,691), Muzaffarpur (Rs. 7,298), Patná (Rs. 7,928), Bardwán (Rs. 9,168), Bhagalpur (Rs. 16,239), and Durbhanga (Rs. 31,638).

There was a slight increase in the number of certificates filed during the year under the Public Demands Recovery Act. From 74,674 in the previous year the number rose to 77,631, which, with the 39,147 pending at the close of that year, gave a total of 116,778 for disposal, against 112,533 in 1883-84. Of these, 78,385 were disposed of during the year, leaving 38,393 pending at its close. Except in the districts of Húglí, Sháhábád, Durbhanga, and Purí, the number of disposals kept pace fairly with the number of institutions. Out of the total number of 78,385 certificates disposed of during the year, payment was made in 31,844 cases on the mere issue of notice, in 8,577 cases on the attachment of moveable property, and in 26,900 cases on the attachment of immoveable property. Of the remainder, 2,806 were struck off and 672 cancelled on objection, leaving 7,586 cases which were discharged without resort to issue of notices or attachment of property. It is reported that the sale of moveable or immoveable property was resorted to only in 426 cases. The total number of objections filed against certificates was 4,171, of which 3,906 were disposed of. In 672 cases the certificates objected to were, as already stated, cancelled, and in 426 cases the amount certified was reduced. The smallest number of certificates was filed in the Chutiá Nágpur Division, viz., 559; Rájsháhí came next and then the Presidency Division—3,601 having been filed in the former and 1,489 in the latter. The three Divisions in which the largest numbers were filed were Patná (28,232), Bardwán (14,857,) and Dacca (9,914).

Complete revaluations are in progress in the districts of Cuttack, Purí, and Balasor; and sanction has been accorded to the commencement of complete revaluations in Gayá and Champáran. In Midnapur both valuation for the first time of certain estates and tenures, and revaluation of others, were made. The revaluations have resulted in a decrease of Rs. 14,623; while the valuations for the first time gave an increase of Rs. 11,233. The net decrease of Rs. 2,790 is attributed to the low price of paddy and to the exclusion of certain lakhiraj lands which were twice assessed at the first valuation. The result of partial revaluation in Pabná was an increase in valuation of Rs. 17,033, and of Rs. 803 in the cess demand. In Chittagong 630 taluks were assessed for the first time, and with other revaluations, yielded a net increase of Rs. 4,464 in the cess demand. The revision of the revaluations of the Mánbhúm district has been completed. The total valuation of the district now stands at Rs. 13,60,921, against the original valuation of Rs. 9,97,170. The valuation of pergunnah Dhalbhúm, in the Singbhúm district, has been completed; but the completion report had not been received by the Board when their report was submitted. There were no summary valuations in Pabná and Mánbhúm. In Midnapur summary valuation was resorted to only in the case of 24 petty estates; and in the Chittagong district, all the estates being of a petty character, 7,446 estates were summarily valued.

The provisions of Chapter VI, Part II of the Cess Act, for the valuation of rent-free holdings, were on the recommendations of Commissioners extended during the year to all districts. The result generally may be said to have been unimportant.

During the year 5,704 separate accounts were opened, under section 44 of the Act, for Rs. 88,468 payable as cess. The division in which the largest

number occurs is Dacca (1,972), while in the Chutiá Nágpur Division no accounts at all were opened. In the Dacca district alone 1,568 accounts were opened. At the close of the year the number of accounts remaining open was 25,837 for Rs. 12,27,651 of cess. Fifty-seven separate cess accounts were opened in revenue-free estates under section 46 of the Act—the largest number, 13, being in the Monghyr district.

Land Revenue.

THE number of estates paying revenue or rent to Government, and their classification, are shown in the following table:—

				Class I, permanently- settled estates.	Class II, temporarily- settled estates.	Class III, Government estates.	Class IV, ryotwari tracts.	Total.
1884-85	145,457	7,691	2,913	26	156,087
1885-86	147,008	7,764	2,950	24	157,746
Increase or decrease in 1885-86				+1,551	+73	+37	—2	+1,659

The increase in the number of estates is normal, and is due to the usual causes—to partitions, to the settlement of new alluvial accretions, and to purchase by Government in default of private bidders at sales for arrears of revenue. The reduction under the head of ryotwari tracts is the result of re-classification.

The current demand in respect of each class of estates is compared below with that of the year 1884-85:—

				1884-85, Rs.	1885-86, Rs.
Class	I	3,22,98,211	3,22,99,680
"	II	27,11,757	27,11,912
"	III	21,21,585	21,97,139
"	IV	8,53,133	8,21,318
Total				3,79,87,686	3,80,33,379

The increase of the year was only Rs. 45,693, against Rs. 47,779 in 1884-85 and Rs. 77,962 in 1883-84. In former years the annual addition to this branch of the revenue amounted to about a lakh and a half of rupees, and the diminution in the rate of development is attributed to the greater moderation shown at present in enhancing rents, and the greater readiness to reduce them where found excessive—the result, no doubt, of the long discussions of the subject during the consideration of the new Bengal Tenancy Act.

The following statement shows the collections, remissions and balances of the year as compared with those of 1884-85:—

		DEMANDS.			Remissions.	Net de- mand after remissions.	Collections.	Balances.	Percentage of collec- tions to current demand.	Percentage of collec- tions to total demand.
		Current.	Arrear.	Total.						
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.		
1884-85	..	3,79,87,686	22,00,716	4,01,88,402	1,24,977	4,00,63,425	3,71,37,718	29,25,677	97.76	92.41
1885-86	..	3,80,33,379	30,13,936	4,10,47,315	2,00,005	4,08,47,310	3,83,91,124	24,55,886	100.04	94.53

The remissions were considerable, amounting to Rs. 2,00,005, against Rs. 1,24,977 in 1884-85 and Rs. 1,03,580 in 1883-84. They are classified as follows:—

		1883-84,	1884-85,	1885-86,
		Rs.	Rs.	Rs.
Nominal remission	30,475	25,065
Remission of grace	33,538	38,072
Ditto of right	39,567	61,810

Nominal remissions and remissions of right are frequently connected with original errors in the statement of demand, such as double assessments, or failure to enter at once reductions ordered by competent authority. The largest remissions of grace occurred in the following districts:—

						Rs.
Gayá	13,327
Jalpáiguri	8,010
Húgli	7,119
Midnapur	6,947
Cuttack	5,201
Bákarganj	4,325

In Gayá the remission was allowed on account of failure of crops; in Jalpáiguri on account of death, desertion, and insolvency of ryots; in Húgli on account of the loss of crops by flood. In Midnapur Rs. 3,737 were written off on account of death and desertion of ryots and the insolvency of farmers, and Rs. 3,016 on account of the adjustment of jungle jumma due from the aymadars of estate Bulrampur. The causes of remission in Cuttack were relinquishment of lands by the ryots after the storm-wave of 22nd September 1885, loss of crops by flood in Banki, and reduction of rents of some poor ryots in the Cuttack town khas mehal. The remissions in Bákarganj were rendered necessary by diluvion and the insolvency of farmers.

The outstanding balances of the four classes are compared below with those of 1884-85:—

				1884-85.	1885-86.
				Rs.	Rs.
Class I	14,07,616	9,03,603
" II	4,71,924	5,10,711
" III	9,19,706	9,59,385
" IV	1,26,431	82,187
Total	29,25,677	24,55,886

The comparison shows a decrease of Rs. 4,69,791, and by taking the corrected figures for 1884-85, viz., Rs. 30,13,936, the decrease becomes Rs. 5,58,050. This improvement was due to the payment of revenue by the Bardwán estate. The amount left unpaid on account of the death of the late Maharajah of Bardwán was eight lakhs of rupees, so that, allowing for this temporary and exceptional default, the year under report compares unfavourably with 1884-85. The result of a comparison with previous years is still less satisfactory. The total amount due from wards' estates at the close of the year was Rs. 1,52,659, against Rs. 46,899 in 1884-85 and Rs. 25,847 in 1883-84. The collections on temporarily-settled and Government estates were also unsatisfactory. (The collection of revenues of Government estates is noticed in a separate section.) On the other hand, there was an improvement as to ryotwari tracts, where the collections exceeded the current demand, and the balances were reduced from Rs. 1,17,701 to Rs. 82,187. In the districts of 24 Pergunnahs, Dárjiling, and Singbhúm more than 99 per cent. of heavy gross demands was collected.

At the commencement of the year the initial work of registration under Act VII (B.C.) of 1876 had been completed in 34 out of 43 districts. Completion reports were received during the year from Húgli and Midnapur, leaving seven districts in which the operations are still pending. It is only in Cuttack that the work remaining to be done is considerable. The mutations registered, which were during the year 3·5 per cent. of the initial registrations, were not considered to fairly represent the number of changes in title which occur, and the question whether judicial or executive action should be taken to ensure a more complete record of such transactions is at present under consideration.

The number of estates which became liable to sale during the year on account of default in paying the revenue was 12,445; that of estates actually sold 1,770. The sales were not so numerous as in the three preceding years. The number of estates

bought in by Government at nominal prices was 143, and these were presumably let go to sale because, owing to dilavion and other causes, they could no longer bear the revenue assessed. The Sale Laws were worked generally with moderation and leniency.

Working of Public Demands Recovery Act, VII (B.C.) of 1880.

The following statement shows the number and nature of certificates in force during the year:—

	Number pending from last year.	Number filed during the year.	Total.	Disposed of during the year.	PENDING—		
					More than six months.	Less than six months.	Total.
Demands of all kinds under section 5 ...	1,458	2,400	3,867	2,837	397	633	1,03
Arrears of rent due to Government, clause 6, section 7 ...	19,108	37,406	56,604	33,978	12,257	10,369	22,626
Embarkment dues, section 50, Act VI (B.C.) of 1873 ...	6,180	7,320	13,510	9,124	484	3,902	4,386
Water-rates, Act III (B.C.) of 1876 ...	33,816	45,358	79,244	49,865	12,804	25,181	38,379
Cesses, Act IX (B.C.) of 1880 ...	34,933	76,869	111,802	77,143	9,914	24,715	34,639
Demands of the Court of Wards, clause 7, section 7 ...	6,221	8,594	14,815	9,169	3,416	1,900	5,346
All other certificates under section 7 ...	13,633	21,166	34,799	21,659	4,822	8,318	13,140
Total ...	115,379	199,262	314,641	195,075	44,248	75,318	119,566

The number of certificates filed during the year was thus 199,262, against 173,474 in 1884-85 and 220,003 in 1883-84. There was a considerable increase in the issue of certificates for the realization of water-rates. The number of cases in which it was necessary actually to sell property for the realization of demands diminished from 8,599 in the preceding year to 6,284 in 1885-86.

Miscellaneous proceedings.

Rs. 1,91,451, against Rs. 2,51,827 in 1884-85, the decrease being due to the introduction of a new rule under which searching and copying fees are realized in stamps instead of in cash. Thirteen Government estates, with an area of 572 acres, were sold, subject to an annual revenue of Rs. 1,296, for the total price of Rs. 3,768. During the year 526 partitions were effected, against 502 in the preceding year, and it is stated that work of this class is increasing. The Government revenue was redeemed in respect of 226 estates with an annual demand of Rs. 251, the price realized being Rs. 9,269. Two hundred and forty-six leases were granted of waste land, including 17,369 acres, at an immediate rent of Rs. 923.

The statement given below shows the area of the land acquired for public purposes during the year, its distribution and cost:—

Land Acquisition.

	Area of land acquired.			Revenue abated.			Cash compensation paid and other charges.		
	A.	R.	P.	Rs.	A.	P.	Rs.	A.	P.
Government ...	235	2	10	11	13	11	38,661	4	6
Irrigation ...	904	0	6	119	15	1	1,71,258	15	7
Municipalities ...	25	3	33	36	8	2	4,57,815	11	6
Railways ...	1,616	1	16	1,419	7	4	4,13,929	0	9
District Road Committees ...	418	0	0	32	12	10	52,256	12	3
Chowkidars' jagir lands ...	33	0	2	7	1	7	3,039	4	5
Land for Port Commissioners ...	0	0	3			5,712	8	0
Total ...	3,262	3	30	1,627	10	11	11,42,697	8	11

In these proceedings are included several important projects, such as the improvement of the Jorebagan bustee, the widening of a portion of the Chitpur road the acquisition of the land for the Kidderpur Docks, a large drainage scheme in the Húglí district, besides several extensions in railways.

WORKING OF THE BENGAL TENANCY ACT.

Act VIII of 1885 came into operation on the 1st November 1885, and was therefore in force during five months of the official year. The statement

given below shows the action taken under its different sections in revenue offices :—

1	2	3	4	5	6	7	8	9	10		
DIVISIONS.	TRANSFER OF TENURES.										
	(a) Voluntary, section 12 (3).	(b) By direct sale, sections 13 (2), 14.	(c) By succession, section 15.	Commutation of rent payable in kind, section 40.	Appraising of produce, where rent is paid in kind, sections 63 and 70.	Registration of im- provements, section 80.	Certificates of Collectors as to acquisition of land for building or other purposes, section 84.	Notices of resumption of land by landlords, section 87 (2). The work done relates principally to the issue of notices and payment of landlords' fees on transfer of tenures under sections 12 to 15 of this Act.

Since the close of the year rules have been sanctioned for the guidance of the Registration Department in registering such transfers. The registering officer is required to certify that the document is admissible, and it will be his duty to refuse to give this certificate unless the transfer purports upon the face of the document to be a transfer of a permanent tenure or of a ryoti holding at a fixed rate.

A petition has been addressed to Government on the subject of the working of section 12, which provides that ryots holding at a rent fixed in perpetuity must give notice, and pay a fee to their landlords, through the Collector, on transferring their holdings. It is alleged that ryots not holding at fixed rates adopt the prescribed procedure, thereby creating evidence which in future may be accepted as proof that they really occupy the privileged position which they claim. In so far as the action taken by such ryots is the result of misapprehension as to the meaning of the law it is met by the registration rules cited above. But where the parties to the sale of a holding seriously assert that it is alienable and privileged for ever against an increase of rent, while the zemindar denies that it is of this character, it does not seem undesirable that the issue should be distinctly raised at the time when the transfer takes place. The new law has not conferred any right of sale, but has merely provided that, when transfers occur, they should be duly registered and notice given to the zemindar. If the latter denies the right of transfer, he can refuse to acknowledge the new tenant. If, while admitting the transfer, he merely denies that the holding is held at fixed rates, he can protect himself against the notice and his acceptance of it, with the fee, being used in evidence against him by filing objections. Even if he declines to accept the fee, he is not in a worse position than under the old law, which did not require that a fee should be offered.

The cases connected with the appraisement of produce occur principally in the Patná Division. The working of these sections in the district of Gayá, where so much land is held on the system of produce rent, is reported to have been, so far, satisfactory to both landlords and tenants, and as likely to prove most beneficial.

Of the four applications for survey and record of rights, one referred to a Government estate, one was refused, and two were pending at the close of the year. The other proceedings entered in the table were of minor importance.

This subject has been noticed under the head "Survey."

The provisions of the Bengal Tenancy Act on the subject of receipts for rent have produced a very immediate and striking effect, and give matter for comment in every part of the Province. The earlier reports of Collectors everywhere give prominence to the difficulties which had arisen. Under the former law, section 11 of

Bengal Act VIII of 1869, every cultivator to whom a receipt, specifying the year on account of which he might have made a payment of rent, was not given, was entitled to recover damages not exceeding double the amount paid. In fact, however, the year was not specified in receipts, and the remedy by a suit for damages proved illusory. The matter was of the most serious importance, inasmuch as the worst agrarian disputes in Bengal arose from the practice of making false rent-rolls showing rates in excess of those due, payments on account of the current demand being credited, without the knowledge of the tenants, to imaginary arrears of past years at the increased rate. The ryots had no means of checking these fraudulent proceedings, inasmuch as the receipts they received showed merely the sums paid, without specification of the year to the demand for which they were credited, and even the Courts found the greatest difficulty in deciding whether accounts produced before them as the sole evidence of the existence of an alleged arrear were genuine, or concocted in the manner indicated above for the purpose of being used as false evidence. To check this abuse, which was widespread and most dangerous, it is provided in the Bengal Tenancy Act that rent receipts shall contain certain particulars as to the holding and the demand for which the money is paid, so far as they can be specified at the time by the landlord; and it is further enacted, as a self-acting sanction to the above rule, that if a receipt does not contain substantially the particulars required, it shall be presumed, until the contrary is proved, to be an acquittance in full of all demands up to date. That a change affecting every payment of rent throughout the province, and tending to bring old disputes to a head, would cause much temporary trouble and inconvenience was obvious; but it was believed that it was nevertheless desirable to take the precautions necessary to prevent the constant forgeries, false evidence, and riots clearly traceable to the evasion of the old law, as also to put a stop to a system by which the ryots as a body were being by degrees defrauded of their privileges in the matter of rent rates.

That an appreciable effect has already been produced appears from the fact that, during five months, 7,473,311 of the specimen forms of receipt were sold. In addition to these, forms are printed at private presses, those supplied by Government having purposely been disposed of at a price which permits of their being undersold.

The first introduction of the new forms into use was impeded by a curious misapprehension. The words "particulars of the holding" being used as a general heading in the form, it was supposed by the ryots in many districts that the specific designation of their status should be given, and many refused to pay rent, as their demand to be entered as belonging to some privileged class was not complied with. Instructions were promptly issued by Government for the correction of this error by the explanations of local officers. On most estates, when this preliminary difficulty was got over, the new system worked smoothly.

In some places there has been a dispute as to the entries to be made against the headings as to the area of holdings—a matter generally settled by leaving the column blank. This course is legal and correct where, as generally happens, the landlord does not really know what the precise area is. There remain the cases which the law was designed to meet, those in which the landlord has been keeping his accounts so as to show a higher rent than that which is authorised by law, or acknowledged by the ryots; those in which illegal cesses have been collected; and those where, through the former neglect of zemindars to grant receipts and pattahs, everything is in confusion, and the real rent has never been ascertained. Where neither will trust the other, and where the character of the holding, the quantity of land, and the amount of rent, are all in dispute, there seems no way of settling matters but by the arbitrament of the Civil Court, or by the operation of the Revenue authorities under the Tenancy Act. On such estates the first effect of the new law may be to increase contention, with the ultimate result of producing a satisfactory settlement. Even in these instances, it may be remarked, what brings matters to an issue is merely the insistence on the discharge of an obligation which existed under the old law, and has always been considered necessary in Bengal—the entry in the receipts of the period in respect of which rent is paid. This is a necessary form of honesty and fair dealing, insisted on in business of every kind, and if

its observance in transactions between Bengal zemindars and their ryots causes friction, that is the best proof that the precaution is necessary either to clear up uncertainty, or to prevent fraud.

On the whole, as far as can be judged from the experience of the few months which have elapsed since the Act came into operation, the working of the new law is not likely to be attended by any such disturbance of the relations between landlords and tenants as was apprehended by some of those who were opposed to the introduction of the measure. The difficulties hitherto experienced have mostly been confined to questions connected with the new forms of receipt, and with the notices of transfers. There is no doubt that, upon both these points, the difficulties will prove to be merely of a temporary nature. It is satisfactory to find that the other provisions of the Act appear to be working smoothly, that recourse is being had to the sections relating to the appraisement of produce rents, and to the registration of improvements, and that some applications have been received for the settlement of rents. At present, however, there are no materials for forming an opinion on the operation of some important sections of the law, among which may be mentioned the publication of price-lists, the sale of tenures subject to encumbrances, and the modified procedure for distraint. The most important results of the Act are such as do not admit of being numbered or tabulated. The real benefits of such a measure as the Tenancy Act are to be looked for, not in the number of cases in which application may be made to the courts to enforce its provisions, but in the peaceful acceptance by all classes of the principles which underlie it, that the landlord is to be secured in the enjoyment of his fair rent, and that the tenant is to be maintained in the possession of his rightful holding.

Sources of Revenue other than Land.

CUSTOMS.

THE subjoined statement shows the gross and net Customs duty collected in Bengal during the past five years:—

	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	Rs.	Rs.	Rs.	Rs.	Rs.
Import duty (excluding duty on salt)	61,72,991	14,87,018	15,13,590	13,25,339	13,99,392
Ditto on salt ...	2,37 15,928	1,74,72,613	1,73,13,587	1,91,86,114	1,80,35,154
Export duty ...	20,16,899	21,28,192	19,92,100	16,24,288	18,10,621
Total gross duty ...	2,19,35,818	2,10,88,123	2,08,19,277	2,21,35,711	2,12,15,167
Refunds and drawbacks—					
Imports ...	3,04,123	3,29,636	2,10,991	2,43,338	2,29,064
Exports ...	1,05,519	1,16,840	1,20,921	84,539	62,202
Total ...	4,09,975	4,37,176	3,31,912	3,27,877	2,91,266
Total net duty	3,15,25,813	2,96,50,617	2,04,87,365	2,18,07,864	2,09,53,901

In the year 1884-85 there was an increase of Rs. 13,20,499, or 6·4 per cent., in the net receipts as compared with the year 1883-84, owing entirely to larger clearances of salt; but in the year under report a decrease of Rs. 8,53,963, or 3·9 per cent., took place in consequence of the decline of 11½ lakhs of rupees in the duty from salt. Import duty, exclusive of salt, shows an improvement of Rs. 62,316, or 4·8 per cent., due to the larger collections on imported ale, beer, porter, and spirits. The rise in the export duty of Rs. 2,08,670, or 13·5 per cent., is attributable to the recovery of the rice trade from the previous depression. The net receipts of all the ports taken together show a decrease of Rs. 8,79,383, or 4·1 per cent., to which Calcutta has contributed more than half, and Chittagong and Purí in smaller proportions. The ports of Balasor, Cuttack, and Naráinganj show, on the other hand, an improvement in the net revenue.

Exclusive of Government transactions, the total value of the imports into Bengal, under foreign trade shows a falling off from Rs. 30,28,51,914 in 1884-85 to Rs. 27,87,05,795 in the year under report. The decline was most marked in foreign merchandise, where it exceeded 1 crore and 44 lakhs. In the coasting trade the imports of merchandise fell by more than 48 lakhs.

The exports of the year had a total value of Rs. 40,85,10,234, against Rs. 39,92,99,926 in the year 1884-85. In the foreign trade, exports rose in value from Rs. 33,13,32,666 to Rs. 33,21,15,247, representing an increase in the value of merchandise of Rs. 27,99,468, and a decrease in treasure amounting to Rs. 20,16,887. In the coasting trade exports of merchandise fell from Rs. 6,14,54,993 to Rs. 6,07,16,194. Exports of treasure, however, show a rise from Rs. 65,12,267 to Rs. 1,56,78,793, owing to a heavy despatch of silver to British Burmah.

OPIUM.

The year 1884-85 was one of deficient rainfall in all the districts included in the Behar Agency, except Champaran. It is mentioned that blight, caused by damp east winds with cloudy days in February, did harm to the poppy crop on the north of the Ganges, more particularly in the Aliganj Division. Blight appeared, too, in some places in the South Ganges districts, but did not spread, and is said to have been invariably checked by a west wind. In the Benares Agency the season was favourable. The abundant rainfall of the monsoon was followed by fine weather in November and December, and then by heavy showers in January, which did much good to the later sowings and brought the crop fast to maturity. Unseasonably heavy rain in March caused some anxiety, but beyond reducing the consistence of the drug with a large admixture of *pasewa*, caused no injury to the outturn.

The Opium Department made engagements for cultivation during the year with 25,263 *khattadars* and 665,353 cultivators in the Behar Agency, with 30,194 *lumbardars* and 713,973 cultivators in Benares; thus giving employment of a remunerative nature to 1,434,783 persons.

The areas of the land engaged for, of that sown with poppy-seed, and of that actually cultivated with the outturns in each Agency during the last five years are compared in the following statement:—

SEASON.				Area engaged for.	Land sown for cultivation.	Net cultivation.	Produce at 702 consistence.		
BEHAR.				Bighas.	Bighas.	Bighas.	Mds.	s.	c.
1880-81	465,094	458,894	434,786	49,292	6	6½
1881-82	477,619	475,459	460,382	49,440	4	1
1882-83	463,827	466,772	394,232	27,073	34	5½
1883-84	416,988	419,259	399,518	59,560	15	4
1884-85	442,326	415,627	433,201	55,802	7	8½
Increase of 1881-85 over 1883-84				26,368	33,683		
Decrease of 1884-85 below 1883-84				4,662	3,758	7	11½
BENARES.									
1880-81	481,882	432,113	423,265	45,475	37	0½
1881-82	450,474	398,478	389,659	51,419	7	2
1882-83	428,541	412,624	398,952	42,213	5	10½
1883-84	431,367	414,927	409,831	67,037	12	9½
1884-85	460,218	475,195	471,232	78,001	28	2½
Increase of 1884-85 over 1883-84				28,851	60,268	61,401	10,964	15	9½

Taking the results obtained in the two Agencies together, and comparing them with those of the previous year, there was an increase of 24,189 bighas in the area engaged for, of 86,636 bighas in the land sown, of 95,084 in the net cultivation or the area on which the seed germinated, and of 7,206 maunds in the produce. The net cultivation and the produce were larger than those of any previous year. The exceptional success of the season's operations must be mainly attributed to the Benares Agency, where there was an increase of 28,851 bighas in the area engaged for, of 60,268 bighas in the land sown, of 61,401 in the net cultivation, and of 10,964 maunds in the produce. The area sown proved to be 14,977 bighas in excess of that for which settlements were made, leaving no doubt as to the popularity which the excellent outturn of the year 1883-84 had secured for the cultivation. In Behar there was an increase of 26,368 bighas in the land cultivated, accompanied by a slight falling off of 4,642 bighas in that for which engagements were made. The area cultivated increased in every division of the Behar Agency, except Hajipur.

As noticed by the Opium Commission, complaints of the prospects of the Opium Department being injuriously affected by the competition of other agricultural industries have been frequently made by the Behar Agent. The

Commission arrived at the conclusion that the only crops which seriously competed with poppy were potatoes, sugarcane, and tobacco, of which the two latter were less profitable than opium, while potatoes commanded only a small market; so that there was really no cause for alarm. The figures of the season under report certainly offer no support to the statement that in the three thickly populated districts of Tirhút, Hajipur, and Chuprah the cultivation of the poppy is less sought after every year, as it appears that 60,227 bighas were cultivated with poppy in these districts during 1884-85, against 58,487 bighas in 1883-84, showing an actual increase of 1,740 bighas. There was a decrease in Hajipur, but as it was local and exceptional, it cannot be accounted for by causes of general application.

The total produce of the year 1884-85 in the two Agencies, as shown in the statement above, amounted to 1,33,803 maunds of opium at 70° consistence, which appears to be the largest outturn ever obtained in any year. The outturn of the Behar Agency was somewhat less than that of the preceding year, but in the Benares Agency the produce greatly exceeded that of any former year; only in three previous years (1875-76, 1876-77, and 1883-84) has the outturn of the last-named Agency exceeded 60,000 maunds. The average yield per bigha in 1884-85 was 5 seers $2\frac{1}{4}$ chittacks in the Behar Agency, and 6 seers 9 chittacks in the Benares Agency—averages for both Agencies rather in excess of ordinary years. The produce shown as that of the Behar Agency includes 689 maunds grown in Nepal and delivered to the officers of the Opium Department at Motihárf and Bettia. This is the largest quantity which has yet been received in any year from Nepal cultivators; and the result may be due in part to the freedom of the Nepali ryots from police molestation and the better arrangements made for them. The extension of these ready-money dealings with the Nepal cultivators shows that opium cultivation is not altogether dependent on a system of advances.

The difference in the consistence of the opium delivered in the two Agencies in the year under review is remarkable. In the Behar Agency the actual produce, as delivered by the cultivators, weighed 52,333 maunds, but on account of its high standard of consistence this amount, after deductions for impurities, is reckoned for purposes of manufacture at 55,232 maunds *dumdetta*, i.e., reduced to the standard consistence of 70°. The cultivators got the benefit of this high consistence by premiums paid in excess of the standard price of Rs. 5 per seer paid on the weight delivered. Deductions for low consistence were made in this Agency on 100 maunds only. In the Benares Agency, on the other hand, the actual produce delivered by the cultivators amounted to 80,468 maunds; but on account of the unusually low consistence of the opium, the *dumdetta* result amounted only to 78,001 maunds.

The unusual quantity of *pasewa* present in the opium of this Agency during the year is ascribed to the heavy rain of March 1885. It is, however, clear that the custom of separating *pasewa* from the raw drug obtains much more largely among the cultivators of Behar, who delivered 538 maunds of pure *pasewa* at the weighments of the year, than among the cultivators of the Benares Agency, who delivered 140 maunds only of pure *pasewa*. Instructions have been issued to ensure a more complete separation of *pasewa* in future weighments in Benares. In the Behar Agency 27½ maunds, and in the Benares Agency 36 maunds of opium were confiscated for adulteration, and in the Benares Agency fines were imposed in respect to 118 maunds of opium for impurities other than *pasewa*. In the Behar Agency deductions for "impurities, *pasewa*, &c.," were made on 236 maunds. Large adulterations were found in some of the deliveries of Nepal opium.

The balance of advances made for cultivation outstanding was, at the end of the year 1884-85, Rs. 4,016 in Behar and Rs. 22,737 in the Benares Agency, making a total of Rs. 26,753. These sums are relatively small, the advances made to cultivators having amounted in the year under review alone to one hundred and fifty-six lakhs of rupees in the Benares Agency, and to one hundred and eleven lakhs of rupees in the Behar Agency. The policy of recovering the old balances has been successful, and the ryots enter on the new year unembarrassed by outstanding accounts.

The unirrigated portion of the area under poppy cultivation is less than a fourth of the whole in Behar, while in the Benares Agency it amounts only

to 2 per cent. During the year under review Rs. 1,11,100 were lent in Behar and Rs. 26,961 in the Benares Agency for the construction and repairs of wells. In the former Agency an increase of cultivation of 1,029 bigahs was obtained by these advances. The abundant rainfall in the last-named Agency made it less necessary than in ordinary years for the cultivators to spend money on wells. Particulars of recoveries of the advances made for wells in Behar have not been received; in the Benares Agency Rs. 8,831 of the amount advanced had been recovered up to 30th November 1885, and the balance was in course of realization. In some districts of Behar wooden aqueducts or shoots have been constructed which convey water from the ryots' wells across the canal distributaries to the poppy fields. A further expenditure was incurred on this account during the year under review in the Patna district. The proposed scheme of damming up hill-streams in certain districts with a view to distributing their water by means of small channels, and the effect of growing indigo and poppy on the same land, have been referred to the Director of the Agricultural Department for consideration.

During the year under review 1,284 cases were instituted in the Lower Provinces for offences against the Opium law, 1,048 persons were convicted, and sums exceeding in the aggregate Rs. 13,000 realized as fines were distributed among informers and other persons as rewards. In the majority of cases the accused persons were convicted for keeping back a small quantity of the produce of their fields, which they were induced to sell to the informers. Some large seizures of contraband opium were made in railway carriages near Bardwán, but the persons found in possession were merely coolies hired to take charge of it, and the real consignors were not discovered. In the North-Western Provinces and Oudh 644 prosecutions were instituted, of which 584 resulted in the conviction of the accused. In the successful cases fines were realised to the amount of Rs. 7,663, the greater portion of which was distributed in rewards to informers and apprehenders. No great success was obtained against the chief culprits—the dealers—although some large captures were made in the Bareilly district. The good opium crops of two successive seasons afforded considerable facilities for the consumption of illicit opium, as the cultivators can more easily keep back without detection a portion of the drug when the supply is abundant. The Agents recognise the importance of confining within the narrowest possible limits the demoralising traffic in illicit opium, and the impossibility of producing any diminution of the offence by petty prosecutions directed against cultivators, as long as the purchasers and dealers escape detection. The subject is receiving the closest attention from departmental officers, and also from the police.

The following particulars relate to the manufacture of opium during the season from 1st April to 31st October 1885. The Behar Agent had a balance in store on the 1st April 1885 of opium of the previous season, amounting to 1,554 maunds of 75° consistence. The opium delivered in his Agency by cultivators (including Nepal opium) on account of the crop of 1884-85 amounted to 52,302 maunds of the same consistence. Deliveries from the Benares Agency made up 13,124 maunds, and miscellaneous receipts and the godown surplus raised the whole amount in store during the year to 67,227 maunds of 75°. From the total quantity of opium at his disposal, the Agent manufactured 1,297,220 cakes, or 32,430½ chests, which are equivalent to 47,876 maunds, at 75° consistence, of provision opium, and 1,414 chests equal to 2,122 maunds of excise opium. On the 1st November 1885 the Agent had a balance of 9,333 maunds of opium, including 140 chests of excise opium (1,274 of the 1,414 chests of excise opium manufactured were issued between April and October 1885); the rest of the opium received is accounted for by expenditure on *lewa*, and issues of medical and miscellaneous opium. The Benares Agent had in store on the 1st April 1885 a balance of 2,679 maunds of opium of 70° consistence. The receipts of the season of 1884-85, excluding Malwa opium, but including miscellaneous receipts and godown surplus, made the total up to 81,358 maunds at 70° consistence. From the total quantity of opium at his disposal the Agent manufactured 1,300,000 cakes, or 32,500 chests, which are equivalent to 47,740 maunds, at 70° consistence, of provision opium. 14,050 maunds at 70° consistence (shown above as 13,124 maunds at 75° consistence) were sent to the Behar Agency, 10,558 maunds were kept

in reserve, and the rest is accounted for by expenditure on *lowa*, and on repairs of cakes, and by issues to Calcutta. The Agent of Benares also manufactured 1,609 maunds of excise opium from the balance of Benares opium remaining over from the season of 1883-84. The manufacture of Malwa opium during the season 1884-85 is noticed below.

Information regarding the total issues of Behar opium for excise purposes during the year was not received from the Agent. In the Benares Agency the amount of opium issued for excise purposes in the year was 6,508 maunds as against 5,381 maunds in the preceding year. This amount apparently includes issues of Malwa opium. The experimental purchases of Malwa opium for excise purposes have been continued. During the season of 1884-85, Malwa opium to the amount of 2,630 maunds at 90° consistence (=3,382 maunds at 70° consistence) was purchased by Mr. Hastings, Sub-Deputy Opium Agent, who was deputed to Indore for the purpose. This amount, added to 573 maunds in store from preceding years, made up a total of 3,203 maunds in store during the year. Of this amount 706 maunds were issued as excise opium to the North-West Provinces and Oudh and the Central Provinces, and the remainder (1,180 maunds manufactured and 1,312 maunds unmanufactured) was in store at the end of the season. This opium is said to be generally appreciated in the Central Provinces; but it is not popular in the North-West Provinces.

The outturn of the saw-mill at Bankipur was less in quantity than in preceding years on account of the temporary cessation of work for the erection of new machinery. This was successfully carried out by Mr. Girling, the Superintendent, and the Agency now possesses plant sufficient to turn out a much larger quantity of work. The supply of timber through the contractors, Messrs. Dear & Co. and Messrs. Alexander Knight & Co., has been regular and in excess of requirements.

The total receipts of the Opium Department during the year 1884-85 are shown by the Accountant-General to have amounted to Rs. 6,13,93,000. This amount is made up as follows:—By sale of provision opium Rs. 6,05,20,000, by cost price of opium issued for excise purposes Rs. 5,48,229, and the balance by miscellaneous receipts. The total charges amounted to Rs. 2,96,32,000, made up as follows:—By payments to cultivators Rs. 2,55,94,000; manufacturing charges Rs. 31,31,000; salaries and establishments Rs. 8,99,000; and the balance by miscellaneous expenditure. The net revenue of the department for 1884-85 was Rs. 3,17,64,000, as against Rs. 5,05,72,000 for the preceding year. The falling off is due both to the fact that 7,702 fewer chests of provision opium were sold during 1884-85, and also to the enormous payments to cultivators for the large crop of the year, which exceeded by over 108 lakhs of rupees the payments of the preceding year. The large crop also necessitated increased expenditure on account of manufacture.

The following statements show the receipts, charges, and net revenue of the Opium Department during the official year

Results for the official year 1885-86 as compared with the official years 1869-70, 1885-86, 1870-71, 1879-80, 1883-84, and 1884-85. Some of the figures for 1884-85 will be found to differ from those given in the last General Administration Report, owing to the accounts for that year not having been finally closed when the Accountant-General submitted his statement from which the figures were taken. For the same reason, the figures for 1885-86 are open to correction:—

1	2	3	4	5	6	7	8	9	10

Statement showing the receipts, charges, and net revenue on account of abkari opium for the following years.

YEAR.	Sale proceeds of opium.	Cost of opium and contingencies.	Balance.	REMARKS.
	Rs.	Rs.	Rs.	
1869-70	30,30,184	6,92,495	23,37,689	
1870-71	30,42,407	10,17,168	20,25,239	
1879-80	13,62,408	4,300*	13,58,108	* The practice of debiting to the Abkari Department the cost of opium at Rs. 7-4 per seer was discontinued from 1871-72.
1883-84	15,92,417	6,755*	15,85,662	
1884-85	15,60,270	7,262*	15,53,008	
1885-86	15,35,081	28,148*	15,06,933	

The number of chests of provision opium of both Agencies sold during the year 1885-86 amounted to 50,994, being 4,296 chests in excess of the number sold during the previous twelve months. The total receipts amounted to Rs. 6,35,70,739 and the charges to Rs. 3,05,08,885, leaving a net revenue of Rs. 3,30,67,854, being Rs. 12,67,176 in excess of that of the previous year and Rs. 1,75,04,492 less than that of 1883-84. The average price realised per chest amounted to Rs. 1,234-10-6½, against Rs. 1,295-15-10½ in 1884-85, showing a decrease in the price of Rs. 61-5-4½ as compared with the previous year.

The administration of the Opium Department in 1885-86 will be reviewed in the General Administration Report for 1886-87.

SALT.

The following statement compares the financial results of the department during 1885-86 with those of the previous five years:—

HEADS.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.

The results of the year under report, as compared with the previous year, show a decrease of Rs. 12,29,533, or 6 per cent. in the receipts, and a decrease of Rs. 29,737, or 10·9 per cent., in the charges. There was a decrease under all the heads of receipts; that under the head of Duty was due to smaller clearances, and that under the head of Rent of warehouses to a reduction in bonding transactions. The decrease in the charges was chiefly due to smaller refunds of Customs duty on salt.

The total quantity of salt in stock at the commencement of the year was 15,41,259 maunds against 20,00,056 maunds in 1884-85. During the year 94,01,468 maunds were imported or manufactured against 1,00,50,107 maunds in 1884-85, and 9,82,909 maunds were in stock at the close of the year. Of the stock in hand at the commencement of the year, 11,10,199 maunds were imported and the remainder was excise salt.

Importation of salt was confined during the year to the ports of Calcutta and Chittagong, and there was a decrease of 6,69,495 maunds as compared with the total quantity imported in the previous year. In Calcutta salt was

imported from the United Kingdom, Hamburg, Bombay, the Arabian and Persian Gulfs, Italy, and Port Augustus; and in Chittagong from the United Kingdom, Madras, and Akyab. There was no importation in Cuttack.

The clearances of salt from shipboard in Calcutta showed a decrease of 1,26,796 maunds, or 1·7 per cent., and in Chittagong of 1,35,983 maunds, or 68·9 per cent. In the aggregate there was a decrease of 2,62,779 maunds, or 3·4 per cent., and of Rs. 7,45,513, or 5 per cent., in the duty realized. There was an additional clearance of 13,000 maunds from shipboard at Chittagong under bond for Naraingunge. The total quantity cleared from bond in all ports amounted to 19,06,624 maunds against 21,19,010 maunds in 1884-85, and realized a duty of Rs. 38,13,248 against Rs. 42,38,022.

Salt was manufactured under the Excise Rules in Orissa only. As compared with 1884-85, there was an increase of 20,832 maunds, or 4·8 per cent., in the total quantity manufactured. The increase in Pooree and Balasore amounted to 23,065 maunds and 1,028 maunds, respectively, while Cuttack showed a decrease of 3,260 maunds. The decrease in Cuttack is attributed to the heavy rains of March 1886.

The total quantity of excise salt sold amounted to 4,78,749 maunds against 5,01,255 maunds in 1884-85, yielding a duty of Rs. 9,57,498 against Rs. 10,02,512 in the previous year. There was a decrease in the sales, amounting in the 24-Pergunnahs to 2,989 maunds, in Cuttack to 20,719 maunds, and in Balasore to 11,859 maunds; while in Puri there was an increase of 13,060 maunds. The decrease in the 24-Pergunnahs is said to be due to the stock of salt in the golahs having been disposed of. It is reported that the decrease in Cuttack was very probably caused by an illicit trade carried on in the district, unsuspected by the Executive and unhindered by the Police. The Salt Department in Orissa has now been transferred to the control of the Commissioner of Salt Revenue, Madras, and the Lieutenant-Governor hopes that the trained supervision to which the operations are now subjected will stamp out illicit dealings.

The sales of salt in the saliferous districts showed a decrease of 13,906 maunds as compared with the previous year. The decrease occurred chiefly in the districts of Chittagong, Cuttack, and Balasore. There was a decrease of 16 in the number of seizures, while there was an increase of 98 maunds in the quantity of salt attached, and the quantity confiscated fell off by about 53 maunds. The cases instituted for offences against the salt laws were 469 against 959 in the previous year. The amounts realised as fines and disbursed as rewards were Rs. 2,179 and Rs. 1,446, against Rs. 4,704 and Rs. 3,565 respectively in the previous year.

The following table shows the despatches of salt into the interior by the different water routes and railways in the last two years :—

YEAR.	Via Balli khall.	Via Sankrail.	Via Gewakhelly.	Via Kidderpur.	Via Ballaghatta.	Total carried by water.	By the East Indian Railway.	By the Eastern Bengal and Calcutta and South-Eastern Railway, or via Chupur.	Via Rutherford Ghat.	Total carried by rail.	GRAND TOTAL.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
1884-85	12,10,900	6,50,709	3,15,291	3,66,254	16,66,588	42,00,402	36,78,048	4,19,456	6,34,094	47,32,498	89,41,900
1885-86	13,34,911	6,28,171	3,20,296	3,23,522	16,51,044	42,58,974	35,42,280	4,44,487	5,51,087	45,39,854	87,98,828
Increase	1,24,011	...	5,005	49,572	...	25,031
Decrease	22,198	...	42,732	11,544	...	1,35,768	...	81,907	1,92,644	1,43,072

From the figures given above it appears that there was an increase of 49,572 maunds in the quantity of salt conveyed by water, and a decrease of 1,92,644 maunds in the despatches by rail. The quantity of salt bonded during 1885-86 was 14,88,290 maunds against 16,61,055 maunds in the previous year. The decrease is due to low freights and depression of trade, which held out less inducement to merchants to clear their salt from ship board for the return cargo. The quantity of salt remaining in storage at the close of the year was 4,51,765 maunds against 9,38,858 maunds at the beginning.

EXCISE.

The financial results of the year were a decrease of Rs. 4,67,386 in the revenue, and an increase of Rs. 15,908 in the charges. The largest falling off in revenue occurred in Calcutta (Rs. 97,841), Patná (Rs. 56,503), Bhagalpur (Rs. 45,134), Gayá (Rs. 40,595), Chittagong (Rs. 30,598), Durbhanga (Rs. 28,902), Monghyr (Rs. 27,855), and Húgli (Rs. 22,709); while the most considerable increase was shown in Maimansingh (Rs. 30,460). The variations in each division and the incidence of the revenue were—

Division	Increase. Rs.	Decrease. Rs.	Incidence per 100 of population.
Bardwán (without Howrah town)	32,881	13
Presidency (without Suburbs)	41,476	10
Calcutta, Suburbs, and Howrah	97,841	227
Rájsháhí	22,625	7
Dacca	29,364	8
Chittagong	34,567	7
Patná	1,57,734	15
Bhagalpur	97,581	12
Orissa	5,391	13
Chutiá Nágpur	17,435	13

The following table shows the fluctuations in the revenue under the different heads:—

ARTICLES	REVENUE.			IN 1885-86 COMPARED WITH 1884-85.		IN 1885-86 COMPARED WITH 1880 TO 1885.	
	Average of 1880-81 to 1884-85.	In 1884-85.	1885-86.	Increase.	Decrease.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Country spirits ..	47,30,908	48,55,222	45,10,228	3,14,991	2,20,680
Rum ..	1,10,894	88,707	77,091	21,616	33,803
Imported wines, &c. ...	1,94,352	2,28,218	2,18,466	9,752	24,114
Tari ...	6,62,177	6,74,368	6,58,552	15,816	3,625
Pachwai ...	1,67,327	1,58,820	1,50,544	8,276	16,783
Charas ...	4,231	1,619	1,616	27	2,585
Sidhi, sabzi or bhang ...	31,549	34,364	34,423	59	2,874
Majum ...	2,386	2,339	2,347	8	39
Madul ...	86,765	91,027	86,702	4,325	63
Chundoo ...	26,142	28,549	30,889	2,340	4,747
Spirits used for arts ..	561	411	320	91	241
Ganja ...	17,87,315	19,87,600	19,46,627	40,973	1,59,282
Opium ...	17,85,787	18,83,932	18,57,978	25,954	72,191
Miscellaneous ...	5,996	3,793	5,770	1,977	226
Total ...	95,96,420	1,00,48,969	95,81,583	4,411	4,71,797	2,63,208	2,78,045

It will be observed that the revenue decreased under every head, except charas, sidhi, majum, chundoo, and miscellaneous. The sum of Rs. 95,81,583 represents the gross realization during the year, including advance collections made on account of the succeeding year, the revenue for the year itself, being Rs. 95,08,040.

The total number of shops licensed for the sale of *country spirits* was only 4,204, against 4,422 in 1884-85. Of these, 590 were licensed under the sudder distillery system and 3,614 were licensed under the outstill system, against 479 and 3,943 respectively in the previous year. The increase of shops under the sudder distillery system was due to the re-introduction of the system into large towns, where country liquor is the principal alcoholic drink of the people. It is a grave error to assume, as has been constantly done, that outstills and central distilleries are two systems opposed to one another, clearly defined and radically different in principle, and producing diametrically opposite results. The Excise Commission have shown that both systems have their proper place in the administrative economy of the province, the former being suitable for sparsely populated rural tracts, where great facilities exist for illicit distilling, while the latter is appropriate for towns, the neighbourhood of factories, and other localities where a considerable body of

consumers is gathered together within a small and compact area. The sudder distillery system was during the year under report in force in Bardwán, Húglí (except Jahánábád), Calcutta, parts of 24-Pergunnahs, Murshidábád, Dacca, Gayá, Durbhanga, Chupra, Bettíá, Monghyr, Jamalpur, Bhagalpur, Santál Pergunnahs, the head-quarters stations in Orissa, and Giridih in Hazáribágh. The decrease in the revenue from this branch of the excise was universal throughout the province, the largest falling off occurring in Calcutta (Rs. 1,23,285), Gayá (Rs. 79,987), Patná (Rs. 72,860), Bhagalpur (Rs. 59,994), Lohárdagá (Rs. 38,113), Durbhanga (Rs. 36,980), Hazáribágh (Rs. 27,252), and Champáran (Rs. 24,477). The decrease in Calcutta is due to unfavourable settlements of surrendered shops owing to a temporary combination among the vendors, and in Hazáribágh and Lohárdagá to unfavourable settlements owing to the partial failure of the harvest. In the remaining districts the chief causes of the deduction in receipts were bad harvests and the re-opening of sudder distilleries. That the changes recommended by the Excise Commission would, at the outset, have an unfavourable effect on the revenue from outstills in some places was to be expected; but this was a natural consequence of the reform. There can be no doubt as to the wisdom of maintaining the outstill system in rural tracts, though the extension of this system to some urban areas resulted in an artificial increase in the revenue, accompanied by serious defects in administration. A return to the method of direct control in large towns is advisable in the interests of good government.

The number of wholesale licenses for the vend of *rum* fell from 23 to 20, and the number of licenses for the retail sale fell from 93 to 86. The revenue on the whole fell from Rs. 98,707 to Rs. 77,091. The quantity of rum of local manufacture passed for consumption is steadily diminishing in consequence of increased importation of foreign rum and cheap brandies. The revenue from licenses for

Rum.

Imported wines.

there was an increase in

Tari.

amounted to Rs. 6,58,552, against Rs. 6,74,368, the decrease chiefly occurring in Húglí, Calcutta, Patná, Gayá, Muzaffarpur, Durbhanga, Maldah, and Hazáribágh.

The number of licenses for the sale of *pachwai* was 2,162, against 2,168 in 1884-85, and the revenue fell from Rs. 1,58,820 to Rs. 1,50,544. The actual results of the year itself, however, excluding arrear and advance collections, show a decrease of Rs. 13,437, the decrease chiefly occurring in Bardwán, Bírghúm, Murshidábád, and Dárlíng. The high price of rice—the raw material of *pachwai*—is considered to be the chief cause of the decrease in revenue.

Pachwai.

Ganja.

The *ganja* crop of the year was less plentiful than in the previous year, being 3,887 maunds, against 7,076 maunds, and the result was a considerable rise in prices. The wholesale price of flat ganja ranged between Rs. 15 and Rs. 40, against Rs. 6 and Rs. 35, and that of round ganja between Rs. 20 and Rs. 50, against Rs. 8 and Rs. 40. There was a decrease in the number of shops from 3,196 to 3,033; in the quantity consumed from 5,798 maunds to 5,717 maunds; in the revenue from license-fees from Rs. 5,62,417 to Rs. 8,60,991; and in the revenue from duty from Rs. 11,25,183 to Rs. 10,85,636. The actual results of the year itself, however, show a decrease of Rs. 56,076 in the total revenue realized from ganja. There were no cases of ganja smuggling of any importance reported during the year.

Opium.

There was a decrease of 93 in the number of licenses issued for the sale of excise *opium*, a decrease of 34 maunds in consumption, and a decrease of Rs. 25,954 in the revenue realized. By far the largest decrease occurred in the Chittagong district, where consumption had for years shown an increase without any proportionate increase in the amount levied from license-fees—a fact which pointed to extensive smuggling of the duty-paying drug into Burmah. During the year, however, more active measures were adopted to prevent illicit dealings

both in Chittagong and in Burmah, with the result that while the quantity passed for consumption was reduced by 33 maunds 3 seers, the reduction in license-fees was only Rs. 110.

The number of arrests for offences against the excise laws was 4,122, against 4,228 in the previous year, and the number of persons convicted was 3,583, against 3,576. Of the persons arrested, 3,582 were other than licensed vendors, 460 committed breaches of license, and 80 were employed in the Excise Department.

STAMPS.

As in previous years, the stamp revenue was collected under the Indian Stamp Act, I of 1879, and the Court-fees Act, VII of 1870. No change was introduced either in the description of stamps used under the two Acts, or in the system under which they are supplied to the public.

During the year under report non-judicial impressed sheets of the value of four annas for use in realizing copying fees were received from England. The issue of these stamps commenced from November 1885, and consequently the sales of the stamps "for copies" during 1885-86 were composed partly of two-anna and partly of four-anna stamps. It is reported that the introduction of the four-anna stamps has resulted in the reduction of the manufacturing cost by one-half. Having regard to the economy thus effected, the question has been raised whether a similar description of paper to that now used "for copies" should not be used for non-judicial stamps of the value of two, four, and eight annas, whereby a saving of Rs. 56,000 a year might be effected. This question is under the consideration of the Government of India.

The representation of certain Insurance Offices in Calcutta for a reduction of the stamp duty on policies of insurance other than Life and Marine, and on re-insurances, was considered during the year. The duty on policies of re-insurance has been fixed at one rupee, irrespective of the amount of the policy; but the proposal to reduce the rates on short-term policies has been shown to involve the principle of levying a duty on renewals; and as it is uncertain whether the companies would approve such a change, the matter has been deferred pending a further expression of their opinion.

Certain documents called "kabinnamahs," or deeds of dower, executed on the occasion of marriages between Mahomedans, were referred by the Board to the High Court under section 46 of Act I of 1879, and the High Court held that the instrument in question was subject to stamp duty as a bond. But the Government of India, in exercise of the powers conferred by section 8 of the Indian Stamp Act, 1879, exempted this class of instruments from the payment of stamp duty.

It came to the notice of the Board that general powers-of-attorney executed by two or more persons authorizing one or more agents to act on behalf of them in their joint and several interests were, in some instances, stamped under Article 50 of Schedule I of the Indian Stamp Act according to the number of persons *authorized* to act jointly and severally, irrespective of the number of persons *executing* them. The Board held that each of the parties executing a power should pay a separate stamp duty, to be calculated according to the number of persons authorized to act, if the power authorizes the agents to act on behalf of the executants in their joint and several interests, and the High Court agreed with the principles laid down by the Board.

Another case of importance was decided by the High Court. A firm of Solicitors in Calcutta submitted for adjudication of stamp duty a deed conveying a tea-estate from certain persons as private individuals to themselves as a Limited Company. The deed was held by the Collector to be a conveyance, and *ad valorem* stamp duty on the nominal value of the property was charged. The firm appealed to the Board, urging that the tea estate was, for its convenient working, intended to be transferred from the vendors under one designation to themselves under another, and that therefore the deed could not be made liable to *ad valorem* duty as a conveyance, but should be stamped as a "transfer" under clause (b) of Article 60, or as a "declaration of trust" under Article 25 of Schedule I of the Stamp Act. The Board submitted the case for the opinion of the High Court, which decided that the deed

- should be stamped under Article 21 as a conveyance chargeable with *ad valorem* duty on the par value of the shares and debentures.

Stamp revenue.

The financial results of the administration of the Stamp Department during the year are shown in the following table:—

YEAR.	STAMPS UNDER ACT I OF 1879.			COURT-FEES UNDER ACT VII OF 1879.			TOTAL.		
	Receipts.	Refunds and other charges.	Net revenue.	Receipts.	Refunds and other charges.	Net revenue.	Receipts.	Charges.	Net revenue.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1881-82	33,29,909	1,99,279	31,30,630	87,61,713	3,46,823	84,14,890	1,30,23,922	5,30,102	1,14,81,820
1882-83	33,58,795	1,88,338	31,70,457	88,54,739	3,19,251	85,35,488	1,24,13,331	5,37,559	1,16,75,975
1883-84	31,83,098	2,13,385	29,69,713	9,39,516	3,84,697	8,54,819	1,25,76,994	5,30,992	1,19,85,922
1884-85	31,77,988	2,01,296	29,76,692	9,33,236	4,07,185	91,26,051	1,29,91,214	6,11,711	1,23,79,503
1885-86	33,75,07	1,99,587	31,75,480	9,52,79	4,24,155	9,28,644	1,32,58,046	6,25,992	1,26,32,054

The first four years' figures in the above statement are based on the returns furnished by the Accountant-General in his final statements for those years, while the figures for the year under report are approximate only. The total realizations under the Indian Stamp Act exceed those of the preceding year by Rs. 1,17,319, and are the largest that have been obtained since the introduction of the Act. In consequence of a comparative decrease in the charges, the net revenue was higher than that of 1884-85 by Rs. 1,21,988. In the sale of judicial stamps, there was an increase of Rs. 1,49,513, and, exclusive of charges and refunds, there was an increase of Rs. 1,30,563 in the net revenue. The realizations under the two Acts amounted to Rs. 1,32,58,046, against Rs. 1,29,91,214 in the previous year, giving an increase of Rs. 2,66,832. The charges amounted to Rs. 6,25,992, and the net receipts to Rs. 1,26,32,054.

The following table shows the receipts from sales of the different descriptions of stamps during 1884-85 and 1885-86:—

YEARS.	SALES OF NON-JUDICIAL STAMPS, OR STAMPS USED UNDER THE INDIAN STAMP ACT.										SALES OF JUDICIAL STAMPS, OR STAMPS USED UNDER THE COURT-FEES ACT.				
	Impressed sheets, including title-deeds, contracts, and salt bonds, Public Works Department contract and tender forms.	Impressed labels.	Receipt or revenue stamps.	Share transfer stamps.	Foreign bill stamps.	Hundi or bills of exchange stamps.	Notarial stamps.	Advocate, vakeel, and attorney stamps.	Impressed one-anna stamps for cheques, bills, &c.	Total of non-judicial stamps.	Adhesive and unpressed court-fee stamps.	Stamps for copies.	Total of court-fee stamps.	Total of both kinds of stamps.	
1884-85	Rs. 24,13,233	Rs. 5,89,917	Rs. 1,86,016	Rs. 23,408	Rs. 34,590	Rs. 79,589	Rs. 4,371	Rs. 10,035	Rs. 40,797	Rs. 34,11,956	Rs. 89,63,519	Rs. 4,11,427	Rs. 93,64,946	Rs. 1,27,76,902	
1885-86	24,45,294	5,67,237	2,08,125	22,115	33,074	86,562	4,755	7,000	39,826	31,14,388	90,41,563	4,61,326	95,09,289	1,29,21,677	
Increase	2,061	22,079	22,079	1,516	7,233	484	2,132	91,441	52,509	1,44,343	1,46,775	
Decrease	22,680	1,293	3,025	951	
Increase per cent.	0.8	11.8	11.07	0.7	1.02	12.8	1.6	1	
Decrease per cent.	3.8	5.5	4.3	30.1	2.3	

There was an increase in the sales of impressed sheets, receipt or revenue stamps, hundi or bill-of-exchange stamps, notarial stamps, court-fees stamps, and stamps for copies, and a falling off in the sales of impressed labels, share transfer, foreign bill, advocate, vakeel, attorney, and one-anna impressed stamps for cheques and bills. The total sales of non-judicial stamps amounted to Rs. 24,45,294, or Rs. 2,061 in excess of the preceding year. Twenty-two districts showed an increase, while there was a decrease in 23 districts. The sale of impressed labels, which is limited to Calcutta, amounted to Rs. 5,67,237, against Rs. 5,89,917 of the previous year, showing a decrease of Rs. 22,680. It is reported that the decrease under this head would have been much greater, but for the stamping of the conveyances of certain tea estates, on

which *rad valorem* duty was paid under the ruling of the High Court referred to above,

Receipt stamps.

The sale of one-anna receipt stamps increased from Rs. 1,86,046 in the preceding year to Rs. 2,08,125. Thirty-three districts yielded an increase of Rs. 24,088, while in twelve districts there was a falling off of Rs. 2,009. There is still much room for improvement in this branch of the revenue, and the Lieutenant-Governor hopes that the extended use of the Post Office for the sale of these stamps will tend to diminish the evasion of the law which is now undoubtedly very common. The

Other classes of non-judicial stamps.

sale of foreign bill stamps amounted to Rs. 33,074, against Rs. 34,590 in the previous year, showing a decrease of Rs. 1,516. The falling off is attributed to the fact that remittances are now made by telegraphic transfer more frequently than formerly. The Collector is of opinion that a larger decrease may occur in future. The sum realized on account of the advocate, vakeel, and attorney stamps, which are sold through the Registrar of the High Court, was Rs. 7,000, against Rs. 10,025. This decrease is due to a smaller number of enrolments at the Bar of the High Court. The sale of share-transfer stamps amounted to Rs. 22,115, against Rs. 23,408 of the previous year. There was an increase in the receipts from the stamps for notarial acts, the amount sold being Rs. 4,855, against Rs. 4,371. The receipts from the sale of hundi stamps amounted to Rs. 86,862, against Rs. 79,569 in the previous year. Under the head of one-anna impressed stamps, which are impressed by the Superintendent of Stamps on skeleton forms of cheques, drafts, brokers' notes, &c., the receipts were Rs. 39,826, against Rs. 40,797 in 1884-85.

Under the head of Judicial Stamps are included the sale proceeds of

Judicial stamps.

adhesive and impressed court-fee stamps, High Court service and Calcutta Small Cause Court stamps, and stamps for copies. Exclusive of the stamps for copies, the sales of judicial stamps amounted to Rs. 90,41,963, against Rs. 89,53,519 in the previous year. There was an increase in 31 districts, ranging from 87·3 per cent. in Singbhúm to 1·2 per cent. in Tipperah, and a decrease in 14 districts, varying from 19·6 per cent. in Rájsháhí to ·07 per cent. in Dinagepur. The principal increases occurred in the 24-Pergunnahs, Huglí, Dacca, Gayá, Bakarganj, Jessor, Chittagong, Khulna, and Cuttack. The falling off was considerable in Rájsháhí, Bhagalpur, and Monghyr. The proceeds of the sale of stamps for copies amounted to Rs. 4,64,326, being 12·8 per cent. in excess of the receipts during the previous year.

The following statement compares the number of cases in which deficient stamp duty and penalty were levied by Civil Courts

Levy of penalties.

and Collectors under sections 34 and 37 of the Indian Stamp Act during the year under report and the previous year:—

YEAR.	NUMBER OF CASES IN WHICH DUTY AND PENALTY WERE LEVIED BY			AMOUNT OF DUTY AND PENALTY REALIZED BY		
	Civil Courts.	Collectors.	Total	Civil Courts.	Collectors.	Total.
				Rs.	Rs.	Rs.
1884-85	1,198	2,193	3,691	13,815	22,866	36,681
1885-86	1,586	2,162	3,748	12,629	21,699	34,328

The total number of cases detected by the Civil Courts showed an increase of 88 cases, or 5·8 per cent. There was a decrease of Rs. 1,186, or 8·5 per cent., in the amount of duty and penalty realized under the orders of the Civil Courts. The number of cases in which action was taken by the revenue officers showed a decrease of 31 cases, or 1·4 per cent., and the amount of duty and penalty realized at their instance showed a decrease of Rs. 1,167, or 5·1 per cent.

The results of the prosecutions instituted for infringement of the provisions of the Indian Stamp Act during the year under

Prosecutions.

report were satisfactory. Seven hundred and sixty-seven cases in which 954 persons were brought to trial were instituted, against 595 cases in which 704 persons were concerned in the preceding year. The fines imposed by the Magistrate amounted to Rs. 6,361, against Rs. 5,367 in 1884-85.

LICENSE TAX.

The license tax in Bengal was, as heretofore, levied under Act II (B. C.) of 1880. Out of a total number of 248,134 villages in the province, 26,735 were found to contain assessesces, and 26,232 villages, including 580 streets in Calcutta, were visited by the assessing officers, against 25,619 in the preceding year. Only, 1,810 villages are said to have been specially visited by officers of the regular executive staff, against 2,677 in 1884-85; but as district and sub-divisional officers frequently keep no record of the number of villages in which enquiries are made during their cold weather tours, these figures show only a part of the work done.

After exclusion of double entries, and allowance for revision of the lists by Collectors, the number of persons assessed was 75,396. Of these, 5,215 were exempted on objection and 299 on appeal, leaving 69,882 persons on the list of assessesces on the 30th June as compared with 70,259 in 1884-85. This, however, is not a fair comparison, for the outstanding balance on the 30th June 1885 was Rs. 10,223, and of this the greater part had to be remitted, the number of persons finally assessed in 1884-85 being reduced to 69,530. The following table shows the number of assessesces in each class in each of the last two years:—

		NUMBER OF ASSESSEES		
Class		Tax assessed.	On the final lists in 1884-85.	On the lists of 30th June 1886.
			Rs.	
I	...	500	388	395
II	...	200	697	691
III	...	100	1,411	1,377
IV	...	50	3,584	3,534
V	...	20	14,602	14,821
VI	...	10	43,848	49,064
Total		69,530	69,882

These figures show an increase of 352 in the number of assessesces, but this will eventually be reduced when the enquiries into the outstanding balance on the 30th June 1886, amounting to rather more than Rs. 7,000, have been completed. The population of Bengal being 66½ millions, one person in every 951 paid the tax, and the average incidence was Re. 1 to every 46 persons. The incidence was highest in Calcutta and lowest in Singbhúm.

The number of objections lodged was 18,678, or 24·7 per cent. of the gross number of assessments made, the corresponding percentage in 1884-85 being 25·4. In 11,258 cases the original assessments were upheld; in 2,204 they were modified by the transfer of the objector to a lower class; and in 5,215 cases the assessments were cancelled. The number of appeals pending on the 30th June was 9, against 69 in the previous year. The number of applications to Commissioners outside Calcutta under section 21 of the Act was 79, of which 64 were rejected, 6 were granted in part, 7 were cancelled, and 2 were pending at the close of the year

The following table shows the demand, remissions, collections, and balances up to the end of June for each of the last two years:—

Class.	Rate of tax.	Gross demand.		Remissions before realization.		Remaining demand.		Collections.		Refunds.		Net collections.		Balances.	
		1884-85	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85.	1885-86.	1884-85	1885-86.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
I	...	500	2,36,750	3,09,500	36,500	97,750	2,00,250	2,15,750	2,00,270	2,15,750	6,250	18,500	1,04,000	1,97,250
II	...	200	1,72,800	1,80,400	29,200	35,000	1,43,600	1,46,400	1,43,600	1,16,000	4,400	8,400	1,39,200	1,37,000
III	...	100	1,76,400	1,70,000	30,000	29,850	1,45,500	1,45,100	1,45,000	1,44,550	4,200	7,600	1,41,800	1,37,050	500
IV	...	50	2,16,500	2,15,825	32,500	31,950	1,84,000	1,83,875	1,83,550	1,83,055	4,050	7,250	1,78,840	1,70,405	400
V	...	20	3,35,360	3,40,500	37,170	39,500	2,98,190	3,01,000	2,95,892	2,99,517	4,220	4,800	2,91,012	2,94,747	2,358
VI	...	10	5,61,780	5,51,125	62,925	66,000	4,98,955	4,90,519	4,92,050	4,90,207	4,055	4,100	4,87,195	4,80,098	6,905
Total	16,99,690	17,73,430	2,29,095	2,86,050	14,70,495	14,86,774	14,60,271	14,79,709	28,275	60,640	14,31,996	14,20,190	10,223

It must be borne in mind that the system under which the above figures, except those showing "Net collections" and "Balances," are produced, is somewhat complicated. It is a system of double entry under which transfers from one grade to another are effected by exhibiting the full amount in one grade as assessed and remitted, and in the other as assessed. Such assessments thus appear twice over, and swell the apparent demand. There was again a falling off in the net collections, which the Board ascribe to the general depression in trade and to revision of original assessments. The net receipts from the tax fell off in 22 districts and increased in the remainder. The districts which showed a large percentage of decrease are—

		Collections in 1884-85. Rs.	Collections in 1885-86. Rs.	Decrease in 1885-86. Rs.	Percentage of increase.
Maldah	...	20,048	17,414	2,634	13.1
Bírbhúm	...	9,150	8,122	1,028	11.2
Monghyr	...	43,836	40,068	3,768	8.5
Muzaffarpur	...	34,858	32,126	2,732	7.8
Dacca	...	47,564	44,216	3,348	7.03
Húglí	...	18,983	17,678	1,305	6.8

The decrease in Maldah is ascribed to the reduced circumstances of the assesses, brought about by the floods of last year, following upon a succession of bad harvests. The general depression of trade, aggravated more or less by local circumstances, is alleged as the cause of the decrease in Bírbhúm, Húglí, and Dacca; while the falling off in Monghyr is attributed to faulty assessment. In Muzaffarpur the failure of some banking firms, coupled with destructive fires and scanty harvests, affected for the worse the economic condition of the people, and many petty dealers and money-lenders closed their business.

The largest increase in the collections occurred in—

		Collections in 1884-85. Rs.	Collections in 1885-86. Rs.	Increase in 1885-86. Rs.	Percentage of increase.
Champáran	...	17,235	18,970	1,735	10.06
Dinagepur	...	34,290	37,570	3,280	9.5
Gayá	...	27,040	29,633	2,593	9.5
Bardwán	...	14,790	15,850	1,060	7.1
Nadiyá	...	17,200	18,330	1,130	6.5

In Champáran, Dinagepur, Gayá, and Nadiyá the increase is due to revision of assessments. The increase in Bardwán is unexplained.

The actual remissions and refunds, after eliminating double entries, amounted to Rs. 2,07,820, or 12.6 per cent. of the total demand, as compared with Rs. 1,53,460, or 9.6 per cent. in the previous year. The balance on 30th June 1886 amounted to Rs. 7,005, the bulk of which is irrecoverable and will have to be written off. The charges for the collection of the tax amounted to Rs. 85,000, against Rs. 87,000 in the previous year.

The license tax has, from the beginning of the current year, been replaced by the income tax, and the year whose transactions are recorded in the Board's present report is the last of the operation of the former impost. The license tax in its recent form was the outcome of Sir John Strachey's scheme of famine finance. This scheme proposed to improve the financial position of the Empire to the extent of two crores of rupees a year, of which 50 lakhs were to be regarded as a normal working balance, while 150 lakhs were to be devoted to famine insurance, being expended either on actual relief, on reduction of debt, or on the construction of remunerative works calculated to prevent or mitigate the severity of the famine. Part of this sum it was proposed to provide by new taxation (*i.e.*, by the license tax), the remainder being obtained by throwing additional charges on the Provincial Governments.

The year 1878-79 was the first year of the operation of the License Tax Act, I (B.C.) of 1878. This Act imposed a duty on all trades, dealings, and industries, the profits of which were not less than Rs. 100 a year. The minimum taxable income was, however, raised in 1879-80 to Rs. 250, and in the following year was further raised to Rs. 500 under the amending Act II (B.C.) of 1880. This measure, which exempted from taxation 66,567 of

the poorest class of assesses, and relieved from harassment a still larger number of persons with incomes slightly below the former minimum, did much to allay the discontent with which the tax was, as a direct tax, necessarily received. The Act of 1880 further assimilated the law for Calcutta and the districts in the interior; absolved the assesses from the liability to take out more than one license, however many places of business they might have; exempted municipal bodies from the performance of license tax work; granted the right of reference to the Commissioner by a person aggrieved by the order of the Collector in cases of objection and appeal; and imposed the obligation on the license tax authorities to serve notices on assesses of all classes. The alteration in the minimum taxable income necessitated a complete revision of the assessment lists of the lowest class; and as the assessments in the higher grades also required careful scrutiny, a complete assessment of the province was undertaken in 1880. This assessment has formed the basis of the administration of the tax since then, though the lists for each district have of course been carefully revised in each year.

In the first few years of the administration of the tax, the collections were disproportionately small compared with the gross demand, the percentages being 44.0 in 1878-79, 61.7 in 1879-80, and 55.4 in 1880-81. This result could scarcely have been avoided in the initiation of so large and difficult an undertaking without a specially trained staff, and without the assistance of the permanent revenue establishments which did so much to facilitate the work in the North-Western Provinces and other temporarily-settled provinces. The assessing officers not being allowed to make any precise enquiry into income, were compelled to settle on general grounds the classes in which the assesses should in the first instance be placed, leaving them to object if so advised. The disparity was further due to the want of adequate supervision by District Collectors. In the commencement the circle officers were left too much to their own resources, and it is certain that whether from pressure of other business or from trusting to the possibility of correcting errors at a later stage of proceedings, many Collectors failed to give sufficient time and attention to the guidance of circle officers in making the original assessments, and much trouble was thereby occasioned at a subsequent stage of the work. Gradually the proportion which the amount collected bore to the gross demand became more satisfactory. The following figures show the total receipts from license tax from 1878-79 to 1885-86:—

					Rs.
1878-79	20,19,400
1879-80	25,61,700
1880-81	16,53,000
1881-82	16,38,900
1882-83	15,20,300
1883-84	15,17,600
1884-85	14,96,400
1885-86	15,33,800

The large decrease in receipts in 1880-81 was chiefly due to the raising of the minimum taxable income to Rs. 500. This measure also resulted in a large reduction in the cost of collection. In 1878-79 the charges aggregated Rs. 3,34,069; in 1879-80, Rs. 1,47,785; in 1880-81, Rs. 1,62,694; in 1881-82, Rs. 83,034; in 1882-83, Rs. 89,371; in 1883-84, Rs. 91,249; in 1884-85, Rs. 87,159; and in 1885-86, Rs. 85,182.

According to the figures of the last census, the proportion of assesses was—

1 in every 78	...	in 1878-79.	1 in every 951	...	in 1882-83.
1 in every 480	...	in 1879-80.	1 in every 952	...	in 1883-84.
1 in every 921	...	in 1880-81.	1 in every 946	...	in 1884-85.
1 in every 965	...	in 1881-82.	1 in every 951	...	in 1885-86.

VI.—VITAL STATISTICS AND MEDICAL SERVICE.

Registration of Births and Deaths.

THE year under report was generally unhealthy, cholera and fevers having prevailed to a greater extent than in the previous year. A characteristic feature of the year was the heavy inundations caused by the abnormal rainfall in different parts of the Province, the registered average rainfall being 70·24 inches, against 66·81 inches, the average of previous years. Referring to the effects of the inundations, the Sanitary Commissioner observes that “while, on the one hand, they proved a calamity by destroying and damaging the agricultural outturn wholly or partially, and by causing heavy loss of cattle, they exercised, on the other hand, a great power for good by diminishing sickness in the great majority of the localities in which they prevailed.” The price of food-grains, especially common rice, the staple food of the poorer classes, ranged high, and gave rise to much distress which re-acted unfavourably on the public health. The districts which suffered most in this respect were Bardwán, Midnapur, Murshidábád, Rájsháhí, Bogra, Gayá, Sháhábád, Durbhanga, Cuttack, Balasor and the Santál Pergunnahs. In several of these, relief works had to be opened by Government or the District Road Committees.

A slight improvement was made in the registration of vital statistics, though the results of the year are still far from being accurate. Births were registered in 46 towns with a total population of 1,664,577, against 47 towns with a population of 1,685,651 in the previous year. The number of births recorded was 41,133, giving a ratio of 24·71 per mille of the population, against 39,640, or a ratio of 23·51 per mille. Among a total population of 66,163,884 within the area in which the registration of deaths was carried on, 1,504,745 persons were reported to have died, showing an increase of 126,135 compared with the number of deaths recorded in the previous year. The ratio of deaths to population was 22·74 per mille, against 20·83 per mille in 1884. Many casualties caused by the cyclone and storm-wave in Orissa have, it is said, found no place in the year's statistics owing to there being no persons to record them, the chowkidars having perished with the inhabitants. It is estimated that in Orissa alone about 5,000 persons must have perished and no record of their death has been kept. It is gratifying to learn that “the instances were not rare in which a lively interest was manifested in the cause of registration.” Several municipalities have already taken over the work of registration from the hands of the police, and much of the improvement in the returns of the year is attributed to this cause. Under recent orders the work of registration will in future be performed by municipal agency in all those municipalities in which the provisions of the Compulsory Registration Act, IV (B.C.) of 1873, are in force, and it is hoped that better results may be looked for in future.

The following statement shows the death-rate from specific causes during the year, compared with that for the previous year and the quinquennium 1880-84:—

NAME OF DISEASES.	PROPORTION OF DEATHS PER 1,000 OF POPULATION.								
	In 1885.			In 1884.			In 1880-84.		
	Urban.	Rural.	Province.	Urban.	Rural.	Province.	Urban.	Rural.	Province.
Cholera ...	5·22	2·53	2·62	3·81	1·96	2·03	3·32	1·52	1·59
Small-pox ...	·33	·14	·14	1·10	·24	·28	·55	·25	·26
Fever ...	14·40	15·79	15·75	12·89	14·66	14·60	15·17	13·35	13·42
Bowel-complaints ...	4·12	·85	·96	3·24	·79	·88	3·67	·72	·83
Injury ...	·50	·43	·43	·44	·36	·37	·42	·34	·34
Other causes ...	7·02	2·66	2·81	5·91	2·54	2·66	5·90	1·98	2·13
All causes ...	31·63	22·42	22·74	27·43	21·58	20·83	29·05	18·19	18·59

There was an increase in the mortality under every head of disease, except small-pox. Further particulars will be found under the head of Sanitation.

The report of the Health Officer (Dr. McLeod) has been drawn up for the calendar year 1885 instead of the official year. This change is in accordance with the recommendation made by the Army Sanitary Commission. The number of births registered was 8,358, as compared with 8,290 in 1884. The Health Officer is of opinion that birth-registration during the year was more satisfactory than formerly; a birth-rate of 29·3 per mille was obtained, as compared with the English rate of 34·4. Among the various races the recorded birth-rates per mille were —

					1885.	1884.
Non-Asiatics	16·4	13·2
Mixed races	49·5	49·6
Hindus	20·3	20·2
Mahomedans	16·0	15·9
Other classes	4·1	4·2

The number of deaths recorded during 1885 (exclusive of still-births) was 12,707, as compared with 12,694 in 1884, giving a death-rate of 29·3 per mille, against 29·2.

At a special general meeting held on the 11th February 1886 a whole-time Health Officer was appointed by the Commissioners, and the appointment, regarding which during the past few years there had been much correspondence, received the sanction of the Lieutenant-Governor. Dr. Simpson assumed charge of his duties, after the year closed, on the 15th May 1886.

In the nine cantonments in Bengal containing an average population of 33,829, the number of deaths recorded was 727, or at the rate of 21·49 per mille. These figures have reference only to the non-military population. In 1884 the number of deaths was 812 among a population of 33,346, giving a death-rate of 24·35 per mille.

Mortality in Cantonments.

Emigration.

THE review of emigration from India to British and Foreign Colonies has hitherto been made for the financial year; for the future it will be made for the calendar year. The present review deals only with the operations of the last nine months (April to December) of the year 1885.

COLONIAL EMIGRATION.

Emigration was still regulated by Act VII of 1871 during the year under review. Act XXI of 1883, which has now taken its place, did not come into force until the 1st April 1886, owing to the necessity of framing rules on which the working of the Act depends, so as to bring them into harmony both with the provisions of the law, and with the views of the Colonial Governments, as represented by their accredited Agents in Calcutta. In August 1885 a Conference was held, in which the Agents for all Colonies now receiving Indian emigrants took part, and most of the alterations suggested by the Conference were adopted by Government and finally incorporated in the rules.

The year was marked by a striking falling off in the demand for Indian labourers. Of ten colonies which sent requisitions in 1884-85, seven ceased to do so altogether during the year under report, namely, Jamaica, St. Lucia, Grenada, Natal, Mauritius, Surinam, and Guadeloupe; while of the three remaining, British Guiana, Trinidad, and Fiji, the two former indented for a smaller number. On the whole, requisitions were received for 6,430 coolies, against 18,639 in 1884-85, and an average of 14,734 in the four preceding years. The falling off is understood to be due to the declining state of the sugar industry, in which the emigrants are mainly employed. In Jamaica the abandonment of the system is believed to be connected, also, with the introduction of representative legislation in the island, the importation under Government auspices of foreign workmen being distasteful to a large part of the population, as reducing the prospect of the employment of the local labourers on remunerative terms. Notwithstanding the decline elsewhere, there has been an increased demand for Indian labour in Fiji, the proximity of these islands to Australia and New Zealand giving them a special value as future fields for emigration. The great colonies beyond the Indian Ocean are somewhat nearer to this country than are the other settlements to which coolies are taken; ordinary wages in that region are very high, and there is an amount of reclaimable land which suggests the possibility of emigration at some future time on a scale large enough to give appreciable relief to the over-populated districts of Bengal.

Of the 306 licenses granted to recruiters, six only were cancelled for misconduct. The recruiters collected 7,567 persons: an average of 24·1 to each recruiter.

Recruitment.

Classified according to districts of registration, the largest number of emigrants were found, as usual, in the 24-Pergunnahs (945); but Patná (918) and Sháhábád (830) approximated very closely in this respect to the metropolitan district. Benares (626), Gayá (612), and Allahabad (489) come next in order: and no other district registered as many as 400 emigrants. The North-Western Provinces formerly supplied the largest number of emigrants, but during the last two years Bengal has headed the list, and in the year under report 4,692 emigrants were recruited in Bengal, while the North-Western Provinces only supplied 2,223. The change was due in great measure to continued dearth of food in Bengal and Behar; but some allowance must also be made for the

natural tendency in the Emigration Agencies to work the nearer and more accessible districts first, to save the expense of going to a greater distance to secure the labour required. In a year in which so few coolies were needed, it could hardly have been necessary to recruit as actively as formerly in the North-West. Classified according to the native districts of the recruits, Gayá sent the largest number, 980, Sháhábád 879, Patná 684, Monghyr 341, and Gházípur, in the North-Western Provinces, 338. These five districts form a compact tract, thickly populated by a fine and enterprising race, and may be looked upon as the most promising recruiting ground in Hindustan.

Seven thousand four hundred and eighteen out of the 7,567 persons recruited were admitted into depôt. Of the casualties accounting for this decrease, 119 were desertions—an unusually large proportion; and there were 337 more desertions after arrival at the depôt, a percentage of 4·13 to 2·58 in the corresponding period of the previous year. The number rejected by the Agencies as unfit was 1,126, or 13·80 per cent. of the whole, against 11·70 per cent. in the previous year. The health of the emigrants was good on the whole, the general average mortality being below the usual figures; but the disease, recently diagnosed as fever, appeared with fatal results in the British Guiana depôt.

Including the balance of the previous year, there were 8,157 persons in depôt; death and desertions reduced this number by 410, and 1,858 were discharged for various reasons by the Agencies. The number eventually despatched was 5,884, or 72·13 per cent. of the whole number recruited.

Of the 5,884 emigrants who actually embarked for the colonies, 3,502 were men, 1,560 women, and 822 children. Four hundred and eighteen of both sexes and all ages were “return emigrants,” the majority having come back to India from British Guiana, Trinidad, and Surinam. The rule regulating the proportion of women to men in each shipment was fully complied with, and it is satisfactory to note that the British Guiana Agency was able to forward 149 women over and above the prescribed number. The aggregate mortality on the voyages was 109—a percentage of 1·85 on the whole number embarked. On five of the ten ships the death-rate was below 1 per cent., but the total average was raised by rates of 4·25 and 2·60 on board two vessels for Demerara, due to the prevalence of fever of the cerebro-spinal type during the early part of the voyage, and by a considerable mortality among infants and young children in two other cases. A special medical enquiry is being held with regard to the cases of cerebro-spinal fever reported on the outward voyages.

Four thousand two hundred and thirty-three emigrants re-embarked from the colonies for India during the period under review, bringing with them the considerable sum of Rs. 4,67,665-6-9—an average of Rs. 111-0-11 per head. Five thousand eight hundred and eighty-four emigrants having embarked during the year, and 4,077 (excluding deaths on the voyage) having returned, the net result of the nine months’ operations was that emigration from the Port of Calcutta reduced the population of India by only 1,807. Those returning from British Guiana brought most money—their savings averaging Rs. 254-9-11 each, while the Mauritius emigrants returned with only Rs. 42-10-2 each—an amount far below the average of the last few years. The death-rate on the return voyages, as usual, ranged higher than on outward voyages, and on board the *Neva*, bringing emigrants back from Guadeloupe, the mortality reached so high a figure as 9·87 per cent. of the whole number on board. The mortality on the two previous return voyages from Guadeloupe was also excessive, and the explanation given—the feeble health of many of the passengers—seems to indicate that the country is not one in which Indian coolies thrive.

INLAND EMIGRATION.

The following administrative changes were carried out during the year 1885:—

Dr. Richards, Superintendent of Emigration at Goálánda, was appointed Registering Officer, in addition to his other duties, with the view to ensure better control over garden sirdars escorting batches of coolies. He was also vested with magisterial powers under sections 78 and 79 of the Inland Emigration Act.

The practice of executing labour contracts in terms of days was prohibited, as it was prejudicial to the labourer, because it made it difficult for him to ascertain when his contract had terminated, and was inconsistent with the provisions of section 116 of the Act, under which a labourer is exempted from the obligation of working for more than six days in the week.

The employers of labourers in Chittagong were allowed, in modification of previous orders, to keep registers in any form most convenient to themselves that would enable them to furnish the required returns.

Garden sirdars in charge of emigrants proceeding to Assam in country boats were directed to present way-bills to inspecting officers at certain places on the journey.

There was a further development during the year of the system of "free," or assisted, emigration, conducted by the private agents of employers, independent both of licensed recruiters and of certificated garden sirdars. The total number of free emigrants was less than in 1884; but the falling off was trifling in comparison with the decrease in registered emigrants.

The results of registered recruiting carried on by the two agencies provided by the Act, viz., (a) by licensed contractors and their recruiters, and (b) by certificated garden sirdars, may be stated as follows:—

- (a) Five contractors employing 147 recruiters registered 4,398 emigrants and dependents.
- (b) 1,743 garden sirdars certificated under the Act registered 12,006 emigrants and dependents: 6,297 *via* Dhubrí, and 5,709 *via* Goalánda.

The two agencies therefore collected in all 16,404 emigrants and dependents for transmission to the tea districts. Each licensed recruiter on an average registered 30 emigrants and each garden sirdar registered 6·8 emigrants.

The results of the operations of licensed recruiters and certificated sirdars are given in the following table showing the statistics of each class of emigrants registered during the last five years, exclusive of sirdari emigrants registered to proceed direct *via* Dhubrí:—

YEAR.	Contractors, coolies.	Sirdars' coolies.	Total.	Percentage of sirdars' to con- tractors' coolies.
1881	6,115	2,379	8,794	37·0
1882	7,995	2,907	10,902	36·3
1883	9,875	5,291	15,167	53·5
1884	7,081	10,235	17,316	114·5
1885	4,398	5,709	10,107	129·8

The statistics of free emigration are incomplete, but, so far as they can be ascertained, it appears that 9,113 free emigrants and their dependents entered into local contracts at Dhubrí, and 207 proceeded on their journey without contracting—a total of 9,320, against 12,199 in the previous year.

Six recruiters' licenses were cancelled during the year. No cases of misconduct were reported among garden sirdars.

The history of the Calcutta depôts, in which only coolies recruited by contractors were accommodated during the year, is thus summarised:—

Total number arrived in depôt.		Total number undischarged of last year.		Total number born in depôt.		Total number accommodated in the depôt.		Daily average strength of emigrants in the depôt.		Daily average sick in depôt.		FINAL REJECTIONS.			NUMBER DISCHARGED.		NUMBER DESERTED.		MORTALITY.						Total number forwarded to Goalanda.		Number forwarded to Dhubri.		Total number despatched.		Number remaining at the close of the year.		
												Number			Percentage.							Cholera.		Other causes.		Total.							
												Labourers.			Dependents.							Number.		Percentage.									
												Total.			Total.							Number.		Percentage.		Number.		Percentage.		Number.		Percentage.	
4,943	190	5	4,444	20·07	1·17	80	2	32	0·67	0·04	0·72	386	8·68	274	6·16	5	0·11	9	0·20	14	0·31	3,501	16	3,517	221								

And the following table compares the details of the diminution in number during stay at the depôts with the corresponding particulars for 1884 :—

	FOR THE YEAR			
	1884.		1885.	
Daily average strength	51·59		29·07	
Ditto sick in hospital	1·43		1·17	
	Number.	Percentage.	Number.	Percentage.
Rejections, including relatives	46	0·99	58	1·30
„ excluding „	36	0·75	32	0·72
Discharges	444	8·73	386	8·68
Desertions	349	6·86	274	6·16
Deaths from cholera	11	0·21	5	0·11
Total deaths from other causes	20	0·39	9	0·20

The only noteworthy figures are those showing the mortality at the depôts. The total number of deaths fell from 31 to 14, and the percentage on total strength from ·60 to ·31. There were 309 cases of sickness, against 304 in 1884, but the diseases treated were not so fatal. This is especially noticeable in the cases of cholera and diarrhoea and dysentery. Of 54 cases of diarrhoea and dysentery in 1884, 11 terminated fatally; while in 1885 there were only two deaths in 55 cases. There were nine cases of cholera in 1885, with five deaths; in the preceding year of 12 cases, 11 resulted in death. There were nine cases of measles, spread over four different months, and all occurring in the same depôt. In every case strict isolation was enforced, and the disease was effectively prevented from spreading. The sanitary condition of the depôts appears to have been good throughout the year. There was no overcrowding; and indeed the depôts, originally constructed to meet the requirements of a much larger number of emigrants than is now recruited by the contractors for Assam, afford far more accommodation than is necessary. Good food and good water have been supplied, and the depôt hospitals have been maintained in an efficient state. A special vaccinator was employed in the depôts, and he performed 4,235 operations.

Of the 3,517 contractors' coolies despatched from Calcutta, 3,501 went to Goálánda and 16 to Dhubrí. The Goálánda depôts received 3,751 emigrants during the year, viz., the 3,501 despatched from Calcutta, and 250 sirdari emigrants direct from the recruiting districts. There was a balance of five from the previous year; so the total number to be accounted for was 3,756. Of these, 11 remained in the depôt at the close of the year, and there were 12 casualties, as follow :—

Deserted	3
Died	5
Released	4
	—
	12
	—

The percentage of casualties was only ·31, against ·72 and ·91 in the two preceding years, and they were all among contractors' coolies. The decrease was most noticeable in the mortality, only five deaths (four of cholera) being reported, against 64 (63 cholera) in 1884.

The total number of contractors' coolies finally embarked was 3,499—3,483 at Goálánda and 16 at Dhubrí. Of these, 2,740 were labourers who executed contracts, and the rest dependents. Of the labourers, 2,630 contracted for

three years, and only 110 for five years. The five-year contracts amounted, therefore, to only 4·01 of the whole number. The percentage in 1884 was 8·82.

In 1884 and 1885 the percentages of five-year contracts among emigrants enlisted by garden sirdars and contracting in Bengal were 36 and 34 respectively, while of local contracts (*i.e.*, contracts executed by free emigrants at Dhubrī) 90 per cent. were for five years in 1885, against 76 per cent. in the previous year.

The total number of labourers that embarked at Goálánda under the superintendence of the Embarkation Agent was 3,733. This number is exclusive of sirdari emigrants to Cachar and Sylhet, and of free emigrants who did not pass through the depôts. Two thousand five hundred and forty-three embarked in steamers for Assam—2,293 contractors' and 250 sirdari coolies. Both in respect of mortality and the time occupied in the passage, the statistics of the trips made by these steamers compare favourably with the figures for the previous three years, as the following statement shows:—

	1882.	1883.	1884.	1885.
Total number of trips ...	66	50	40	41
Ditto without cholera ...	62	46	31	40
Ditto souls conveyed ...	3,689	3,908	2,890	2,543
Percentage of total deaths ...	0·73	0·48	0·83	0·27
Average length of passage ...	Days. 16 Hrs. 21	Days. 17 Hrs. 0	Days. 15 Hrs. 18	Days. 15 Hrs. 0
Ditto number conveyed on each trip	55	78	72	62

Cholera was present on only one voyage—that of the *Bengal* in December—when five deaths from the disease occurred. The rest of the emigrants, 1,190 in number, embarked for Cachar and Sylhet in 70 country boats, which, as a rule, accomplished the journey in about 14 days. The decrease in casualties was most remarkable, owing probably to less overcrowding among the smaller number of passengers. In 1884 there were 133 deaths on the voyage, 131 of which were from cholera, and the percentage of mortality was 3·52. In 1885 there were only 15 deaths (11 from cholera), and the percentage was reduced to 1·26. No desertions took place, against 17 in 1884.

The returned way-bills of sardari emigrants by country-boats to Cachar and Sylhet show that the average mortality among them on the voyage was 5·10 per cent. It is hoped that the new subsidised steamer service, opened since the year under report, will do much to reduce this high rate. Some improvement has been effected on the Dhubrī route by the provision of medical aid at two points of the journey.

Percentage of emigrants to population.

The following statement shows the proportion of emigrants of all kinds to the population of their respective districts:—

DISTRICTS.	Number of inhabitants of the district registered.	Total population of the district as per last census.	Rate per million.
Hazáribágh ...	1,108	1,104,742	1·0 2
Gayá ...	1,280	2,124,682	602

Medical Relief.

CALCUTTA MEDICAL INSTITUTIONS.

JUDGED by the death returns, the public health of the town during the year was slightly better than in the previous year. The general death-rate was 29·3 per mille of the population of the town, against 30·5 in the previous year. The number of deaths from cholera was 1,603, against 2,272 in 1884, and was considerably less than the number registered in the past four years. On the other hand, there was a large increase in the number of deaths from diarrhœa and dysentery, the deaths having risen from 1,209 in 1884 to 1,655 in 1885. The mortality from fever slightly increased, while there was a large falling off in the number of deaths from small-pox. The mortality from "other causes" was also lower than in the previous year. The following statement shows the number of cases of the principal diseases treated in the several hospitals in Calcutta during the year, and the number of cases which proved fatal:—

MEDICAL INSTITUTIONS.	CHOLERA.		DIARRHŒA AND DYSENTERY.		FEVERS.		SMALL-POX		OTHER CAUSES.		TOTAL.	
	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.
Medical College	166	94	300	54	531	43	3	4,997	370	5,897	561
Presidency General Hospital	16	8	320	22	167	5	10	2	2,808	61	3,417	106
Mayo Hospital	151	77	265	19	386	27	1	1,511	160	2,564	283
Campbell Hospital	196	132	1,730	787	1,379	162	68	32	4,238	501	7,511	1,614

Voluntary Lock-hospital	414	18	414	18
Total	627	362	3,367	1,035	3,767	276	83	34	16,019	1,229	23,863	2,836

There was a considerable decrease in the numbers of both cholera and small-pox cases treated in the hospitals, the numbers under each of these heads being 627 and 83, against 1,023 and 275, respectively, in the year 1884. In this respect the practice of the hospitals reflects the experience of the general population of the town. The hospital death-rate, however, under both heads was higher than that of the previous year, being 577 and 409 per mille, against 523 and 312 per mille, respectively. The number of diarrhœa and dysentery cases rose from 2,674 in 1884 to 3,367 in the year under review. The total number of deaths per mille of all cases excepting ophthalmic ones was 125·79. Compared with the statistics of the previous year, the total number of in-door patients treated shows an increase of 2,170. The increase was chiefly confined to fevers, bowel-complaints, and venereal disease. Diseases of an asthenic type prevailed largely throughout the year. This is illustrated in a marked manner in the Campbell Hospital return, which shows an accession of 1,086 patients who suffered from disorders generally associated with failure of vital power. With the exception of the Police Hospital, which partakes more of the character of a military hospital, and can in no way be ranked as a charity, all the Presidency hospitals received a larger number of in-patients than in the previous year. Towards the end of the year an unusual number of persons sought admission into the Campbell Hospital, necessitating the erection of a large temporary ward. It is stated that the increase of patients at this hospital was in the main due to distress in the flooded districts and its consequences,

and if this is correct, the crowding should be temporary, and the necessity for the ward should shortly cease. This hospital still holds a number of persons suffering from blindness, and others who should be classed as incurables.

The results of the surgical operations in the Medical College Hospital were more satisfactory than those of the previous year. The number of operations performed in the hospital was 394, of which 30 cases proved fatal, against 416 operations with 52 deaths in 1884. Ophthalmic operations are not included in these figures. There were three deaths from erysipelas during the year. The disease broke out in November, having been imported by the husband of a patient, and spread by infection. Six cases in all occurred, of which three were fatal. Prompt measures were taken to segregate the sufferers and to disinfect the wards in which the outbreak occurred, and to purify the bedding, instruments, and other appliances through which contagion might be communicated. The history of this small outbreak shows that the spread of erysipelas, once the most dreaded and fatal of all forms of hospitalism, is now completely under control, while its specific action can readily be destroyed or rendered harmless by antiseptic surgery and effective sanitary measures. It has been pointed out that the College Hospital, unlike most modern hospitals which are built on some principle of segmentation, is *en bloc*, and that at present scarcely any means exist for segregating infectious cases. This matter has already received the attention of Government, and the Inspector-General has been asked to submit plans and estimates for a suitable ward for cases of this character.

In the Eden Hospital 1,575 women and children were treated, against 1,390 in the previous year. Of these, 1,064 were Europeans and 511 natives. The deaths among the former amounted to 35, and among the latter 32. The number of confinement cases rose from 379 to 432, the mortality among this class of cases being 22, against 29 in 1884. The reduction in the death-rate is satisfactory, as many patients were admitted in a hopeless state. A steam laundry is required, as the present arrangements are defective. An estimate has been called for; but with so many urgent calls upon the Provincial finances, it will be difficult to provide the necessary funds at present.

The total number of cases of enteric and remittent fever treated in all the hospitals during the year was 20 and 803 respectively, against 11 and 930, the corresponding figures of the previous year. Of the 20 cases of enteric (or typhoid) fever, 17 are shown as having been admitted into the Presidency General Hospital, 1 into the Medical College Hospital, and 2 into the Police Hospital. These figures are, however, said to be unreliable owing to the difficulty of distinguishing between enteric and remittent fever, which, as Dr. Cleghorn, the Officiating Surgeon Superintendent of the Presidency General Hospital, remarks, "is due to the imperfect knowledge which we at present possess of the fevers of this country, and to a general belief in the widespread influence and prevalence of malaria." In order to overcome this difficulty, the Inspector-General strongly urges upon all medical officers the importance of a *post-mortem* examination in every case of death from remittent or suspected typhoid fever.

The nursing arrangements at the General and Medical College Hospitals continue to be managed by the Calcutta Hospital Nurses' Institution, under the supervision of the ladies of the Clewer Sisterhood. Drs. Cowie, Coates, Harvey, and Cleghorn all speak in the highest terms of the efficiency of the work done; and the Lieutenant-Governor desires to add his testimony to the valuable services which the institution has rendered to the cause of medical charity in Calcutta.

The invested capital of the Calcutta Hospitals was increased during the year from Rs. 5,53,300 to Rs. 5,54,300. The whole of this increase appertains to the Howrah General Hospital. The total expenditure, excluding the amount invested, was Rs. 4,23,236, which exceeded the amount expended in 1884 by Rs. 9,921. The net cost to Government of all the hospitals, including the voluntary lock-hospitals, which are now entirely supported by Government, amounted to Rs. 2,71,349, against Rs. 2,70,400 in the previous year, inclusive of the cost of lock-hospitals, which was Rs. 16,185 in 1884. There was a total decrease of Rs. 16,057 in the Medical College, Police, and Presidency General Hospitals, and an increase of Rs. 17,006 in the Campbell, Howrah, and lock-hospitals, the total net increase being Rs. 949. The Government grant to the Mayo Hospital has been reduced to Rs. 34,000 from the ensuing year.

CHARITABLE DISPENSARIES.

On the 31st December 1884 there were 230 dispensaries under Government supervision. During the year 1885, seven new institutions were established, while four were closed or removed from the Government list. The total number of dispensaries open at the close of the year under review was therefore 233, against 230 of the previous year. Twenty-four Assistant Surgeons were received by transfer from the Imperial list. Eighteen Civil Hospital Assistants were admitted into the service, of whom seven came from the Campbell Medical School, five from Patná, four from Dacca, and two from Cuttack. It was pointed out to the Government of India that the limit of age for the entrance of Assistant Surgeons into the service of Government should be raised from 25 to 28 years. So long as the limit remained at 25 years it pressed hard on many of the best students, especially those who commenced the study of medicine after taking the degree of Bachelor of Arts. Since the close of the year the Government of India has ordered that the limit of age for the entrance of Assistant Surgeons into the service of Government in Bengal should be raised to 28 years.

Returns have been received from 229 out of the 233 dispensaries, and the following table compares the amount of work done in them during 1884 and 1885 :—

	IN-DOOR.								OUT-DOOR.							
	Under 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 55.	Total.	Under 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 55.	Total.
1885	17	14	20	11	44	19	6	131	3	6	78	77	31	16	16	229
Percentage	12.5	10.29	14.71	8.09	32.35	13.97	4.41	22.1	1.37	2.62	54.06	53.12	21.41	6.99	6.99	22.9
1884	16	14	11	16	41	23	5	132	2	11	68	79	36	17	19	229
Percentage	12.12	10.61	8.33	12.12	31.08	17.42	3.79	22.7	0.87	4.81	51.80	50.69	31.52	7.42	8.30	22.9

The total number of dispensaries which received in-door patients was 136, against 132 in the previous year.

Of these 229 dispensaries, 50 were visited by the Civil Surgeons daily or frequently, 7 more than four times during the year, 11 four times, 21 three times, 23 twice, 53 once, and 14 were not inspected at all. The Inspector-General of Civil Hospitals observes :—

“I have been struck with the real interest in sanitation evinced by the medical officers in charge of the institutions I have been able to personally inspect during the year, and I have no reason to question that the same healthful progress obtains generally elsewhere. Some of the institutions were models of cleanliness. Hygienic arrangements were conducted systematically and intelligently. Civil Surgeons encourage their subordinates in this direction as in all other professional matters; and, judging from practical results, I must say their endeavours have met with no mean success.”

The following table shows the number of patients treated in 1885 and in the previous seven years, and the ratio of mortality among in-patients :—

	In-patients treated.	Out-patients treated.	Total.	Mortality among in-patients, per cent.
1878	28,473	927,783	956,256	20.01
1879	21,847	865,995	890,842	17.78
1880	23,567	888,095	911,662	15.17
1881	23,144	917,534	970,978	15.8
1882	23,468	934,155	957,623	15.75
1883	22,468	915,753	938,221	14.13
1884	25,077	965,555	990,632	14.75
1885	25,766	960,218	985,984	16.59

The total number of patients attending the dispensaries shows a decrease of 4,648 as compared with the number treated in 1884. The number of in-door patients, however, exceeded by 689 that recorded in the previous year.

The total income and expenditure of the dispensaries during the year are shown below :—

<i>Income.</i>				Rs.	A.	P.
Cash balance on 1st January 1885	48,429	0	3
From Government—						
As salaries	13,789	0	5
„ registers and forms	1,352	14	11

Invested during the year	85,368	4	6
Total Expenditure	4,71,942	15	2
Cash balance on 31st December 1885	36,740	12	8

The opening balance on 1st January 1885, as shown above, is less by Rs. 3,207 than the closing balance of the previous year, as given in that year's report. The difference is explained to be due to the closure of one dispensary and the removal of another from the Government list.

The total receipts from Government amounted to Rs. 18,659, against Rs. 18,651 in 1884. Out of the Rs. 18,659, the sum of Rs. 5,043 was contributed to municipal dispensaries. After deduction, however, of the cost of registers and forms, and of diet in police cases, the Government contribution towards municipal dispensaries amounted to Rs. 2,570, against Rs. 3,106 in 1884. Of this, Rs. 2,449 represents salaries of medical officers in the Utterpara and North Suburban Municipalities, and Rs. 121 the cost of repairs to the Purf dispensary. The Government contribution towards dispensaries that are not municipal institutions amounted to Rs. 13,616, against Rs. 12,890 in the previous year.

The receipts from local sources, exclusive of municipal funds, amounted to Rs. 1,18,685, against Rs. 35,906 in the previous year. Of this, municipal dispensaries received Rs. 91,265, against Rs. 9,340 in 1884. The increase was mainly due to the fact that Rs. 68,000 were received in the Monghyr dispensary as sale proceeds of house property belonging to that institution; almost the whole of this sum was invested. The amount of subscriptions from Europeans was Rs. 16,872, and from Natives Rs. 1,06,185. It is to be regretted that the amount of native subscriptions showed a falling off of nearly Rs. 5,000 compared with the previous year. Of these subscriptions, Rs. 40,263

The gross expenditure on dispensaries, exclusive of the amounts invested, was Rs. 3,86,574, against Rs. 3,49,712 in 1884, thus showing an increase of Rs. 36,862. Of this increase, Rs. 25,200 was incurred on account of buildings and repairs. The increase of Rs. 8,633 under the head of establishment should have been explained. Medical stores were obtained from the Government Store Department and from private druggists. Of the 229 dispensaries, the accounts of which were received, 180 obtained their supplies from private sources. The cost of diet was Rs. 39,409, against Rs. 38,894 in the previous year. The average cost of each diet varied from 2 annas 7 pies to 6 pies.

•

On 1st January 1885 the total number of persons in the asylums was 919. During the year 214 persons were admitted and 18 were re-admitted; 93 were discharged cured, 26 were made over to the care of friends, 4 are reported to have been discharged "otherwise," and 73 died. There thus remained 955 persons at the close of the year. The daily average population was 939.62, against 920.96 in 1884. The percentage of recoveries calculated on the mean daily population was 9.89, against 9.77 in 1884.

As usual, much difficulty was experienced in classifying accurately the different forms of insanity. This is perhaps not very material. During the year 80 patients were returned under the head of "acute mania," 80 under "chronic mania," 11 under "melancholia," 17 under "acute dementia," 26 under "chronic dementia," 1 under "idiotey," 2 under "imbecility," and 15 under "not insane." Of the causes of insanity, the chief were, as usual, the excessive use of ganja and intemperance. Fever is said to have led to 7 cases of insanity, 9 cases are attributed to hereditary predisposition, and 5 to epilepsy.

[illegible]

The above figures show a considerable decrease in cases of anæmia and debility in Dullunda. Diarrhoea increased in Dacca; dysentery increased to some extent in Dacca, Patná, Cuttack, and Berhampur. Pneumonia occurred in Dullunda only, and cholera in Berhampur. The decrease in these diseases, as also in phthisis, is a very satisfactory feature in the returns of the year under review. There were comparatively few cases of injuries to lunatics. In Dacca there were 3 cases of simple fracture and 5 cases of contused wounds, while at Dullunda 6 cases of injury were recorded, none of which proved fatal. The Lieutenant-Governor concurs in Dr. Cowie's view that "the absence of injuries of any kind in so many of the asylums is a most gratifying feature, and speaks highly for the great care and humanity exercised over the poor afflicted inmates."

The total number of deaths fell from 87 in 1884 to 73 in 1885. There was a decrease in Dacca and Patná. The mortality increased in the Dullunda Asylum from 18 in 1884 to 27 in 1885. It is explained that in this asylum a considerable proportion of the deaths consisted of old chronic hopeless cases that had been hanging on between life and death for a lengthened period. The Inspector-General remarks that *post-mortem* examinations were seldom neglected. Complaints of overcrowding are made regarding the Dacca and Cuttack Asylums, but arrangements are being made which will relieve the former. At Cuttack, where there is a small local asylum, the urgency is not great. There was abundance of room at Patná and Berhampur.

The following table shows the receipts and expenditure in each asylum during 1885 :—

1	2	3	4	5	6	7	8	9	10	11	12	13
ASYLUM.	Daily average strength.	Total expenditure.	Received from friends of patients.	Actual profit from manufacture department.	Average cost of each patient as per column 5.	Average cost of each patient, deducting columns 4 and 5.	AVERAGE COST OF EACH PATIENT IN RELATION TO:—					
							Establishment.	Diet.	Bazar medicines.	Clothing.	Contingencies.	Other charges.
		Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.

* Loss.

The gross expenditure was Rs. 86,171, against Rs. 91,695 in 1884, showing a decrease of Rs. 5,524 as compared with the expenditure of the previous year. The cost of establishment was Rs. 20,028 and of superintendence Rs. 18,600. The corresponding figures in 1884 were Rs. 19,926 and Rs. 18,520. The Dullunda Asylum is by far the most costly, and arrangements are being made to restrict admissions to this asylum by making more use of the space available at Patná and Berhampur.

The money outlay on account of diet was Rs. 20,613, against Rs. 21,187 in 1884, showing a decrease of Rs. 574. The value of articles of diet made over from the manufacturing departments during the year was greater than that of the previous year; the average cost of a lunatic's daily diet was, as in the previous year, one anna and six pies. The cost on account of clothing and bedding was Rs. 3,103, against Rs. 2,579 in 1884. The expenditure on account of manufactures amounted to Rs. 29,248, being Rs. 2,705 more than that of the previous year.

The European Asylum at Bhowanipur is not included in the foregoing paragraphs. The number of patients in this asylum at the beginning of the year was 31, viz., 16 males and 15 females. During the year 20 persons were admitted, of whom 12 were males and 8 females. Of these, 19 were from the civil population and one a soldier; of the 51 persons under treatment, 3 were discharged cured, 3 were despatched to Europe under

the Merchant Shipping Act, 12 were made over to the care of friends 3 were sent to Europe as still insane, and 1 died. At the end of the year there remained in the asylum 29 persons, of whom 13 were Europeans, 14 East Indians, and 2 Armenians. The total expenditure amounted to Rs. 19,731, against Rs. 19,804 in 1884. The total amount contributed by the friends of paying patients was Rs. 12,338.

LOCK-HOSPITALS.

The general results of the working of the four cantonment lock-hospitals in Bengal during the year are exhibited in the following table:—

NAME OF CANTONMENT.	Area in which the rules are in force.	Estimated native population within the area.	Average strength of European troops.	Average number of prostitutes on the register.	Number reported to Cantonment Magistrate and other authorities for non-attendance.	Number of women found diseased and admitted into hospital.	NUMBER OF MEN FOUND DISEASED AND ADMITTED INTO HOSPITAL.				Number of admissions of men per 1,000 of average strength.	Total expenditure.
							Syphilis.	Gonorrhoea.	Other diseases.	Total.		
Dinapur ...	4 miles ...	91,169	920	70.93	12	704	100	102		202	219.80	2,482 12 0
Barrackpur ...	5 miles ... round cantonment on the Barrackpur side of the river	28,144	206	31.32	33	47	15	25		40	134.17	1,347 5 6
Pune-Dum ...	24 square miles	32,853	688	29.66	16	66	85	145	8	238	345.94	1,433 7 0
Darjiling ...	7½ ditto	8,190	214	6	...	25	21	17		10	186.91	577 12 10

The results on the whole do not differ materially from those shown in the reports for the previous year, and there is still room for much improvement. Sufficient precautionary measures are provided in the rules, which, if rigidly enforced, ought to be productive of better results.

The number of in-patients treated in the voluntary lock-hospitals during 1885 was 414, against 333 in 1884, showing an increase of 81. The daily average number of patients treated was 90, against 61 in the previous year. This shows that each patient on the average continued in the hospital 79 days in 1885 and 68 days in 1884. Of the total number of in-door cases, 48 were Europeans and Eurasians and 366 natives. Ninety-three patients, viz., 48 Europeans and Eurasians and 45 natives, were treated in the Scaldah Lock-hospital, against 111, or 38 Europeans and 73 natives, in the previous year. Three hundred and twenty-one patients (natives) were treated in the Alipore Lock-hospital, against 222 in 1884. The total number of admissions was 342, of which 100 were received on transfer from the Campbell Hospital. The corresponding numbers in 1884 were 279 and 75. There were 18 deaths among the native in-door patients, or a rate of 4.9 per cent. on total cases treated, against 21 and 6.3 per cent. in the preceding year. There were treated in the hospitals 1,889 out-door patients, against 1,454 in 1884, the daily average number being 6.5 and 5.9 respectively. Of the total number of out-door cases, 39 were treated in the Scaldah Lock-hospitals, against 50 in 1884. Altogether 1,850 patients were treated in the Alipore Lock-hospitals, against 1,404 in the preceding year. Many cases of venereal disease are still treated at the other hospitals to the detriment of the patients of other classes for whom those institutions are chiefly intended. The Inspector-General will be requested to instruct the Principal of the Medical College and Superintendents of other hospitals to transfer as many patients as they can to the voluntary hospitals.

CHEMICAL EXAMINER'S DEPARTMENT.

The office of Chemical Examiner was held by Dr. L. A. Waddell for the greater part of the year. He was relieved in the middle of November by Dr. C. J. H. Warden, who had been absent for eighteen months on furlough.

The following table shows the general nature of the work done during the year compared with that of the two preceding years :—

Analyses.	1st April to 31st December 1883.	1884.	1885.
<i>Medico-legal—</i>			
Human viscera tested for poison ...	127	217	234
Animal ditto ...	76	137	193
Substances suspected to be, or to contain, poison, including cattle-poison ...	316	787	780
Articles tested for blood stains ...	143	148	205

In addition to the above, eight special opinions were furnished on technical matters during the year, and two memoranda on the Petroleum Bill and the Explosives Act.

In the analytical work there was a decrease of 406 cases as compared with the previous year. The decrease was specially noticeable under the heads of “Opium,” “Salt,” and “Spirit for deleterious adulterations.” It was explained by the Examiner that in the report for 1884 the physical examination of 171 balls of opium was included in the list of analyses performed, whereas the cakes had only been handled to ascertain their freedom from grubs, &c. The decrease under the head of “Spirit for deleterious adulterations” was due to the fact that in 1884 an exceptionally large number of samples were examined for the Excise Commission, which represented work out of the usual routine of the department. Dr. Warden furnished an interesting report on the analysis of Australian and Kashmir wines. He writes: “The Kashmir clarets compare most favourably with the imported clarets; and when we are acquainted with the extent to which French wines are adulterated, it becomes a matter of surprise that our locally manufactured wines are not largely used; but, as a matter of fact, probably 99 out of 100 consumers of claret in India have never heard of Kashmir claret.”

During the year under review 234 human viscera were examined, against 217 in 1884. Of these, poison was detected in 107 cases, giving a percentage of 45·72, against 38·25 in the previous year, the corresponding average of the past ten years being 42·6. It is satisfactory to notice the decrease in the number of autopsies conducted by Civil Hospital Assistants. In 1882-83 they performed 49 per cent. of the *post-mortem* examinations; in 1883, 14·9 per cent.; in 1884, 6·9 per cent.; and in 1885, 6·8 per cent.

Seven hundred and eighty articles suspected to be, or to contain, poison were submitted for examination during the year. Out of these, 394 were found to contain poison, giving a percentage of 50·5, against 47·7 and 33·4 in the two preceding years. One hundred and ninety-three animal viscera were examined, against 137 in 1884 and 76 in the nine months of 1883. Poison was detected in 142 cases, and in all these, as in the previous year, death was caused by arsenic poisoning.

The Chemical Examiner reported that there was some improvement in the manner in which accounts of *post-mortem* examinations were submitted to him during the year, as well as in the mode of packing parcels containing articles for analysis. It is creditable to Dr. Warden that during a considerable period of his furlough in Europe he devoted himself to investigations on Indian indigenous drugs, and that he can report, after communication with Dr. Stevenson, the Official Analyst to the Home Office in London in medico-legal cases, that the rules for the guidance of medical officers in similar cases here, and the medico-legal return forms in use in Bengal, are excellently adapted for their purpose.

Sanitation.

THE year under report was generally unhealthy, cholera and fevers having prevailed to a greater extent than in the previous year. A characteristic feature of the year was the heavy inundations, caused by the abnormal rainfall in different parts of the province, the registered average rainfall being 70·24 inches against 66·81 inches, the average of previous years. The effects of the inundations were of a twofold character. On the one hand they proved a calamity by destroying and damaging the agricultural outturn wholly or partially, and by causing heavy loss of cattle: while on the other hand they exercised a great power for good by diminishing sickness in the great majority of the localities in which they prevailed. The prices of food-grains, especially common rice, the staple food of the poorer classes, ranged high, and gave rise to much distress, which re-acted unfavourably on the public health. The districts which suffered most in this respect were Bardwán, Midnapur, Murshedábád, Rájsháhí, Bogra, Gya, Sháhábád, Durlhunga, Cuttack, Balasor, and the Santál Pergunnahs. In several of these relief works had to be opened by Government or the District Road Committees.

Cholera, which had in the previous year prevailed to a very great extent, and contributed largely towards the mortuary statistics of the province, prevailed with still greater severity and was more fatal in its effects during the year under report. The recorded deaths numbered 173,767, or a ratio of 2·62 per mille of population, against 134,421, or a ratio of 2·03 per mille in 1884. The disease visited every district, and attacked altogether with more or less severity 29,239 villages. The districts which suffered most were Bírghúm (6·87), Maldah (6·17), Purí (5·98), Rájsháhí (5·78), and Cuttack (5·74). The details recorded of the several outbreaks of cholera during the year in different parts of the province throw no new light on the etiology of the disease. The localities affected were invariably found to be in an insanitary condition, the water-supply impure and insufficient, and the inhabitants frequently predisposed to disease, being enfeebled by exposure, insufficient clothing, and scanty and unwholesome food. Cholera was unusually active at the large religious and other fairs, where great numbers of people are gathered together, especially at the RUTHJATRA festival at Purí, and at Sudagbagh in Murshedábád in June and July, where 277 and 125 deaths respectively occurred. The usual precautions are said to have been taken, but were apparently defective. The following observations regarding the seasonal incidence of cholera are worthy of notice, as indicating the extent to which the disease was influenced by the rainfall during the year:—

“After the scanty rainfall of January and February, the mortality from cholera suddenly rose very high in March. April and May followed the usual rule of being months in which the severity of the disease is very great. In June and July, months of heavy rainfall, the mortality subsided considerably, as has been usually the case. August, usually a month of low mortality, exhibited, notwithstanding its great rainfall of 17·81 inches (the largest quantity of the year), the highest mortality. This was caused by the incidence of the disease in the Behar districts, which are visited most severely in the rainy season. In August and during the early part of September heavy inundations occurred over a great portion of the province, and this contingency was followed by a steady reduction in cholera mortality during the months of September, October, November and December, and thus the winter prevalence of the disease, which is often the severest, was mitigated.”

The recorded number of deaths from small-pox fell from 18,533 in 1884 to 9,863 in the year under report. More than 75 per cent. of the mortality was among infants and children. The disease was most prevalent in the towns of Dacca, Bettíá, and Ráuíganj, and some parts of Champáran, where the casualties exceeded 2 per mille of the population.

Fevers prevailed to a very large extent during the year under review, and, judging from the statistics, proved more fatal than in any year within the past decade. The recorded mortality from this cause was 1,042,142, or a ratio of 15·75 per mille of the population under registration, against 966,233, or a ratio of 14·60 per mille in 1884. The increase, however, in the recorded number of deaths is attributed to improvement in registration. The districts in which the deaths assigned to this head were most numerous were—Nadiyá (26·85), Monghyr (25·65), Pabná (25·63), Rájsháhí (24·03), Jalpáigurí (23·71), Bhagalpur (23·13), Rungpur (22·72), Jessor (21·44), and Bogra (21·21).

The mortality from “bowel-complaints,” “injury” and “other causes” during the year amounted to 63,808, 28,956 and 186,209 respectively, against 58,376, 24,674 and 176,373, the recorded mortality under these heads in the previous year. The increase under “bowel-complaints” is attributed to improvement in registration, and is not regarded as an indication of the increasing severity of the maladies classed under this head.

The percentages of municipal income expended on sanitary works and roads during the year were 40 and 17 against 38 and 19 respectively in the previous year. The towns in which the largest proportion of municipal income was devoted to sanitary improvements were Hazáribágh, Dacca, Midnapur, Jessor, and Bardwán. Some attention was devoted during the year to improvements in water-supply. The Bardwán water-works have now been completed, and the same may also be said of the water-works at Bhagalpur. Complaints having been made regarding the impurity of the drinking water supplied at several of the stations on the Eastern Bengal State Railway, the matter was enquired into, and arrangements are now being made for the supply of good drinking water at these places. Schemes for the improvement of drainage were devised and, in some instances, undertaken during the year, but very little appears to have been done in this direction in comparison with the drainage works executed in the previous year.

Vaccination.

THE Vaccination Department continued to work satisfactorily. The number of operations performed during the year was 1,368,996, against 1,488,296 in the previous year. The decrease of 119,300 is attributed partly to the paucity of unprotected subjects in the areas in which the Government agency was employed, and partly to the inefficient manner in which the work was carried on by the municipal agency. The following table shows the number of operations performed in each circle of vaccination and in the municipal area during the year :—

CIRCLES.	TOTAL NUMBER OF VACCINATIONS PERFORMED.		DIFFERENCE IN 1885-86.	
	1885-86.	1884-85.	Increase.	Decrease.
Calcutta	12,365	15,955	3,590
Metropolitan Circles	373,347	366,139	7,208
Suburbs of Calcutta, including operations in Central Vaccination Depot	14,644	19,781	5,137
Total of Metropolitan Circles	387,991	385,920	7,208	5,737
Darjiling Circle	252,562	229,560	23,002
Ranchi	126,426	148,972	22,546
Natal Pergunnahs	114,539	123,048	8,509
Eastern Bengal	286,042	307,079	111,047
Orissa	57,681	46,071	10,710
Bohar	47,173	64,755	7,577
Total of Vaccination Circles	1,284,174	1,402,260	40,920	158,086
Municipalities, dispensaries, &c.	84,822	86,036	1,214
GRAND TOTAL	1,368,996	1,488,296	40,920	160,220

The provisions of the Compulsory Vaccination Act were extended to the Chattra, Muzafferpur, Serājganj and Arrah Municipalities. It is to be noticed that less resistance is now being offered to vaccination, and that during the year under report many of its most powerful opponents were led to accept it. The operations performed with bovine lymph were not as successful as in the previous year, but the lymph is still favourably reported on. The failure of the virus is attributed to defects in storing it in tubes. A fact which the experience of the year has disclosed is that the lymph, if stored and used after the cold weather has well set in, generally succeeds.

The total expenditure on vaccination during the year amounted to Rs. 1,66,711-8-9, of which Rs. 76,709-8-10 represents the cost of the operations performed by the Government vaccinators, Rs. 78,847-14-8 the cost of the establishment employed for supervising the operations of the Licensed Vaccinators, and Rs. 11,154-1-3 the cost of vaccination to municipalities. Besides this, about Rs. 600 were received as private contributions and expended in aid of the work. The average cost of each successful operation performed during the year was 2 annas, against 1 anna and 8 pies in the previous year.

VII.—INSTRUCTION.

Education.

THE following table shows the advance made in schools of all kinds which submit returns to the Department:—

CLASS OF INSTITUTIONS.					YEAR 1884-85.		YEAR 1885-86.		Average number of pupils, 1885-86.
					Schools.	Pupils.	Schools.	Pupils.

GRAND TOTAL ...					72,641	1,470,180	57,533	1,358,029	

The most noteworthy fact in the educational history of the year was the disappearance from the returns of the Department, and the removal from departmental control, of 15,108 schools and 112,151 pupils. This important result was the outcome of a policy under which the Government declared that no primary school should be recognised as eligible for rewards unless it had been in existence for six months, could produce ten pupils, used printed books in its ordinary course, and brought to the place of examination attendance and inspection registers properly kept.

In all classes of schools, other than lower primary, satisfactory progress was made, especially in English schools, both high and middle, and in the upper section of primary schools.

The actual receipts and expenditure of the Education Department were in very close accordance with the revised estimates published in the Financial Resolution of Government, dated the 31st August 1886. In 1884-85 the sanctioned expenditure was Rs. 34,07,000, and the actual expenditure Rs. 34,00,000. The estimates for 1885-86 were originally fixed at Rs. 33,87,000, and were reduced after the beginning of the year to Rs. 33,07,000. A still further saving of Rs. 22,400 was subsequently effected on this reduced estimate. Receipts, however, fell short of the estimate of Rs. 5,68,000 by Rs. 29,400, so that the net Government expenditure exceeded the estimate by Rs. 7,000. The chief savings in expenditure were effected under the heads of primary education and Government colleges, general and professional. The chief falling off in receipts was under the head of municipal contributions to Government schools, which were estimated at Rs. 20,000, but realised only Rs. 6,600. Taking into account, however, schools under private as well as under public management, the contri-

butions of municipalities towards their support have risen from Rs. 71,400 to Rs. 74,600, of which Rs. 6,600 were paid to schools under departmental control, Rs. 11,100 to schools managed by Municipal Boards, and Rs. 56,900 to schools under private management.

The expenditure of the Department from all sources, public and private, during the last two years, is shown in the subjoined table, which is taken from the departmental returns. It includes charges for medical education and for buildings, which are not included in the educational estimates, and the totals consequently differ from those given in the last paragraph :—

			YEAR 1884-85.		YEAR 1885-86.	
			Government expenditure (net).	Total expenditure.	Government expenditure (net).	Total expenditure.
			Rs.	Rs.	Rs.	Rs.
University	31,000	81,000
Collegiate	3,27,000	5,62,000	3,15,000	5,47,000
Secondary	5,82,000	24,35,000	5,85,000	25,01,000
Primary	6,51,000	27,18,000	5,87,000	24,53,000
Female	1,39,000	4,77,000	1,44,000	5,03,000
Special	4,14,000	5,60,000	4,11,000	5,53,000
Scholarships	1,64,000	1,85,000	1,68,000	1,94,000
Buildings	1,92,000	2,29,000	1,12,000	1,19,000
Furniture and apparatus	8,000	9,000	8,000	9,000
Miscellaneous	1,06,000	1,09,000	1,11,000	1,37,000
Superintendence	4,97,000	5,00,000	5,49,000	5,51,000
			30,80,000	78,15,000	29,90,000	76,48,000

Government expenditure decreased by Rs. 90,000 owing to the reductions effected during the year, and the total expenditure by Rs. 1,67,000 owing to the exclusion of 15,000 small schools from the returns. There was a decrease of Rs. 12,000 under collegiate education, of Rs. 64,000 under primary instruction, and of Rs. 80,000 under buildings. The only large increase in Government expenditure was under the head of Superintendence, and it arose from the increase of the salary of third grade Sub-Inspectors from Rs. 30 to Rs. 50, and the appointment of Assistant Inspectors for the Bardwán, Dacca, and Rájsháhí Divisions. There was an increase in the fee receipts of the Department by Rs. 13,000, which, however, was counterbalanced by a loss of Rs. 13,500 in college fees, due to the temporary withdrawal of second and fourth year students after the completion of their two years' course. This resulted, as in the previous year, from the recent change in the date of the University examinations, the effect of which has now ceased.

The proportion of the Government expenditure on education to its total cost was 39·1 per cent., a slightly smaller percentage than in the previous year.

The returns of attendance for the year were satisfactory, and an increased average shown in nearly all classes of schools. In high English schools the attendance of scholars was 81·4 per cent. of the roll number; in middle schools, English and vernacular, it remained nearly constant at 78 and 77 per cent.; and in upper primary schools it was nearly 82 per cent. In lower primary schools there was an improvement from 81·2 to 84·2 per cent.

The following table gives a classification of pupils during the last two years according to the stage of educational progress reached :—

STAGE.		NUMBER OF PUPILS.		Increase.	Decrease.
		1884-85.	1885-86.		
High	...	11,335	13,375	2,040
Middle	...	36,223	38,819	2,096
Upper primary	...	69,823	75,573	5,750
Lower	able to read printed books	745,765	718,414	27,321
"	not able to read printed books	671,759	473,644	98,115
Total		*1,434,905	†1,319,355	9,886	125,436
				Net	115,550

* Exclusive of 314 pupils whose returns were not furnished.
Ditto of 194 ditto ditto ditto.

In the high, middle, and upper primary stages of instruction there was a sufficient and satisfactory increase. The large decrease in both sections of the lower primary stage was due to the exclusion from the returns of schools with less than ten pupils. One per cent. of all the boys at school in Bengal were in the high stage, that is, were preparing to go up for the Entrance examination within two years; three per cent. were in the middle, and six per cent. in the upper primary stage. Rather more than half the total number of pupils were in the higher section of the lower primary stage. The percentage of pupils not reading printed books, which had fallen in the previous year from $43\frac{1}{2}$ to 40, has again fallen to 36.

The following measures have been taken by Government to carry out the chief recommendations of the Education Commission. The papers relating to a proposal for giving increased aid and support to Sanskrit *toles* have been published for general information. The inspection and examination of primary schools *in situ* is being carried out to the utmost extent possible with the present limited agency. The position of the subordinate inspecting officers has been much improved, and some additions have been made to their number. In the field of secondary education the proposal to establish an alternative standard at the Entrance examination, in the future interests of technical instruction, has been referred to the University. On the 1st May 1887, the Berhampur and Midnapur Colleges will be transferred with specified grants to private management, or, in default of any suitable offer to take them over, will be closed. The Midnapur College will be transferred to the local municipality, and it is anticipated that proposals will shortly be made from more than one quarter to take over the management of the Berhampur College. A college under private management has recently been opened at Narail in Jessor, in connection with the successful high school long established there; and an additional grant-in-aid of Rs. 160 a month has been sanctioned for the support of the college classes. In matters relating to the internal administration of the Department, the recommendation of the Commission that native gentlemen of approved qualifications should be employed as Inspectors of Schools has been carried out by the appointment of Baboo Radhika Prasanna Mookerjee to officiate as Inspector of the Presidency Circle, and by his promotion to the superior grades of the Department. The education of Muhammadans received careful attention, and sanction has been accorded since the close of the year to the creation of 20 special scholarships awardable to Muhammadan students on the results of the Entrance, of 20 on the results of the F.A., and of two on those of the B.A. Examination. The proposal to appoint two Muhammadan Assistant Inspectors on salaries of Rs. 200 to Rs. 300 a month is under consideration. The rules published under the Local Self-Government Act, in order to provide for the transfer to District Boards of the allotments for primary education and primary scholarships within the area under their control, of the grant-in-aid allotment for certain classes of schools, and of the net grants to all Government schools that are placed under the direct management of the Board, are now in force in the 16 districts to which the Act has been applied. Assistant Inspectors of Schools for the Bardwán, Dacca, and Rájsháhí Divisions were appointed during the year. Every division in Bengal has now a Joint or Assistant Inspector of its own, acting under the orders of, and in close communication with, the Circle Inspector.

There was a great improvement in the amount of work done by Deputy Inspectors. Only nine officers out of 43 were on tour less than 150 days, the prescribed term for such officers. There was some decline in the number of days spent on tour by Sub-Inspectors. The prescribed term of 200 days was exceeded in six divisions of Bengal; but in other divisions the days spent on tour were less than the prescribed term.

The employment of chief gurus or of inspecting pundits, or of some combination of the two, as a subordinate inspecting agency, was in force in almost every district which had a large number of primary schools.

The number of colleges increased from 25 to 26, owing to the opening of a small college class in connection with St. Paul's School, Dárfing. The number of students on

the rolls of all colleges was greater on the 31st March 1886 than at any previous time, advancing during the year from 2,779 to 2,998.

The total annual cost and the cost to Government of each student in Government colleges fell from Rs. 366 to Rs. 354, and from Rs. 269 to Rs. 267 respectively. There is a similar decrease in the returns of private colleges generally, except in the Doveton, where the cost of each student to Government has risen from Rs. 57 to Rs. 125, the Government grant having been slightly raised, while the average attendance has fallen one-half.

At the First Arts examination, Government colleges passed 58 per cent. of their candidates in each year 1885 and 1886; from aided colleges, 40 per cent. passed in 1885 and 45 per cent. in 1886; and from unaided colleges, 39 per cent. passed in 1885 and 49 per cent. in 1886. In the number of candidates passed in the first division the Government colleges took the highest place, especially the Presidency, Húglí, and Dacca Colleges. The Metropolitan Institution, and the General Assembly's, St. Xavier's and Free Church Colleges followed close behind. The Jagannath College of Dacca passed eight candidates at this examination in 1885, and 28 in 1886.

At the B.A. examination of 1885, 242 candidates out of 341 passed, or 72 per cent.; at the examination of 1886, 396 out of 712 passed, or less than 56 per cent. The less favourable result of the latter examination is explained by the large increase in the number of B.A. candidates in that year. The First Arts examination of June 1884 was the last under the old system, and an exceptionally large number of candidates (487 in Bengal) was declared to have passed. Six months later a supplementary examination was held for those who had failed, and the number of successful candidates was still further increased by 290, or 777 in all. These were examined for the B.A. degree in April 1886. The Presidency College passed 40 B. A.'s with honours, of whom 16 were in the first division. The Metropolitan Institution and the Dacca College each passed 14 with honours and five in the first division; the Patna College passed nine with honours.

The first examination for the M.A. degree under the new regulations was held in November 1885. There was a marked decrease in the number of candidates, which fell from 71 in 1884 to 43. The standard for the M.A. degree was considerably raised in correspondence with the revised standard for honours in the B.A. examination; and those who took the B.A. degree under the old regulations in many cases found the new M. A. standard too high for them. Of the 43 candidates, 30 were successful. Of these, the Presidency College claimed 16, the Metropolitan and General Assembly's Colleges four each, the Patna College three; while one or two passed from St. Xavier's and the Sanskrit Colleges.

The following statement shows the number of high English schools for native boys, and of pupils attending them, for the last two years:—

High English Schools for Boys.

	1884-85.		1885-86.	
	Schools.	Pupils.	Schools.	Pupils.
Maintained by the Department ...	51	14,401	52	14,963
Ditto by Municipal Boards ...	2	490	4	929
Aided by the Department or by Municipal Boards ...	123	18,167	130	19,705
Unaided ...	63	18,650	69	20,719
Total ...	239	51,708	255	56,316

The aided school in the new district of Khoolna was converted into a Government institution. The number of Government schools was raised to 52. The Municipalities of Bally in the Húglí district and of Nattore in Rájsháhí took over the management of the high schools at those places. There was also an increase of seven aided schools and six unaided schools.

There was a serious decline in the proportion of successful candidates at the last two Entrance examinations of the University. The percentage of success

fell from nearly 54 in 1884 to 36 in 1885 and to 28 in 1886. The decline affected all classes of schools and all provinces alike; it attracted considerable public attention, and the University appointed a Committee to enquire into the subject. The Hare School headed the list of collegiate schools as usual; but in the examination of 1886 the Rájsháhí Collegiate School advanced from the sixth place to the second, displacing the Hindu School from the position which it occupied for many years. The next in order were the collegiate schools at Dacca, Patna, and Húglí. Among zillah schools the highest places were taken in 1885 by Comilla, Chupra, Barísál, and Bírbehún, and in 1886 by Barísál, Bhagalpur, and Comilla. The Maimansingh School, in former years the strenuous competitor for the first place with Barísál, fell to a comparatively low position on the list. In both these places schools under private management have been for some years successfully maintained. The Gya and Chupra schools drew no portion of their net grants during the year, the income from fees and subscriptions being sufficient for their maintenance. The Howrah school obtained a very high place at the examination, but the attempt to work it without a net grant has failed, as in previous years. There are many schools under private management in the neighbourhood, and the question of retaining this school as a Government institution is under consideration. The new zillah school at Khoolna made a fair start by passing five candidates at the examination. From the Ránci School a genuine Kol boy passed the Entrance examination in 1885, and gained a junior scholarship.

The following table gives the comparative statistics of middle English schools for native boys for the last two years:—

Middle English Schools for Boys.

	1884-85.		1885-86.	
	Schools.	Pupils.	Schools.	Pupils.
Maintained by the Department	7	924	11	1,354
Ditto by Municipal Boards	1	280	3	608
Aided by the Department or by Municipal Boards	532	37,215	547	38,154
Unaided	155	9,295	155	10,258
Total	695	47,714	716	50,374

There was an increase of four Government and two municipal schools. There was also an increase of 15 aided schools, which is explained as follows:—Ten middle vernacular schools were raised, and one high school was reduced to this class, while 26 unaided schools received grants. On the other hand, two middle English schools were reduced to vernacular, and five were raised to high English schools, while the grants were withdrawn from 14, and one aided school was taken over by a municipality.

The comparative statistics of middle vernacular schools are given below:—

Middle Vernacular Schools for Boys.

	1884-85.		1885-86.	
	Schools.	Pupils.	Schools.	Pupils.
Maintained by the Department	180	10,474	179	9,508
Ditto by Municipal Boards	9	1,411	9	1,417
Aided by the Department or by Municipal Boards	819	47,872	857	47,166
Unaided	102	6,221	96	5,853
Total	1,140	66,011	1,141	63,944

There was a loss of one departmental school, due to the addition of an English class to a vernacular school, in Orissa; the place of three other vernacular schools similarly raised being supplied by three new schools. There was a gain of eight aided schools, and a corresponding decrease of six in the number of unaided schools.

The results of the examinations of candidates from middle schools, English and vernacular, for the middle scholarship certificate, were satisfactory. In 1884-85, 7,540 candidates appeared, of whom 654 obtained the middle

316

English and 3,115 the middle vernacular certificate, or 3,769 in all. In 1885-86, 6,656 candidates appeared, of whom 590 gained the middle English and 3,111 the middle vernacular certificate, or 3,701 in all. The number of candidates was smaller by 884 than in the previous year, when, owing to the change in the date of examination, the session consisted of 17 months, but the number of successful candidates was only 68 behind. At the examination of 1885-86, pupils of middle English schools gained 569 English and 582 vernacular certificates, while those from middle vernacular schools gained 21 English and 2,529 vernacular certificates.

The following statement illustrates the progress of primary schools (excluding European schools) during the year under review :—

				1885-86.		1886-87.	
				Schools.	Pupils.	Schools.	Pupils.
UPPER PRIMARY SCHOOLS.							
<i>Under public management.</i>							
Maintained by the Department		22	753	20	712
Ditto by Municipal Boards		6	201	6	175

Total				2,720	100,715	3,080	113,336
LOWER PRIMARY SCHOOLS.							
<i>Under public management.</i>							
Maintained by the Department		8	152	9	121
Ditto by Municipal Boards		20	489	20	472
<i>Under private management.</i>							
Aided by the Department or by Municipal Boards				56,885	1,012,239	40,032	869,116
Unaided	5,947	78,985	7,562	116,451
Total				62,860	1,121,865	47,623	986,160
GRAND TOTAL				65,580	1,222,580	50,703	1,099,496

The disappearance from the returns of the Department of 14,877 schools of this class and of 123,084 pupils has been explained in an earlier paragraph as arising from the exclusion of patshalas that have less than 10 pupils each, or that have existed for less than six months. Small schools have been most numerous in the Patna Division, and it is there that the greatest loss has been incurred. There was a considerable advance in the number and the efficiency of upper primary schools, which marked the highest point yet reached in primary education. These show an increase of 360 schools and of 12,621 pupils. The results of the upper primary scholarship examination were also good. Of 7,961 candidates, 4,092 passed the examination from 1,804 schools; while in the previous year, of 6,002 candidates, 2,953 passed from 1,223 schools. In the lower primary scholarship examination there was a serious decline, only 20,018 pupils having passed the examination, against 21,500 in the previous year. This loss was undoubtedly due to the general reduction in the number of primary schools, many of which, though small, must have contained pupils good enough to pass the scholarship examination.

The number of training schools was 25, as in the previous year. There was some increase both in the number of pupils and in the number of those who gained certificates at the vernacular mastership examination. The Dacca school did remarkably well, passing 95 out of its 102 pupils; the Rungpur school also advanced. The Calcutta and Húglí schools were less successful than in the previous year. The Calcutta training school was removed in January 1886 to more spacious

quarters. The English department of the Patna training school was abolished, as its cost was judged to be out of proportion to its utility. The guru training classes did useful work, and 181 gurus received certificates during the year. The outturn of these classes was, however, far below the requirements of the province, and shortly before the close of the year an arrangement was sanctioned for training 500 gurus annually in classes to be attached to middle schools, at an annual cost of Rs. 6,000.

The number of law schools increased from eight to ten, owing to the opening of law classes in connexion with the Ripon and Jagannath Colleges. The total average attendance for all schools was 947, against 765 in the preceding year. At the University examination 119 candidates qualified for the degree of Bachelor of Law, against 77 in the previous year.

The total number of students in medicine declined from 804 to 752. There was, however, a large increase in the Calcutta Medical College and the Campbell School at Sealdah; but the attendance at the Patna Medical School fell from 151 to 92—a result ascribed to the backwardness of middle education in Behar, and the consequent difficulty of keeping up a supply of students who have passed the middle scholarship examination. From the Calcutta Medical College, 14 candidates passed the first and 28 the final University examination; three native *daïs* and five pupil-nurses also received certificates of qualification in midwifery. The hostel for female students of medicine, which has been constructed from the munificent gift of Rs. 1,50,000 made by Her Highness the Maharani Sarnamayi, is now complete and ready for occupation. It has been decided that girls shall be eligible for admission to the Medical College after passing the University Entrance examination; and that, on passing the college examination after a three years' course of classes and practical instruction, they shall be entitled to certificates qualifying them to practice medicine, surgery, and midwifery. A grant of Rs. 3,000 was sanctioned by the Lieutenant-Governor for furnishing the hostel, and Sir Walter deSouza contributed a sum of Rs. 2,400 for the provision of scholarships. From the medical schools at Dacca, Patna, and Cuttack, 37, 33, and 8 students, respectively, passed the final examination qualifying them for employment as civil hospital assistants.

The Engineering College at Sibpur contained on the 31st March 1886 52 and 104 students in the Engineer and Apprentice Departments respectively, against 42 and 107 in March 1885. Of six candidates for the University license in engineering, three passed. Of 13 apprentices, 12 passed the final examination and entered upon their practical course. These last have no difficulty in obtaining employment, partly owing to the excellent workshop training they received.

The three survey schools at Dacca, Patna, and Cuttack contained on the 31st March 1886 201 students, against 156 the year before. At the final examination, out of 72 second-year students, 61 passed and obtained certificates. These schools are uniformly popular and successful, and the passed students find good employment without difficulty.

The School of Art in Calcutta suffered a serious blow in the death of Mr. H. H. Locke, who during the many years of his Principalship laboured to raise the institution to a high point of excellence. He was succeeded by Mr. Schaumburg, whose services promised to be of great value to the school, especially in the development of industrial art; but he also unhappily died very shortly after his appointment. The institution was then placed, pending the appointment of a Principal from England, in charge of the Assistant Principal, Signor Ghilardi. Progress is being made in the wood-carving and metal chasing classes, to which a more practical turn has been given. The modelling class, though the attendance is small, promises well; and a new development is likely to be given to this class in the production of a series of ethnological models of the kind that attracted so much attention in the Colonial and Indian Exhibition held in London in 1886. The resuscitation of Indian decorative art is also being attempted, though the class is not as yet very popular.

There are eight industrial schools in Bengal, four of which received grants from Government, and two from the municipalities of Murshedábád and Berhampur. The Maisadal technical school at Midnapur has recently received a grant of Rs. 50 a month.

Female education.

The following table shows the advance that has been made in female education during the year :—

				1884-85.		1885-86.	
				Schools.	Pupils.	Schools.	Pupils.
<i>Girls' Schools.</i>							
Maintained by the Department	2	186	2	201
Ditto by Municipal Boards	4	160	4	159
Aided by the Department or by Municipal Boards	2,168	37,662	2,043	39,215
Unaided	135	2,789	242	3,746
Total				2,309	40,797	2,296	43,321
Girls in boys' schools	35,749	34,716
GRAND TOTAL				2,809	76,546	2,296	78,037

Of these schools, three were high English, four middle English, 15 middle vernacular, and 274 upper primary. The rest were lower primary schools, mostly aided from the primary grant, at an average cost to the State of Rs. 18 a year.

The total cost of female education in Calcutta was Rs. 2,95,842, of which Government contributed Rs. 1,07,216. The Bethune School had 142 pupils in the lower and five in the Upper or College Department. One girl passed the Entrance examination from this school, and two the B.A. examination—one of them, Miss Kamini Sen, taking honours in Sanskrit. Two young ladies from other institutions not included in the foregoing table, namely, the Doveton and Free Church Normal School, passed the First Arts examination. From the Eden Female School at Dacca one candidate passed the Entrance examination. The third high school is the Christ Church Girls' School in Calcutta, ably managed by Miss Neele, and chiefly intended for native converts. Most of the girls' schools in Calcutta are under missionary management in connection with one or other of the zenana agencies.

Outside Calcutta, there was a slight decline in the number of girls' schools, but a considerable increase in that of pupils. In the Bardwán Division the scholarship and prize examinations held by the Utterpara Hitakari Sabha were brought into close conformity with the departmental standards; and the schools of the Midnapur district, which formerly held aloof, now send candidates to these examinations. In the Bírghúm district a Muhammadan girl for the first time won a scholarship offered for competition by the Sabha. In Midnapur a Santál girl won a prize of the value of Rs. 15. In the Presidency, Dacca, and Chittagong Divisions also the local Sabhas or unions were largely instrumental in promoting female education. In the districts of Eastern Bengal there was a large loss of pupils, due partly to the general levying of fees in the girls' schools. In Tipperah, however, there was a large increase, due to the raising of the capitation grant for girls making satisfactory progress. In these two Divisions 12 girls passed the upper and 194 the lower primary scholarship examination, the Dacca Division contributing by far the largest share. The Patna Division is backward in female education, the only fairly good schools being those attended by Bengali girls. In the Bhagalpur Division three special schools for Santál girls were opened in the Bhagalpur and Santál Pergunnahs districts. In Orissa an exceptionally large number of girls passed the lower primary scholarship examination.

European education.

The following table shows the number of schools for Europeans in two successive years :—

				Number of schools.		Number of scholars.	
CLASS.				1885.	1886.	1885.	1886.
Government	1	1	92	94
Aided	53	51	5,033	4,951
Unaided	15	10	1,264	1,053
Total				69	62	6,389	6,098

The reduction was due partly to the transfer of two schools to the head of charitable institutions, and partly to the non-submission of returns by a few private schools. The most important event during the year under report was the definite substitution of payment-by-results for fixed grants. The provisional scale of grants given in the draft Code of 1882 was based on data that were known to be inaccurate. The two years' experimental period came to an end at the close of 1884-85, and a revised scale was sanctioned for 1885-86. In determining the new scale, the chief object was to disturb existing rates of aid as little as possible, and especially to avoid any sudden and large reduction in the monthly grant to a deserving school. Under the revised scale there was a total increase of Rs. 789 in the monthly grants. The total expenditure for monthly grants increased from Rs. 79,829 to Rs. 86,114. The appointment of an Assistant Inspector caused an increase of nearly Rs. 5,000 under the head of Inspection; but under that of Building grants there was a reduction of Rs. 60,000, the expenditure in 1885-86 amounting to only Rs. 35,000, owing to the postponement to the current year of a large portion of the grants originally sanctioned for 1885-86; hence the total expenditure on European education fell from Rs. 2,09,806 to Rs. 1,61,346.

Of the 62 schools shown in the table, 14 were primary and 37 middle schools. The remaining 11 taught up to the Entrance examination, but were not strictly "high schools" in the language of the Code, since they did not read for the special standard therein prescribed for schools of that class. At the examination for scholarships and certificates under the Code, there was a large increase in the number of candidates, especially of those for primary scholarships and certificates. At the middle examination the candidates increased from 73 to 96: at the primary examination from 247 to 396. The percentage of passes fell from 48 to 15 at the middle examination, but rose from 66 to 72 at the primary. At both examinations the percentage was greater for girls than for boys. At the primary examination two-thirds of the girls, but only one-half of the boys, were placed in the first and second division. There was also a large increase in the number of candidates for certificates. In the annual school examinations there was a slight increase in the total number of pupils presented for examination from 3,375 to 3,397, of whom 5 per cent. were non-Europeans. The increase was general in the higher standards, the loss in the lower being accounted for by the omission of three primary schools that were examined in the previous year.

Muhammadian Education.

The following statement gives the number and percentage of Muhammadian pupils in different classes of schools:—

							Total number of pupils.	Number of Muham- madians.	Percentage of Muhammadians.
<i>Public institutions.</i>									
Arts colleges	2,996	140	4.6
High English schools	58,105	5,520	9.5
Middle ditto	51,378	6,632	12.1
Middle vernacular schools	64,752	8,457	13.06
Upper primary ditto	123,212	20,548	16.6
Lower ditto ditto	1,019,072	315,259	30.9
Professional colleges	1,193	35	2.9
Technical schools	1,966	487	24.7
Normal ditto	1,258	66	5.2
Madrassas	1,316	1,315	100.0
Total						...	1,328,280	358,459	26.9
<i>Private institutions.</i>									
Advanced	21,212	18,538	76.5
Elementary	5,537	2,845	51.3
Total						...	29,749	21,383	71.8
GRAND TOTAL						...	1,358,029	379,842	27.9

The total number of Muhammadian pupils fell from 420,768 to 379,842, and the percentage from 28.6 to 27.9, owing to the exclusion of small primary schools from the returns. On the other hand, the number of Muhammadans

in Arts Colleges rose from 129 to 140, in high English schools from 5,096 to 5,520, and in middle English schools from 6,223 to 6,632. The number of Muhammadans passing the Entrance examination in 1885 was 44; in 1886 it was 51. At the First Arts examination the numbers were 12 in 1885 and 31 in 1886; for the B.A. degree, 4 in 1885 and 19 in 1886; and for the M.A. degree, 1 in 1885 and 2 in 1886.

The central examination of Bengal Madrassas was held in April 1885, when 206 candidates appeared and 120 passed. Pupils from the unaided madrasa at Sasseram, in the district of Arrah, appeared for the first time at this examination, and with success. The estimated income of the Mohsin Endowment Fund during 1885-86 was Rs. 59,452, the estimated expenditure Rs. 57,426, and the actual expenditure Rs. 52,351, of which Rs. 28,857 were spent upon the maintenance of the madrasahs supported from this endowment, and the remainder chiefly upon the English education of Muhammadan students.

The total number of pupils coming under this class declined from 33,151 to 29,906, owing to the general causes already described. The American Baptist Mission in Midnapur increased the number of its "jungle schools" for Santál children from 52 with 1,245 pupils to 72 with 1,879 pupils. Two Santál boys passed the middle scholarship examination for the first time in that district. There were two training schools for Santáls in the Bardwán Division. In Birbhum also there were 18 schools for the education of Santáls. In the Rájsháhí Division the Bhutea boarding school at Darjeeling trained 31 pupils of the hill races to a considerable standard in English, and the Scotch Mission schools give an elementary vernacular education to the children of coolies on the tea-gardens and others. In the Chittagong Division the bulk of the aboriginal pupils are the Barua Mugs in the plains and the Joomia Mugs and Chakmas in the Hill Tracts of Chittagong; it is for the two last-named races that the boarding schools at Rangamati and Bandarban are kept up. These pupils gained some success at the middle and upper primary scholarship examinations of the division. In the Santál Pergunnahs the education of Santáls is carried on by the Government, the Church Mission Society, and the "Home Mission," under Messrs. Boeresen and Skresfend. The Government scheme for the Damin-i-Koh is working well, and more schools are needed. Both the Church Mission Society and the Home Mission have admirable girls' schools, superintended by the ladies of the Mission. The Chutiá Nágpur Division contains the largest number of aboriginal pupils. Two Kol candidates appeared at the last Entrance examination from the Ránchi School, and one passed, gaining a junior scholarship of Rs. 10 a month, which he now holds in the Bardwán Maharajah's College. This is the first instance of a pupil of aboriginal birth being successful at any University examination. Five candidates from this division passed the middle scholarship examination, 24 the upper primary, and 150 the lower primary. A part of the educational work in Chutiá Nágpur was in the hands of four missionary societies, namely, the Berlin Evangelical, the Society for the Propagation of the Gospel, the Free Church of Scotland, and St. Xavier's. In the Orissa Tributary Mehals, the special schools for the education of aborigines were the Santál schools in Morbhanj, the Bhuyan schools in Keonjhur, and the coss schools in the Khondmals.

Under this head are included *tolis* in which Sanskrit is taught, *maktabs* in which Arabic and Persian are taught, and other schools which do not conform to the departmental

Indigenous Education.

standard. The total number of indigenous schools on the returns fell from 2,512 to 2,234; but the number of their pupils increased from 27,339 to 29,749. The maktabs and madrasahs increased from 940 to 1,302, chiefly in Eastern Bengal. The number of *tolis* in Bengal decreased from 1,088 to 577, owing to the exclusion of *tolis* with less than ten pupils in the Patna Division. The Sanskrit Title examination was held in April 1885, at which 106 candidates presented themselves and 36 passed—15 in literature, 18 in law, and 3 in philosophy. A second examination was held, under the revised rules, in February 1886, at which the number of candidates fell to 58 in consequence of the difficulty of the new standard. Of those who presented themselves, 36 again passed—28 in literature, 5 in law, and 3 in philosophy. The Dacca *Sarasvat Samaj* held an examination in 1886, at which 233 candidates appeared from 59 *tolis*.

Art, Literature, and the Press.

THE principal English newspapers published in the Bengal Presidency during the year 1885-86 were—the *Englishman*, *Indian Daily News*, *Statesman and Friend of India*, *Hindu Patriot*, *Indian Mirror*, *Reis and Raynet*, *Indian Planters' Gazette and Sporting News* (Calcutta), *Darjiling News* (Darjiling), *East and Bengal Times*, (Dacca), and *Behar Herald* (Patna).

The following important publications, other than annual reports, were published during the year from the Bengal Secretariat Press :—

- (1). A Comparative Dictionary of the Bihárf Language, Part I.
- (2). Calcutta International Exhibition, 1883-84. Awards of the Juries.
 Report of the Calcutta International Exhibition, 1883-84, volume I.
 Report of the Calcutta International Exhibition, 1883-84, volume II.
 Mineral, Mining, and Metallurgical Exhibits at the Calcutta International Exhibition, 1883-84.
- (3). Code of Regulations for European Schools in Bengal for the year 1885-86, with an index and explanatory notes for the use of schools in the Lower Provinces of Bengal.
- (4). Seven Grammars of the Dialects and Sub-dialects of the Bihárf Language, Part V; South Maithili Dialect of South Darbhanga, North Monghyr, and the Madhepura sub-division of Bhagalpur, by G. A. Grierson, B.C.S.
- (5). Behar Peasant Life, being a discursive catalogue of the surroundings of the people of that province, with many illustrations from photographs taken by the Author. By the same.
- (6). A Revenue History of the Sunderbans from 1765 to 1870.
- (7). An Historical Account of the Calcutta Collectorate, by R. C. Sterndale.
- (8). Rig Veda Sanhita (in Bengali), Parts II and III.
- (9). Report on what has been done in Bengal for the medical training and treatment of women, by Dr. A. J. Cowie.

The number of vernacular newspapers supplied to the Bengal Library during the year, including two newspapers published in Assam, was 63, against 68 in the preceding year. Twelve new papers were started, while 17 old papers ceased to exist. Of the 63 newspapers, 7 were monthly, 3 fortnightly, 46 weekly, 1 bi-weekly, and 6 daily. All were published in Bengali, with the exception of the following :—Daily papers, one in Urdu; bi-weekly papers, one in Urdu; weekly papers, five in Hindi, one in Persian, three in Urdu, four in Uriya; fortnightly papers, one in Hindi; monthly papers, two in Assamese, one in Hindi, three in Uriya. Twenty-nine papers were published in Calcutta, seven in the remainder of the Presidency Division, four in the Dacca Division, three in the Bardwán Division, five in the Patna Division, three in the Chittagong Division, two in the Rájsháhi Division, six in the Orissa Division, and one in the Bhagalpur Division. Of the remaining newspapers, one was published at Chandarnagar, and three were published in the province of Assam. No papers were published in the Chutiá Nágpur Division. The leading papers were the *Narabibhakar*, *Ananda Bazar Patrika*, the *Sadharani*, the *Bangabasi*, the *Sanjivani*, the *Sahachar* (Calcutta),

the *Surabhi* and *Pataka*, the *Samaya* (Calcutta), the *Bharatbasi* (Calcutta), the *Bharat Mihir* (Calcutta), the *Som Prokash* (24-Pergunnahs), the *Bardwán Sanjivani* (Bardwán), the *Dacca Prakash* (Dacca), and the *Nava Medini* (Midnapur).

Of the daily newspapers, one (*Dainik*) had a circulation of 700, three between 450 and 625, and three between 200 and 300. Of the weekly papers, one (*Bangabasi*) had a circulation of 20,000, one of 4,500, one of 4,000, two of 3,000, one of 2,500, one of 2,350, one of 1,500, three of 1,000, and the rest below 1,000. Of the fortnightly papers, one had a circulation of 800 and another of 700.

The number of books received in the Library in 1885 was 2,731, being greater than that received in 1884 by 341. The average annual number has increased by about 80 per cent. since 1880.

Of these publications, 317 were in English and 2,414 in other languages. Their distribution as regards the place of publication was as follows:—

					No. published.
Town of Calcutta	2,000
Presidency Division	157
Dacca	170
Patna	199
Bardwán	58
Bhagalpur	3
Orissa	97
Chittagong	34
Rájsháhí	13
					2,731

No publications were received from the Chutiá Nágpur Division.

The total number of unilingual books, exclusive of periodicals, received was 1,996, and they may be classified as follows, according to the languages in which they were written and their subjects:—

No.	LANGUAGES.	Originals.	Republi- cations and translations.	No.	SUBJECTS.	Originals.	Republi- cations and translations.
1	Arabic	3	3	1	Art	35	3

None of the publications received under this head call for special notice.

Of the publications received under this head last year, the following deserve notice:—*Keshab Charit*, by Baboo Trailokya Nath Sanyal; *Akshaya Kumar Datter Jibanbrittanta*, by

Baboo Mohendra Nath Raya; *Nanak Prakash*, Part I, by Baboo Mohendra Nath Basu. The memoir of Keshab Chandra Sen contains a great deal of information regarding the great Brahmo leader and the Brahmo community. As one of the framers of the Bengali language and literature, Baboo Akshaya Kumar's memoir possesses a general interest and importance. His life was passed from the

beginning to the end in self-improvement, and in improving the lives of others by varied and valuable instruction. *Nanak Prakash*, Part I, contains a full and clear statement of Nanak's religious sayings and opinions. It is compiled from original Sikh authorities.

Of the Bengali dramas received during the year, Baboo Amritlal Basu's *Bibaha Bibhrat Natak* deserves special notice. It is a well-written social comedietta, attacking the growing Bengali practice of extorting large sums of money on the occasion of a son's marriage, and ridiculing those Bengali recipients of English education, male and female, who imitate English manners and adopt heterodox habits of eating and drinking, &c.

Of the works of fiction written during the year, *Mulhabilata*, by Baboo Sanjib Chandra Chatterji, contains a story, not of youthful love, but of the great affairs of life, such as the acquisition of vast estates and large administrative powers. It discloses considerable power and originality in the conception and delineation of character. *Pratibha*, by Baboo Barada Kanta Sen, is a pathetic story of a young Hindu widow, written from the Hindu standpoint. *Bangalir Lila*, by Baboo Dharendra Nath Pal, contains many good sketches of Bengali life and character.

The majority of historical and geographical works were of the nature of school-books, and only a few among them were new publications. Of these, the *Bangala Sahitya arthat Bangala Sahityer Utpatti O Kramonnati Pradarsan*, by Baboo Kailash Chandra Ghosh, containing a history of Bengali literature from the earliest times, may be mentioned. The late Russian imbroglio led to the publication of three Bengali books, describing the history of Russia and her movements in Central Asia.

The publications received under this head were school-books. Of these, the *Balyabidhan* and *Sambhagya Sopan*, two good readers, by Baboo Jadu Nath Majumdar and Baboo Prasanna Kumar Das Gupta, respectively, and another reader, the *Bharat Ratnamala*, compiled by Baboo Sarada Charan Mitra, and consisting of a few good selections from Kali Prasanna Sinha's Bengali translation of the *Mahabharat*, deserve notice.

Among the legal publications of the year, the Tagore Law Lectures for the year 1883 and Pandit Jogendra Smartha Siromani's *Commentary on the Hindu Law* may be mentioned.

The works received under this head do not call for any special remarks. Homœopathic publications formed the most numerous class, and works relating to the Hindu system of medicine were next to them in importance in point of number.

Of miscellaneous works, *Alochana*, by Baboo Rabindra Nath Tagore, is a collection of essays, written in a style half poetic, half discursive. A few works were received illustrative of the working of the caste spirit in this country. Among these *Subarnabanik*, containing a history of the *Beniya* caste in Bengal, by Baboo Nimai Charn Sil, deserves special notice. *Bharat Rahasya, Part I*, by Dr. Ram Das Sen, was an interesting work, containing a description of some of the religious sacrifices which used to be performed in ancient India, such as the Aswamedh, the Purushmedh, and the Rajsuya sacrifices; of ancient Indian weapons, such as bows, swords, &c.; of the composition of armies in ancient India, and their disposition on the occasion of battles; of the laws which regulated ancient Indian warfare and the conduct of individual soldiers and combatants, &c.

The philosophical works received last year consisted mainly of reprints, or translations, or reprints with translations and expositions of some of the *Upanishads*, of the *Panchadasi*, of the *Brahma sutras*, of *Vyas* and of other works. The *Upanishads* were brought out chiefly by Baboo Mahes Chandra Pal, and English translations of some of the Vedanta treatises were published by Baboo Nandalal Dhol. *Ngayamukula*, by Pandit Rajendro Narayan Sastraratna,

giving a very summary account of the Nyaya and Vaisheshika systems of philosophy, and explaining in what points those systems agree with, or differ from, the conclusions of modern European science and philosophy, deserves special notice.

Under this head the following books may be mentioned:—The *Durgotsav Lahari*, by Baboo Ram Deb Datta, and the *Mahapuja Upalakshye Bhakti Puspanjali*, by Baboo Sital

Poetry.

Chandra Biswas. The writers of these two poems are of opinion that the goddess Durga or Sakti should be worshipped, not so much for religious, as for social or political purposes. *Samalachak Kabya*, by Baboo Banayari Lal Sarma, contains criticisms on the writings of some living authors. A Sanskrit poem, entitled *Basudeb-bijaya*, by Pundit Ram Nath Tarkaratna, was also received.

Politics.

Under this head no work of such importance as to call for notice here was published.

Among the orthodox Hindu publications, *Dharmabyakhyā*, by Pundit Sasadhara Tarkachuramani, deserves special notice.

Religion.

In this publication an attempt is made to show that every Hindu rite, ceremonial, form of worship, religious practice and observance, is justified by physical principles, or is rendered necessary by the physical constitution of man. Among the books written by members of the Sadharan Brahmo Samaj, *Dharmajijnasa*, by Baboo Nagendra Nath Chatterji, deserves notice. The most interesting of Baboo Keshab Chandra Sen's writings, published during the year by the Brahmo Samaj of India, was his *Jibanceda*, in which an exposition is given by himself of his own religious life, and of the different stages in its growth and development. Baboo Jogendra Chandra Ghosh's pamphlet, reviewing Chaitanya's ethics from the Positivist standpoint, also deserves notice.

Of the scientific works published during the year, *Swasthya Raksha o Sadharan*

Science.

Swasthya tattva, volume I (preservation of health and the principles of public sanitation), by Baboo

Dharmadas Basu, may be specially mentioned. It is intended not so much for school-boys as for school-masters and the general community.

The most interesting works under this head are the books written by Baboos Grish Chandra Basu and Praanatha Nath

Voyages and travels.

Basu, describing their English visits, and the work, entitled *Inlande Banga Mahila*, containing a Bengali lady's account of what she has seen in England. *The Beautiful countries of Australia, New Zealand, and Tasmania*, by the Revd. C. Cesary, was another interesting book of travels received last year.

Among the old periodicals, the *Nabajiban*, the *Prochar*, the *Bharati*, the *Argularsan*, the *Bandhab*, and the *Nabyabharat*

Periodical literature.

were conducted with ability. Amongst the new periodicals received last year, the *Balak*, edited by Srimati Jnanada Nandini Debi, a lady of the well-known Tagore family of Calcutta, may be specially mentioned. Many among the new periodicals were of a religious character, their object being to advocate Hinduism.

The number of publications of which copyright was registered under

Act XXV of 1867.

Act XXV of 1867 was 2,526 in 1885-86, against 2,325 in the previous year. Of this number, 1,868

were registered in the office of the Inspector-General of Registration and 658 in district offices.

The cost of books purchased under section 10 of the Act amounted to Rs 4,670 2-9, against Rs. 3,901-4-3 in the preceding year. The fees levied under section 18 amounted to Rs. 124, against Rs. 118.

VIII.—ARCHÆOLOGY.

DURING the year the new arrangements which were made on the retirement of General Cunningham came into force, and the work of exploration was commenced by the newly appointed staff.

Now discoveries were made in the Sháhábád district, where the hitherto unexplored fortress of Shergarh was partially examined. Sections and detailed drawings were made of the great Tombs of Sher Shah and his father in Sasseram; of the latter, with the exception of the section of the interior surface of the great dome, the materials for a complete illustration of the architecture have been secured. The measurements for a section of the dome, to take which heavy scaffolding would have been required, had to be postponed for want of time.

Sections have also been taken of portions of Sher Shah's Tomb. The remainder will be finished this year, and materials will then be available for the detailed illustration of the architecture of this monument, the conservation of which was undertaken a short time ago.

In the Gya district some trial trenches were made on lines indicated by General Cunningham, and resulted in the discovery of the remains of one of the great monasteries mentioned by Fa Hian, which had baffled the search of previous explorers. The remains were discovered to the north of the temple within the "Garh" or fort, buried in a field which was perfectly level, and where the absence of the smallest mound or inequality indicative of buried ruins seemed to deny all hope of any discoveries; but a careful study of the Buddhist records, and a comparison of them with the remains exhumed during the conservation of the temple at Buddha Gya, had led General Cunningham to believe that the monastery might be found in this place, if anywhere. The remains are of much value, as making an important addition to the list of historical monuments, capable of strict identification, discovered in Bengal; and it is hoped that at some future time the search may be prosecuted, and that specimens and remains of ancient art and ornamentation will be obtained from this, perhaps the oldest known monastery in Bengal.

Mr. Beglar's researches in Patna have led him to believe that the river wall of the Patna fort is built upon an earlier foundation; and if this is so, these earlier foundations may be the remains of the landward walls of Asoka's great fort. This question offers another promising field for enquiry, and will not be lost sight of.

In the Monghyr district several new inscriptions of the Muhammadan period have been obtained, and some interesting information has been collected; but the most important and interesting building—the Zanjiri Masjid within the fort, universally admired and praised—was found to have been demolished by the owner of the land on which it stood, partly because it was in a ruinous condition, and partly to prevent the land from practically passing out of his possession, as the masjid was so greatly venerated that, in spite of its dilapidated condition, Muhammadan votaries, much against the will of the landlord, would persist in using it on festival days for prayers. Some curious Buddhist and Brahmanical remains were found buried beneath the floors and built into the walls of the masjid. These have been placed in a local museum, while the stones were used to build the clock tower lately presented to the city by the owner.

In Bhagalpur and its vicinity several inscriptions and minor monuments were visited; but the exploration of the numerous ancient and very interesting remains in this district—one of the most promising in Bengal, and so far but little explored—will take some time to carry out.

In the Maldah district the Adina Masjid has been measured, and materials for adequately illustrating this, one of the most ancient as well as the greatest of the Muhammadan monuments of Bengal, are now being worked up.

The exploration of a fine small temple in Chogda, and some other unimportant remains in the Huglí and Nadiyá districts, complete the season's work of the new Survey Department.

IX.—MISCELLANEOUS.

Ecclesiastical.

THE Ecclesiastical establishment paid entirely or partly by Government in Calcutta and the districts of Bengal on the 31st Ecclesiastical Administration. March 1886 consisted of—

The Lord Bishop of Calcutta; the Archdeacon of Calcutta and Commissary to the Lord Bishop; the Domestic Chaplain to the Lord Bishop; the Registrar of the Diocese and Secretary to the Lord Bishop; seventeen chaplains of the Church of England; one chaplain of the Church of Scotland; ten ministers of the Additional Clergy Society; and six priests of the Roman Catholic Church.

There is nothing to note under the head of the working of the Burial Board constituted under Act V of 1881 for the conservation and management of Christian cemeteries in Calcutta.

Fifteen marriages were registered during the year under the Brahmo Marriage Act (III of 1872). Of these, nine were registered at Calcutta, one at Dacca, three in the 24-Pergunnahs, and two at Motihárá. In the preceding year the number of such marriages was twelve only.

Working of the Brahmo Marriage Act.

Stationery.

THE total value of stationery issued during 1885-86 was Rs. 19,80,618, against Rs. 18,42,772 in the previous year, thus showing an increase of Rs. 1,37,847. The heads under which the increase is chiefly visible are printing paper, coloured paper, other paper, brown cartridge, and bound books. The local purchases made during the year exceeded those of the previous year by Rs. 74,218, the chief increase being in country paper. Country articles, exclusive of paper, were purchased under contract to the value of Rs. 1,09,243, which is less than that of 1884-85 by Rs. 1,745.

The system of supplying up-country stations with paper direct from the mills continues to work well, and resulted during the year in a saving of Rs. 15,620. The total quantities contracted for increased from 1,500 tons in 1884-85 to 1,700 tons in 1885-86. Healthy competition between the several mills has, it is reported, contributed to great improvement in the quality of the paper as well as fairness in the price; and it is anticipated that, except as regards the superior kinds of writing and drawing paper, the Government will in future be almost independent of supplies from Europe.

The value of stationery supplied to officers under the Government of Bengal amounted to Rs. 4,73,637, against an almost equal amount in the previous year. The sum realised from stationery sold to officers not authorised to receive supplies without payment, inclusive of the usual commission of 10 per cent., amounted to Rs. 59,395, against Rs. 27,428 in 1884-85.

The Committee appointed to report on the reorganisation of the Stationery office in all its departments, and on the system of accounts, indents, and supplies, referred to in the last year's report, submitted a full report, making several important proposals for the better working of both the Form-store and Stationery branches of the office. Most of these proposals have been approved by Government. The question of providing more suitable accommodation for the Stationery office is pending the consideration of Government.

Printing.

THE statement below exhibits the operations of the Printing Department during the year :—

The outturn of the Jail Press during the year amounted to Rs 1,43,970, against Rs. 1,35,959 in the previous year, the expenditure being Rs. 41,059, against Rs. 53,017 in 1884-85. The profits of the Jail Press were Rs. 99,381 against Rs. 84,157 in the preceding year. Besides the amount shown as outturn for the current year, Rs. 1,948-12-9 was received on account of the sale of seven unserviceable machines.

The outturn of the Secretariat Press amounted to Rs. 2,50,125 during the current year, against Rs. 2,28,368 in the previous year. The expenditure was Rs. 2,28,661 against Rs. 2,17,688, showing an increase of Rs. 10,973, which is due to the steady increase of work, as will be seen from the outturn.

The Publishing Department shows an increase of Rs. 5,516 over last year's expenditure, due to the increased expenditure for postage and other charges on account of the Law Reports. There has been an increase in the receipts to the extent of Rs. 16,852

The following statements show the profit and loss for the year and the cash actually received and disbursed :—

Zoological Garden.

THE total income of the gardens during the year under report, including the Government grant of Rs. 20,000, amounted to Rs. 46,338, against Rs. 52,097 in 1884-85. From donations and subscriptions an income of Rs. 2,946 was derived, against Rs. 3,588 in the preceding year; entrance receipts amounted to Rs. 7,664, against Rs. 8,511 in 1884-85; and there was a slight decrease under every other head except "rents," which improved by about Rs. 600, and receipts from the moonlight fête and the Fancy Fair, which amounted to Rs. 3,665, as compared with the Rs. 1,743 of the previous year. Exclusive of opening balances and receipts from sales of Government paper (amounting to Rs. 4,884 in the year under review and to Rs. 9,880 in 1884-85), the net income of each year was—

1884-85	... Rs. 42,096		1885-86	... Rs. 40,043
---------	----------------	--	---------	----------------

The expenditure of the year amounted to Rs. 39,406, against Rs. 50,685 in 1884-85. Establishments cost Rs. 8,494; food of animals, Rs. 9,266; construction and repairs of buildings and roads, Rs. 13,215; and purchase of animals, Rs. 3,078. It is evident that the financial resources of the institution must be husbanded with care, as it is only by strict economy that they can be maintained on a satisfactory footing. The most important works of the year were the re-adaptation of the "Doomraon" and "Sarnomoyi" houses, the building of a masonry house for the sambars, and the filling up, on sanitary grounds, of the old water-fowl tank near the entrance lodge, and converting the site of the tank into a lawn planted with ornamental plants and shrubs.

The number of visitors to the gardens, on payment of the usual entrance fees, was 108,944, against 120,813 visitors in 1884-85, and against an average number of 129,373 for the six preceding years. A large number of students and children under eight years of age were also admitted during the year 1885-86 free of charge. During the year season tickets were issued at the following rates :—

				Rs.
To admit one family on foot, horseback, or in a carriage.	{	For one year	...	16
		For six months	...	10
To admit one person on foot, horseback, or in a carriage.	{	For one year	...	12
		For six months	...	8

The season commences from the 1st April or the 1st October. Holders of family season tickets for seven years, and of single tickets for nine years consecutively, or otherwise, may become life members without further charge.

Considerable additions were made to the menagerie, chiefly by presentations, exchange, and deposit. The most interesting acquisition was a young hippopotamus, purchased for Rs. 3,000, which has already proved a great attraction to visitors. A sight uncommon in these latitudes was furnished by a Polar bear, which was last winter deposited in the gardens by its owner for sale, and has, with the assistance of the luxury of 15 seers of ice daily, got safely through the hot weather. The following is a list of animals for the first time exhibited in the gardens :—

Hippopotamus.	White pea-fowl (deposit).
Polar bear (deposit).	Native companion.
Cassybara.	American ostrich (Rhea).
Prairie marmot.	Californian quail.
Rufous kangaroo.	Amherst pheasant.
Two-toed sloth.	Scemmering's pheasant.
Virginian opossum.	Virginian nightingale.
Sclater's monaul.	Waxwing.
	Rose breasted Grossbeak.

As noticed in last year's Report, the Committee's attempt to establish a dairy farm and to improve the indigenous breed of cattle proved a failure, all the imported stock having been lost by an outbreak of rinderpest. The Committee remark that there are many difficulties in the way of successfully carrying out such experiments, and it is necessary to secure trustworthy supervision, the cost of which swallows up the profits which might otherwise accrue.

Economic and Art Museum.

THE year 1884-85 was remarkable in the history of this institution for a complete alteration and wide extension of its scope; and in the year now under review the energies of the management were wisely concentrated on consolidation of the work done in the previous year, rather than on original work in fresh directions. The removal of the Museum from the old premises in Hastings' Street to the buildings adjoining the Imperial Museum, constructed for the Calcutta International Exhibition of 1883-84, was completed during the year.

The courts in which the collections are now arranged are classified as follows:—Artware, Ethnology, Economic, Timber, Industrial. In the first three courts the exhibits have been completely re arranged and catalogued, and the greater number of them have been correctly labelled. In the Artware court the specimens are classified in 27 groups, and number altogether 7,949. The most valuable additions during the year were 161 specimens of gold, silver and enamelled jewellery, 127 of which are said to have been collected during the first Yunnan Expedition of 1868, and 18 samples of Jeypore marble carvings. The smallness of the court, and the want of show-cases, deteriorate greatly from the effect that might be produced by its exhibits; but the Committee contemplate taking measures to remedy these defects. The Imperial Museum handed over during the year a collection of over 3,700 ethnological specimens to the Ethnology court of the Bengal Museum, which now contains over 6,500 exhibits. Some interesting specimens of Naga cloths, arms, &c., were presented during the year. The economic collection was still kept in a temporary shed, where the exhibits were much exposed to climatic influences. It is hoped, however, that it will be possible before long to secure more sheltered accommodation for this court. Two hundred and eighty-eight new specimens were added during the year 1885-86 to the 18,242 specimens of economic products exhibited in the previous year.

In the Timber court the specimens were carefully arranged, classified, and labelled during the first five months of the year, and formed a valuable collection for reference to any student of the subject of Indian timbers. In August, however, the whole collection was made over to the Forest Department for the construction of the arch formed of Indian timber exhibited in the Indo-Colonial Exhibition, London; and since then the Timber court has remained closed. At the close of the London Exhibition the arch will probably be returned to the Museum, and will form a very handsome exhibit; but it will, in that case, be necessary to make a new collection of timber for scientific study.

The Industrial court contains most of the presentations made to the Bengal Government by British and Foreign exhibitors at the Calcutta International Exhibition of 1883-84. No systematic arrangement is at present possible, and the collection is too incomplete to be of much educational value; the work done in this court was therefore confined to keeping the specimens in good order.

Free admission to the Museum was stopped in December 1885, during the continuance of the preliminary exhibition of articles intended for the Indo-Colonial Exhibition. During the remaining eleven months of the year, 270,553 persons visited the Museum, the monthly average being 21,505. This is by far the largest number yet recorded, and the increase is no doubt due to the removal of the Museum to the close proximity of the Imperial Museum. The number of visitors was greatest in January 1886, when it reached 38,130. The cost of maintaining the Museum amounted to Rs. 10,966-10-3, against Rs. 13,124-4 last year, the decrease being mainly due to saving of house-rent formerly paid for the premises in Hastings' Street.

VIII.—(Judicial).—Showing the employment of convicts as prison officers in the jails and subsidiary jails of Bengal during the year 1885	lxiv
X.—(Financial).—Showing the expenditure in guarding and maintaining the prisoners in the jails and subsidiary jails of Bengal during the year 1885, excluding the cost of building new jails, of additions, alterations, and repairs	lxv
XI.—(Financial).—Showing the expenditure in guarding and maintaining the prisoners in the jails and subsidiary jails of Bengal during the year 1885 (excluding the cost of building new jails, of additions, alterations, and repairs), compared with the expenditure on the same account in each of the three preceding years	lxv
XII.—(Financial).—Showing the employment of convicts in the jails and subsidiary jails of Bengal during the year 1885	lxvi
XIII.—(Financial).—Showing the net cash earnings of convicts sentenced to labour in the jails and subsidiary jails of Bengal during the year 1885	lxvi
XIV.—(Financial).—Showing the net cost of the prisoners in the jails and subsidiary jails of Bengal during the year 1885	lxvii
XV.—(Vital).—Showing the sickness and mortality among the prisoners of all classes in the jails and subsidiary jails of Bengal during the year 1885	lxvii
XVI.—(Vital).—Showing the admissions and deaths from the chief diseases among the convicts in the jails and subsidiary jails of Bengal during the year 1885	lxviii
XVII.—(Vital).—Showing the mortality according to age among the convicts in the jails and subsidiary jails of Bengal during the year 1885	lxviii
XVIII.—(Vital).—Showing the mortality among the convicts in the jails and subsidiary jails of Bengal during the year 1885, according to the length of time passed in jail	lxix
XIX.—Showing particulars regarding prisoners under trial in the jails and subsidiary jails of Bengal during the year 1885	lxix
Statement A.—Showing the nature and amount of accommodation for each class of prisoners in the jails and subsidiary jails of Bengal during the year 1885	lxx
Statement B.—Showing the condition of the prisoners discharged from the jails of Bengal during the year 1885	lxx
Statement C.—Showing working of the mark-system in the jails of Bengal during the year 1885	lxxi
Statement D.—Showing the nature of the crimes for which convicts were imprisoned in the jails and subsidiary jails of Bengal during the year 1885	lxxi

D.—POLICE—

1.—Statement showing strength and cost of police during 1885, including the Railway Police	lxxii
2.—Statement showing the distribution and employment of the police force, including the Railway Police, during 1885	lxxiv
3.—Statement of village and town police not subject to rules of regular police during 1885	lxxviii
4.—Return showing equipment, discipline, and general internal management of the force during the year 1884, exclusive of that under the Commissioner of Police, Calcutta	lxxv
5.—Return showing the race and religion or caste of officers and men employed in the police during the year 1884, exclusive of the force under the Commissioner of Police, Calcutta	lxxx
6.—Return showing the number of persons convicted in cognizable and non-cognizable cases during the year 1885 in the several districts of Bengal	lxxxii
7.—Return of criminal cases cognizable by the police during the year 1885, exclusive of cases in Calcutta	lxxxiii
8.—Return of criminal cases not cognizable by the police during the year 1885, exclusive of cases in Calcutta	xciv
7a.—Return of criminal cases cognizable by the police in Calcutta and the Suburbs during 1885	xcvi
8a.—Statement of criminal cases not cognizable by the police during 1885 in Calcutta and the Suburbs	civ

F.—MARINE—

I.—Statement showing the various Government ships and vessels employed under the Government of Bengal during the year 1885-86	cvi
II.—Statement showing the number of officers and men employed otherwise than in Government vessels under the Government of Bengal during the year 1885-86	cvi

PART III.

PAGE.

STATISTICS OF PRODUCTION AND DISTRIBUTION—

A.—FINANCE—

- I.—Account of the gross net revenues of the Province of Bengal for the year 1885-86 cxvii
- II.—Account of the expenditure from the net income of the Province of Bengal for the year 1885-86 cxviii

B.—PUBLIC WORKS—

- 1.—Statement showing the expenditure on public works during the year 1885-86 cx
- 2.—General abstract of financial results, showing the estimated cost of construction of irrigation and navigation works, the capital outlay thereon, the revenue derived therefrom, the working expenses and the interest on the debt incurred in respect of these works for and to end of 1885-86 cxii

C.—RAILWAYS, 1885 cxii

D.—MARINE—

- I.—Statement showing the various Government ships and vessels employed under the Government of Bengal during the year 1885-86 cxiii
- II.—Statement showing the number of officers and men employed otherwise than in Government vessels under the Government of Bengal during the year 1885-86 cxiii

II.—TRADE—

- I.—Quantities and value of the principal and other articles of merchandise and value of treasure imported from foreign countries into the Presidency of Bengal during the official years 1884-85 and 1885-86 cxiv
- II.—Quantities and value of the principal and other articles of foreign merchandise and Indian produce and manufactures and value of treasure exported to foreign countries from the Presidency of Bengal during the official years 1884-85 and 1885-86 cxxxiv
- III.—Statement of customs duty collected on the principal and other articles of merchandise subject to duty on imports and exports at ports in the Presidency of Bengal during the official years 1884-85 and 1885-86 cliv
- IV.—Total value of merchandise (distinguishing country and foreign) and treasure imported and exported coastwise into and from the Presidency of Bengal in the official years 1884-85 and 1885-86 clv
- V.—Number and tonnage of steam and sailing vessels, distinguishing their nationality, which entered and cleared with cargoes from and to foreign countries at ports in the Presidency of Bengal in the official year 1885-86, compared with the totals of the year 1884-85 clvi
- VI.—Number and tonnage of steam and sailing vessels, distinguishing their nationality, which entered and cleared in ballast from and to foreign countries at ports in the Presidency of Bengal in the official year 1885-86, compared with the totals of the year 1884-85 clx
- VII.—Number and tonnage of steam and sailing vessels, distinguishing their nationality, employed in the interport trade, which entered and cleared with cargoes and in ballast in the Presidency of Bengal in the official year 1885-86, compared with the totals of the year 1884-85 clxiv

I.—COINAGE AND CURRENCY—

- 1.—Coinage, 1885-86 clxvi
- 2.—Calcutta circle of issue of paper currency for the year 1885-86 clxvi

K.—CHARITABLE INSTITUTIONS—

- Charitable institutions under Government superintendence in the Province of Bengal during 1885 clxviii

PART IV.

STATISTICS OF INSTRUCTION—

A.—ECCLESIASTICAL—

- Return of persons according to religious denominations in the Bengal Presidency for the year 1885-86 clxix

B.—EDUCATION—

- I.—Abstract return of colleges, schools, and scholars in the Lower Provinces of Bengal at the end of the official year 1885-86 clxx
- II.—Abstract return of expenditure on public instruction in the Lower Provinces of Bengal for the official year 1885-86 clxxii
- III.—Return of colleges and schools and of scholars attending them in the Lower Provinces of Bengal for the official year 1885-86 clxxiv
- IV.—Return of expenditure on public instruction in the Lower Provinces of Bengal for the official year 1885-86 clxxvi
- V.—Return of the stages of instruction of pupils in public schools for general education in the Lower Provinces of Bengal at the end of the official year 1885-86 clxxviii
- VI.—Return showing the results of prescribed examination in the Lower Provinces of Bengal for the official year 1885-86 clxxix
- VII.—Return showing the distribution of local fund and municipal expenditure on public instruction in the Lower Provinces of Bengal for the official year 1885-86 clxxx

C.—SCIENTIFIC AND LITERARY—

1.—Return of scientific and literary societies in Bengal for the year ending 31st March 1886	clxxxii
2.—The Press.—Annual return of presses worked, and newspapers published thereat, in the Bengal Presidency during the year 1885-86	cxciv

PART V.

STATISTICS OF LIFE—

A1.—Statement showing deaths among the population of Calcutta and its Suburbs and among other classes in respect of which particulars have been ascertained during 18-5	ccii
Statement showing deaths registered in the districts of the Province of Bengal for the year 1885	cciii
B.—Return showing the diseases treated and the deaths from each class of disease in the principal hospitals in Bengal during the year 1885	cciv
C.—Return of vaccine operations in Bengal during the year 1885	ccvii

PART I.

STATISTICS OF PHYSICAL, POLITICAL, AND FISCAL GEOGRAPHY.

A.—PHYSICAL GEOGRAPHY.

I.—Geographical area of the Territories under the Civil and Political control of the Lieutenant-Governor of Bengal in 1885-86.

PRINCIPAL GEOGRAPHICAL DIVISIONS.							Total area in square miles.
BRITISH POSSESSIONS DIRECTLY ADMINISTERED —							
Bengal	70,419*
Behar	44,164
Orissa	9,041
Chota Nagpore	26,965
Total directly administered						...	150,589
TRIBUTARY STATES—							
Cooch Behar Tributary States	1,307
Orissa	ditto	15,187
Chota Nagpore	ditto	16,054
Hill Tipperah (both surveyed and unsurveyed tract)	4,086
Total						..	36,634
NATIVE STATES AND TRIBUTARIES—							
Sikkim	2,600
Total area of Bengal						...	189,823

* Excluding the Sunderbuns, 5,309 square miles.

Provinces for season 1885-86, or from 1st October 1885 to end of field season.

Average size of village circuits in acres.	Approximate total area in square miles.	Estimated cost of all kinds, including contingencies for season 1885-86, or from 1st October 1885 to 30th September 1886.	Probable rate per square mile in surveyed area.	Extracts from remarks by executive officer.
		Rs. A. P.	Rs. A. P.	<p><i>On Thakbust Maps.</i></p> <p>There were no thakbust maps. The 4" maps of the old (1815-47) Revenue Survey of Mozufferpore (Tirhoot) were made use of as guides to the village boundaries.</p> <p><i>On Demarcation in the Field.</i></p> <p>Tuppels Chakla Naic and Bhatsala and Pergunyah Gadisar were demarcated; but the trijunction pillars were not erected previous to survey. In tuppel Gir-jant the traverse lines and angles were surveyed without previous demarcation, and the survey erected the trijunction pillars in 480 villages=217 square miles. In some cases the demarcation was defective, and the old revenue survey boundaries had not been followed out in the first instance.</p> <p><i>General.</i></p> <p>This was the first year of the survey, and a good deal of difficulty had to be overcome in getting together and training an establishment for the new work of record-writing. As there was no boundary survey in advance, the interior field work did not commence till December. The work was rendered expensive from all village labour having to be paid for.</p> <p>Owing to a full outturn not having been made, the cost of superintendence is larger than usual. The records are elaborate and involve extra cost and labour.</p>

PART II.

STATISTICS OF PROTECTION.

A.—LEGISLATIVE.

Statement of Bills proposed or pending in the Legislature of the Province of Bengal in 1885-86.

TITLE OF BILL.	By whom proposed.	Object and character of Bill.	If pending, why, and in what stage.
1. Bill to amend the Bengal Vaccination Act, 1880.	Hon. Mr. Reynolds	To extend the benefits of the Bengal Vaccination Act, 1880, to immigrants and temporary sojourners.	The report of the Select Committee was presented and the clauses of the Bill settled without amendment on the 27th March 1886, and the Bill was passed on the 10th April 1886.
2. Bill to amend Act III (B.C.) of 1879 (an Act to provide for the periodical inspection of steam-boilers and prime-movers attached thereto in the Town and Suburbs of Calcutta and in Howrah).	Ditto	To prevent interruption to the work of manufacture this Bill as originally introduced provided that a certificated Engineer's report on the condition of a prime-mover is to be accepted as sufficient; it also empowered the Government to frame rules for the grant of certificates to persons qualified to act as Engineers. But the Bill was eventually passed in the form recommended by the Boiler Commission by simply striking out of Act III of 1879 all words which referred to the inspection of prime-movers.	Read in Council on the 24th January 1885, and passed on the 10th April 1886.
3. Bill to consolidate and amend the law relating to Canoongoes and Patwaries.	Hon Mr. MacDonnell	To enable the Government to establish an independent agency, to maintain the record of rights and the settlement of rents when ascertained and fixed by a cadastral survey. The cost of such agency to be defrayed by the levy of a cess on immoveable property in the manner prescribed by the Cess Act.	Read in Council and referred to a Select Committee on the 10th February 1886, but not yet reported upon.
4. Bill to provide for the registration of permanent tenures.	Hon. Mr. Reynolds	To provide for the preparation and maintenance of registers of permanent tenures. The registration as a rule is to be optional, but the Bill enables the Government to direct compulsory registration within specified areas, when it thinks fit.	Read in Council on the 20th December. Preliminary report presented on the 10th April 1886.

Statement of Acts passed by the Legislative Council of Bengal in 1885-86 and sanctioned as required by law.

TITLE OF ACT.	By whom proposed.	Object and character of Act.	Date on which sanctioned.
ACT NO. I OF 1886. An Act to further amend the Village Chowkidari Act, 1870.	Hon. Mr. Garrett	To introduce a better system of appointing panchayats, and securing the more certain and punctual payment of chowkidars.	Lieutenant-Governor's assent, 10th April 1886. Governor-General's assent, 24th May 1886.
ACT NO. II OF 1886. An Act to amend Act II (B.C.) of 1866, and the Calcutta Police Act, 1866.	Hon. Mr. Reynolds	To enable the Calcutta and Suburban Police to arrest without a warrant drunken persons guilty of riotous or indecent behaviour in the public streets, and persons committing offences against public decency.	Lieutenant-Governor's assent, 20th March 1886. Governor-General's assent, 28th May 1886.

Notes.—Column 1,—"sub-head 'To Chief Magistrates of Districts.'"—Includes other Magistrates authorized to hear appeals under section 40, C.P.C.
 Column 2.—Total columns 3 to 12. Cases transferred from one court to another in the same province will appear only against the court by which decided, or in which pending at the end of the year, if not decided.
 The words "applicants and revision before the courts" in this column should be held to include only accused persons on whose behalf an application for revision is made, or in whose interest the Magistrate or Judge may take steps to obtain cases for revision.
 Column 3.—Where such application is made, or such steps are taken, on behalf of a complainant, the fact should be noted, with the number of complainants concerned. This note is held to apply also to cases dealt with by the High Court on review of return.
 Column 4.—Appeals dismissed under section 423, C.P.C., should be entered in this column.
 Column 5.—Appeals of discharge set aside by a superior court under section 436 of C.P.C., should be entered in this column.
 Column 6.—When a sentence is reversed or proceedings are quashed on appeal, and a new trial or further enquiry is at the same time ordered, the appellate Court should not fill in column 8 as well as column 10, or column 9 as well as column 10 in each case respectively, but should make the entry in column 10 only.
 Column 7.—Duration of appeals applications for revision, or references should be calculated thus:—
 (1) Appeals—from date of receipt of receipts in office of the petition of appeal.
 (2) Applications for revision—from date of receipt of petition of revision.
 (3) Applications for further enquiry—from date of receipt of petition of further enquiry.
 (4) Cases sent to the High Court otherwise than on application—from date of the order calling for the records.
 Column 8.—Persons whose appeals were rejected under section 421, Criminal Procedure Code, should be entered in column 4, in which should also be included applicants for revision, whose cases the courts have refused to submit to the High Court.
 Column 9.—Persons whose appeals were referred to the High Court.
 Column 10.—In those cases these Courts referred to the High Court.
 Column 11.—In those cases these Courts referred to the High Court.
 Column 12.—In those cases these Courts referred to the High Court.
 Column 13.—In those cases these Courts referred to the High Court.
 Column 14.—In those cases these Courts referred to the High Court.

(a) In addition to these, one appeal of one person from Port Blair, filed in 1885, was decided during the year.
 (b) Besides this there were 2,111 accused persons in whose cases the applications made were not in their behalf or interest.
 These persons, though not shown in column 2, are shown in the columns 4 to 12 according to the result of the applications.

B.—JUDICIAL STATEMENTS—continued.
7—(Civ.)—Statement showing the number and description of Civil Suits instituted in the Civil Courts in the Lower Provinces of Bengal in the year 1885.

[illegible]

It is considered as the date of institution, unless some defect or omission requires to be amended before the plaintiff can be admitted, in which case the date of admission after amendment shall be regarded as the date of institution. With regard to applications to execute decrees, the date of their presentation should alone be considered. In calculating a vacatur duration, the time that the suit has been actually pending in the particular Court should alone be calculated. The interval should be omitted, during which an application for review would have been granted, or an appeal in which an order of remand has been passed, has been pending in the Superior Court. Revised suits are to be treated as if newly instituted on rival.

II.—Account of expenditure from the net Income of the Province of Bengal for the year 1885-86.

MAJOR HEADS.	AMOUNT.		REMARKS.
	Past year 1884-85.	Present year 1885-86.	
	Rs.	Rs.	
1. Interest on ordinary debt ...	8,527	9,059	There appears an increase under "interest on stock-notes," and a small decrease under "commission on stock-notes."
2. Interest on other obligations ...	2,09,302	1,62,402	The decrease is chiefly due to the reduction of deposits both in the Presidency and district savings banks consequent on the growth of post-office savings banks.
Civil and political salaries and establishments.	36,66,001	36,41,862

A.—FINANCE—concluded.

II.—Account of expenditure from the net Income of the Province of Bengal for the year 1885-86—concluded.

MAJOR HEADS.	AMOUNT.		REMARKS.
	Past year 1884-85.	Present year 1885-86.	
	Rs.	Rs.	
21. Marine	8,47,098	8,26,327	Decrease chiefly under subsidies to steam boat companies. There are also smaller payments under "purchase of marine stores" and coal for the building, repair, and outfit of ships and vessels against increase under Pilotage, Pilot establishments and vessels.
22. Education	33,97,637	32,78,162	Decrease chiefly under Government colleges, General, and Government colleges, Professional and grants-in-aid. There are also smaller payments under "Direction," "Scholarships," against larger payments under Inspection.
28. Civil furlough and absentee allowances.	33,574	25,510	Decrease under allowances of officers on furlough in England drawn in India against a slight increase under leave allowances of officers lent to foreign estates.
29. Superannuation, retired, and compassionate allowances.	11,99,258	12,49,498	Increase chiefly under superannuation and retired allowances. There are also larger payments under gratuities and a special adjustment under this head in 1885-86 of pensions of the Bengal Civil Fund.
30. Stationery and printing	17,17,261	18,97,274	Increase mainly under stationery purchased for central stores, Imperial and Government presses. There are also increase in printing at private presses against slight decrease under Stationary office at the Presidency and stationery purchased in the country.
31. Miscellaneous	1,51,824	4,81,170	Increase chiefly under "Donations for charitable purposes," "Special Commission of Enquiry," and miscellaneous and unforeseen charges, against decrease under charges for remittance of treasure, "extraordinary items," Rewards for the destruction of wild animals and rents, rates, and taxes.
32. Famine relief charges	11,841	1,23,741	Increase is chiefly due to the adjustment under this head of expenditure incurred on the acquisition of land for the Sultanpur-Bogra and the Mozufferpur-Sutamarhi railways.
39. Charges in respect of capital interest on debt.	39,27,883	41,29,705	Increase due to the progress of expenditure on productive public works.
State railways	22,61,666	30,93,815	Decrease due to the larger expenditure in 1884-85 for working and maintenance charges of the Northern Bengal Tirkood, Patna-Gya, and Nabhat State Railways, against increase in 1885-86, under Dacca State Railway, and the adjustment of Public Works Secretariat establishment charges debitable to Provincial railway.
41. Irrigation and Navigation ..	19,95,930	22,16,370	Increase under Irrigation and Navigation in charge of Public Works officers, partially compensated by smaller expenditure under Irrigation working and maintenance.
46. Civil buildings, road, and services.	30,02,504	27,56,013	Larger expenditure in 1884-85 by Public Works officers.
49. Exchange on transactions with London.	3,758	The transactions under this head have been transferred to India in 1885-86, under orders of the Comptroller-General, No. 176, dated 21st April 1886.
Total	3,87,20,761	3,92,17,851	
Municipalities	17,97,255	16,02,803	No details in this office.
LOCAL FUNDS.			:
Incorporated local funds	45,29,541	41,49,524	Decrease chiefly due to the larger payments in 1884-85 under District Road Fund.
Excluded local funds	8,24,526	5,35,605	Decrease chiefly due to the investment of Bruce Legacy in 1884-85. There are also variations under several other funds.
Total	53,54,067	46,85,129	
GRAND TOTAL ..	4,68,72,086	4,55,05,783	
Surplus	8,93,55,866	9,15,87,332	

The figures for 1885-86 are subject to modification should any further adjustment be made in the accounts of that year.

B.—PUBLIC WORKS

1.—Statement shewing the expenditure on Public Works during the year 1885-86.

* Exclusive of the pay, &c., of Roman Catholic chaplains attached to regiments, which is included in the Military Department.

Note.—The figures entered in this statement do not agree exactly with the census figures, but as the census report does not show for natives and others separately the number of persons of different denominations, the figures furnished by the Commissioners have been adopted. The latter figures exceed the census figures by 1701.
